Wow! I put all of this stuff in file folders a while back to make them
easy to find, but do you think they're easy to find? Hell, no! Anyway, I
have the old Bellcom catalogs in my hand right now.

Let's see:

Disk 049 - Basic Aids #1
Disk 113 - Atari Basic Power Pack
Disk 128 - Basic Aids #2
Disk 129 - Atari Basic Power Pack Utilities
Disk 432 - Nava's Basic Routines
Disk 628 - Extended Atari Basic

There's a few that are readily apparent from a quick perusal of the catalog.
If you'd like, I could compile a list of the entire Bellcom disk catalog.
Let me know if you're interested.

Thanks

Sorry, Momo, I won't be putting my BBS on the phone lines; not worth the
extra expense. Besides, I don't expect this bbs to get much use unless
there's a sudden and dramatic insurgence of net users longing to telnet
their way to the good ole days.

Ya know, I just happen to have a 300baud Atari pocket modem kicking around.
I'm not even sure why I keep it.

Ah well, it's not like it takes up that much space.

Hey, Scot;
Most of us would mail you a system disk if you can't get an
SIO2PC cable. Depending on location the postage is about
U$1 to U$3; you will need to decide which Dos version you
prefer based on expected usage and online study.

I dont think I could do it anyway now that I have a digital phone system.
I've noticed when I talk on the phone it switches back and forth like its
voice activated or something. Im sure that would interfere with any modem.

Road Runner High Speed Online... http://www.rr.com

I wonder if they ever tell people to kiss their rr's? Probably not.

When I was in high school, I did a science project on computers. I
remember calling around to a bunch of local industries asking for old
computer junk. An employee of DEC gave me an old acoustic coupler modem
for an old DEC PDP terminal. I don't know what ever happened to it.

I also had complete schematics for an old PDP 8... It was a monster of a
document, several hundred pages long, and they were nowhere near standard
sized pages. Of course, I couldn't make heads or tails of it.

Anyway, it's amazing what you can get if you just ask.

That's a good question. What software is used with the sio2pc cable? I would have recommended a PRO/APE cable, but I'm not sure APE unregistered allows writing to Atari. I think so, it is writing to PC from Atari I think is disabled. And who knows of a good download site? spudster seems to be busted and Holmes is gone. Maybe www.atarimania.com has DOS images.

I just tried ftp://ftp.spudster.org and downloaded FTE32g.atr, so at least
it is partially working.
It is a little difficult to navigate spudster if you don't know what you're
looking for. FTE32g.atr is the latest SpartaDOS shareware. The other
popular DOS is MyDOS 4.53. You might find both in the cth/utilities/ATR or
some such.

I use APE for DOS by Steve Tucker. I promise I'll register soon Steve if I
can ever get out of my other debts 8-). The APE package comes with the
Prosystem as well for copyprotected disks. Once you get that up and running
let me know and I'll post all my DOS's up on comp.sys.atari.binaries.
I would've recommended the 1050 2 PC cable more than the SIO2PC though. The
1050 let's you create atari disks directly from your PC whereas the SIO2PC
makes your PC emulate an Atari disk drive- that's okay if you want to load
an archived disk fast but it gets cumbersome to create disks that way,
especially if the ATR your dumping was created using EXE2ATR. Thats another
can of worms we can work out when you come to it. You'll know you've hit one
of these when you get an ATR thats smaller than actual disk. Hope this
helps.

The gal is used for bank selection, pass through cart enable, rom dissable.
There is nothing fancy, 1 chip to replace the job of many. Is easy to see
what is programmed in to it, work out the inputs, use all combinations and
see what the output is.
The MMU in the xl/xe is also a gal of some type. Someone somewhere has the
files for the Gal somewhere.
In the same cart as SDX, also came The express cart and the windows
enviroment (name?) They just programmed the gal a little between the carts.

James

1521. looking for omnimon and ultimon images for use with atari 8bit emu's

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-15 12:12:56 UTC
From: carmel_andrews@yahoo.com
Message-ID: <6ea184ba.0503150412.65afcddf@posting.google.com>
Source record: 11977

I am looking for properly functioning images for the following

Omnimon-xl/e version(david young/CDY cons.) Ultimon xl/xe(John Lawson -UK), also Latest version of mydos with ramdisk and superdos 5.1

I want to try and get these images to work with atari800win+ (latest beta)

I have having problems with my present omnimon image, it wont allow me to use dos and a separate ATR image and the game Atr image, as it crashes/locks up after the second time you enter dos (also you have to keep on holding down option... annoying)

Alternatively if anyone has an image of Qmeg, Speedy o/s or that built in monitor o/s that had a built in c simulator, that can be used on the above emu's

any help is greatly appreicated

Certainly doable, but in general it can be quite a lot of work,
especially if the GAL is configured to registered mode.

> In the same cart as SDX, also came The express cart and the windows
> enviroment (name?) They just programmed the gal a little between the carts.

I guess you mean Diamond GOS. All these carts are more or less
identical, the only difference is the bank select address:
D5Ex for SDX, D5Dx for GOS and D57x for express.

so long,

Hias

Anybody know of anyone building an Atari computer from components? (Besides Atari, of course!) Kind of a homebrew Atari compatible computer? If you do, could you point me in the right direction. Thanks!

JaYmZ

The idea is to put lot of Atari melodies into phone (not wav-s because they
take a lot of place but original musics) to hear them like mp3-s.

My Phone (Siemens M65) is able to play MIDI files. There are a few computer game midi files available on the net, so I have nice ringtones. Not only from games by the way. My absolute top-favorite ringtone is KNIGHT RIDER. When I am called you hear the famous Knight Rider tune ... every body loves it. :)

I have Nokia 6100 which also plays MIDI files, but I don't know tool which
can convert SAP files to MIDI, so I thought that it would be better to write
Java application which can play Atari music files.

1529. New Atari800Win Plus beta released

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-16 14:13:53 UTC
From: Gork <nokraygienspam@hotmail.com>
Message-ID: <113gfp989n4ggef@corp.supernews.com>
Source record: 11985

Marcin Lewandowski has apparently decided to take over working on updates
for the Atari800Win Plus emulator and the first fruits of his labors were
released on 3/8/05 with a fourth beta version:

http://atariarea.histeria.pl/PLus/index_us.htm

WooHOO!!

1530. Atari 400 video mod question (Antic: April 1984, Little Brother Grows Up)

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-16 14:49:05 UTC
From: FireflyST <fireflyst@earthlink.net>
Message-ID: <1110984545.399012.278230@o13g2000cwo.googlegroups.com>
Source record: 11986

Hi everyone,

I was wondering if anyone has performed the following modification:

http://www.atarimagazines.com/v3n1/littlebrother.html

It is a mod to generate separate video signals and audio signal. These past few weekends, Rory McMahon and I built the mod, finding out that the initial parts list is wrong, and doesn't match the schematic. We then tried the resistances on the schematic, and that didn't work. Then, we tried breadboarding it with both resistances. That didn't work.

Can anyone provide me with the correct values, or does anyone know the online whereabouts of the original author?

Thanks!

FST

On my PC (windows XP pentium IV) it doesn't work properly this version! The screen output seems to be buggy, it only refreshes the screen (ONE SCREEN) when I go to the menubar, when I leave the menu bar it refreshes one screen again and then the screen output is frozen again.

Strange,
Marius

Well,
I guess it was the "Basic Power Pack" diskette by Bob Duhamel, available in the Bellcom library and many other PD libraries. Think Umich also has this disk and er well, I have it in my collection too... As always, e-mail me if you are interested and I will return a zipped ATR to you. Besides I also remember some diskettes with USR routines (and other stuff) by a magazine called XEST, they are in my collection too...
-Andreas.

I'm using XP Pro with a P4 and an Intel mbd and am not having these
problems... How odd! I haven't even tried running the emulator at full
screen, though - I've been running it in a 672x480 window. If posting my
emulator's video settings would be helpful I'd be happy to do it.

In the Help! section of a couple of subsequent issues of Antic were
claims that the parts list and the article had some inaccuracies but
then claimed all values on the schematics were correct.

That is very kind, but I guess there is something else wrong. I have run the
third version of the emulator without any problem, and this new one won't
run very godo here. I will try to erase all settings, registery entries of
the emulator and then re-install it. Thanks for your help.

One bug I have encountered is that the "saved state" files don't work with the beta 4 version. It either crashes the emulator or simply gives a static shot of the program in question as it looked during the save. You can still hear sound, but nothing on the screen moves.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

You
> can still hear sound, but nothing on the screen moves.

Check the Performance settings. After restoring a game state the
screen refresh frequency setting seems to be set to a very large number
instead of 1.

Changing it back to 1 corrects the problem.

You don't have to fix this every time you load a state but I have had
to do it more than once per session.

It's still annoying.

Seems the bug is worse than I thought.

I'm finding that the ROM selections occasionally get changed to garbage values when a state is loaded which means one more thing to fix.

I don't know if this will help (doubt it) other than providing some
reference material but it's the only other video mod I've seen that
pulls data directly from the lum0 thru lum3 signals.

http://www.geocities.com/atarimods/8bit-ttl1.html

It's a TTL video mod by the way not composite video, chroma, luminence.

I also have some thoughts and questions for the forum.

Looking at the "Litte Brother" schematic I'm confused by the resistance
values chosen, or rather the order of choice.

Lum0 thru Lum3 would seem to imply that luminence values are four bits
of binary encoded information (my speculation). So why wouldn't the
high order bit, if you will, be connected through the lowest value
resistor, yielding a higher voltage at that point?

The resistors chosen double the value of one another, 4.7K -> 9.1K ->
18K -> 36K. These are connected to Lum2, Lum1, Lum0, Lum3,
respectively. Wouldn't it make more sense that they be connected to
Lum3, Lum2, Lum1, Lum0, respectively, Lum3 being high order and Lum0
being low order?

Can someone tell me if Lum0 thru Lum3 work as I speculated? or are the
designations just arbitrary?

1554. EPROM burner suggestions for 8-bit computer and consoles?

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-18 05:07:31 UTC
From: Slor <slor@comcast.net>
Message-ID: <Xns961D11F79062emuslor@130.133.1.4>
Source record: 11861

I'd like to have the ability to burn EPROMS such as those found in 8-bit Atari cartridges and various 8-bit consoles (the older ones like Atari 2600, coleco, intellivision, etc.). Anyone here have a recommendation on a decent burner that would suffice for most of the older systems without all the bells and whistles that make the more advanced systems overly costly? Keep in mind that I'm new to this sort of thing but that I'd like work on developing some cartridge-based homebrews.

Thanks!

Oh yeah - it would be a huge bonus if the burner would support the type of
chips used for the OS and BASIC in the Atari 8-bits...

From: "kafer77@ameritech.net" <kafer77@ameritech.net>
Message-ID: <1111124539.280875.125010@z14g2000cwz.googlegroups.com>
Source record: 11863

I purchased this off Ebay - "As-Is" - so I guess I can't complain. Although the seller said it powered on "OK!" Nevertheless, I could use some help diagnosing the problem. The power supply that accompanied it is Model CA017964 rated as 9V AC/50VA rating. Within just a minute or so after plugging in the powersupply and then turning on the driver (the led does light up), the rear voltage regulator nearest the power supply socket (12 volt) turns the heat sink much more than just warm - closer to hot!! At any rate, the drive does nothing either when the DOS floppy is inseted and the dooor closed OR when my working 800XL is turned on. Upon close inspection, I noted that two (2) of the 4 stepper motor in-line connectors were inserted backwards - meaning the #1 pin on the connector was at the opposite end from the #1 pin on the appropriate row of pins. It's clear to me that someone removed the drive and put things back together wrong. One of the 3 large capacitors is a different brand/voltage from the other 2, etc. - like a 25 volt rating versus 35 volt for the other 2.

So here are my requests: 1) do any of you technicians out there have the schematic/diagram for the 1050 I could buy and 2) does anyone have any ideas where to start in any effort to track down the cause for the apparent short??

Thanks
Chicago Pete

The Needham's EMP-11 is a good entry level programmer with commercial
support. http://www.needhams.com/

If you dont mind having a more do-it-yourself type programmer, you
can get a 'Willem' programmer off eBay for around $40 that does all the
eprom types you would need.

Based purely on the price difference, I'd probably go for the Willem. What
sort of "do-it-yourself" things are we talking about with this one?

A very similar resistor network is found in the Atari 800XL schematics.
Here LUM3 is connected by 4.7K, LUM2 by 9.1K, LUM1 by 18K, LUM0 by 36K.
The luminance signal is "pulled low" by a diode and 750 ohm by the CSYNC
signal, responsible for the "back and front porch" of the horizontal and
vertical sync.

> Can someone tell me if Lum0 thru Lum3 work as I speculated? or are the
> designations just arbitrary?

According to the 800XL schematics, their naming is well-choosen. LUM0 is
pin 31, LUM1 is pin 22, LUM2 is pin 23, LUM3 is pin 24 on the GTIA.
There is an additional CMOS 4050 driver between GTIA and the resistor
network to decouple the two.

Greetings,
Thomas

All I had to offer is a "home made" version I did based on one VIA and a
couple of up/down counters (4516's) to address the address bus of the
EPROM, plus some additional stuff to generate the voltages. I could
print down the schematics. You'd still have to built it, though.

> Oh yeah - it would be a huge bonus if the burner would support the type of
> chips used for the OS and BASIC in the Atari 8-bits...

I wasn't able to find an EPROM that is suitable for the Basic ROM, this
seems to be a non-standard thing. A tiny adapter in the middle worked
fine for my 8-bit, though, when replacing the Rev-B Basic with the Rev-C
Basic and a 2764 EPROM. The Os rom is a standard 27128 EPROM that is
easy to find, though.

So long,
Thomas

Thanks Thomas.

That's what I would have thought except you lost me with the "back and front porch" stuff.

I don't really understand electronics and I can't completely read schematics. I was just using logic with the Lum0 thru Lum3 stuff.

Now I'm not so sure about my speculation. I just found my Atari 800 schematic. (Actually I just remembered I own the 400/800 Technical Reference Manual). This schematic has the resistors paired as they are in the Little Brother article.

LM0 --> 18K ;designated LM instead of LUM in this schematic.
LM1 --> 9.1K
LM2 --> 4.7K
LM3 --> 36K

Sorry, I probably just confused the entire issue for everyone. I should have kept my mouth shut (er, or my fingers off the keyboard).

Hey, Pete;
Check the resistance in each direction of the four (4) diodes in
the
rear and left of the large silo like capacitors; ohms should be
different
one way than the other. Seems like they are numbered consecutive
like C18, C19... and arranged two by two (= =). Any measuring
the same in both directions are probably bad and not major
difficult to replace.

To add yet more confusion, in the 800 schematic pin 31 is LUM3, pin 24
is LUM 2, pin 23 is LUM1, and pin 22 is LUM0 of the CTIA, the
predecessor of the GTIA.

The GTIA of the day was pin compatible. I had my CTIA and OS ROMs
upgraded around 1983.

If I swap the data-in and data-out lines to the
SIO2PC, can I use this with the 1050 drive instead
of hooking to the 800XL ?? Will SIO2PC software work,
or will I need different software ??

Thanks in advance,

By do-it-yourself I mean there is nobody to call if it does not work
the way you expect. Commercial device programmers typically include technical
support from an engineer if the hardware or algorithm does not program a
device correctly.

The support and software updates are mostly what you are paying for. A
programmer like the EMP-11 is very simple, probably no more complex than the Willem
programmer internally.

I believe the Atari supplies the power for the SIO2PC cable. 1050-2-PC cables have independent power. If you had the latter then you could switch the wiring as you described but not reverse. I'm not 100% sure though.

Don't know which software works with 1050-2-PC other than APE and APE PRO.

Hello Thomas-

I'd be interested in your burner's schematics if you get a few
"takers" and have a chance to set it down. And your 28->24 pin
adapter, please -- I first ran across one of those in a "Jiffy Dos"
eprom for the C64 (years ago). The Rev "C" Basic upgrade cried out
for this type adapter.

1574. Atari 800 to PC data transfer....

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-19 05:58:47 UTC
From: Sid Pacman <8-bitter@atari.old.folks.home>
Message-ID: <Pine.GSO.4.61.0503182354370.636@furyy1>
Source record: 11881

On Fri, 25 Feb 2005 at 20:56:39 GMT, Russ Gilbert scribbled:
->I think we generated so much noise that the OP [original poster]
->has departed. ...

I've been too busy to reply to this until now, but I saw these postings when they were current. Unfortunately, the OP was probably long gone before anybody mentioned MyUtil.

->I'll give Paypal $10 to anyone who can prove they read or wrote a
->90k Atari disk on a modern PC, using modern 5.25" drive, 360k or
->1.2meg, and *not* using a special controller.

I added the emphasis for, well, emphasis. I'd like to agree with you, but there may be more to the story. Some years ago somebody loaned me a utility program which I ran on my "PC" (what was called an "IBM clone" in the pre-Windoze age) and it allowed the 5.25" drive to read 200 different CP/M formats. At the time I was trying to read a 5.25" floppy that had supposedly been recorded back in the '80s on a Kaypro, which was another brand of 8-bits.

I never succeeded in reading the disk, which I concluded was because the disk was blank. But there's also a possibility the Kaypro disk might not have been formatted at the 180K (per side) level, or 360K total, which is as low as my "modern" (as you call it) 1.2 meg 5.25" drive goes (as you mention above).

Anyway, if a program like that could do the same sort of thing that the MyUtil program does, then who knows how many other programs might be out there, or that could be written? I'm hesitant to say absolutely that it can't be done, but as far as I'm aware, you're right: Reading a "single-density" (90K per side) Atari floppy can't be done with a 360K-and-up drive on an "IBM clone" via programming alone.

->Charles Marslett wrote 'myutil' to read and write Atari dble dens
->disks, using MyDOS.

It's amazing that after the original posting several WEEKS went by without anybody ever mentioning MyUtil. Apparently many of today's readers of this NG are totally unaware of it, or even the concept behind it. Ten years ago it was the MAJOR thing talked about on this NG for this purpose.

->You can use a 1.2 meg 5.25", but it requires telling the controller
->to use dbl and not high density, you have to use your own machine
->language routines, like Marslett did.

Well, I just use MyUtil. It's crude and it makes the drive growl
as if it doesn't like doing it, but it works.

->It is correct that you have to use a virgin dble dens floppy,

"Virgin" meaning freshly-formatted, but along with that it's
important to have the files be freshly-written onto that disk. As
I found out early on, MyUtil can't handle well (if at all) files
that are in disconnected pieces in various places on the disk.

->But I ramble.

No problem!

P.S. Does anybody here remember the olden days, back in the early
'80s, when even Atari, Commodore, and other 8-bits were called
"PC's"?! Then IBM put out its "home" computer and the term "PC"
stuck like glue to the IBM model and its clones.

The problem is with the disk drive controller cards. The chip used in all the early ones was able to read/write single density but not all the manufacturers implemented it on their clone cards. The original true IBM cards for the 8088 could do it but it was a crap shoot with other controllers.

Then everyone went to the "all features in a couple of big chips" type mother boards with built in floppy controller. Same story with some suppliers implementing the ability to do single density, some not.

It probably would have made sense to make a list of who does and who doesn't support single densisty but most of the people asking the questions are kind of drive by posters. IBM motherboards change so fast it would be a constant battle keeping the list of known good MBs up to date. I don't even have a set up computer that has an open old style slot right now and the last two I put together for other people had no old style slots at all.

I believe the original thread became disjointed. There were replies discussing MyUtil and its two aliases, Util and DskUtil. There was also another utility called Atario. (I think that's the name). All of these can read double density (DD) Atari disks on both 360KB and 1.2MB drives. These utilites access files on Atari disks.

The combination of Anadisk 2.07 and DEANA (DE-ANAdisk) can read single density, SD, Atari disks, using PC drives. Supposedly, Andadisk 2.06 works better with 1.2MB drives. This combo worked very well for me but others have had more mixed results. This combo does not read Atari disk files but rather produces XFormer images. Anadisk produces a dump file. DEANA converts it to an XFormer image. Other utilities are needed to extract the files.

The modern utility to use for DD disks is WriteATR which can read, write, and format and very quickly. This utility uses ATR images. Again other utilities are needed to extract files from the images. (I prefer MakeATR).

Virgin floppies are not needed if you have a means to bulk erase. You can use a video tape eraser or a powerful static magnet.

The best means to port data to a PC is with an SIO2PC cable and either APE or SIO2PC software. Using this combination the PC emulates an Atari disk drive. They can do a lot more.

I still use WriteATR to create quick Atari disks from ATRs when I don't want to go to the trouble of starting up all the Atari gear and run a sector copier.

I no longer use any of the other disk utilities.

Be careful changing those connectors. I know at least 1 of them is supposed
to be backwards! If you still need help, I'll open a 1050.

Here's the website for the guy who made mine. I've got a standard sio2pc and
a 1050toPC cable from him. Very reasonable price and the 1050toPC cable does
not require external voltage.

Got my SIO2PC cable from the same person.

Learned I needed the 2-chip designed SIO2PC (for compatibility with my
ATR8000) and Artur built it, no extra charge.

He does good work. Tucks the circuit inside the SIO connector's shell.

He does sound very competent and a good guy.
I have decided though that I can just use the
SIO-2-PC that I have, and just hook it to the
system complete. I'd rather not have a bunch
of disks anyway, which is what I'd have if I
get the 1050-2-PC cable. Why have all of those
floppies laying around. I have the INSTA-DOS
cart, so there is no reason to think I won't
have space on the actuakl disk for the programs
needed to operate the Atari side of the SIO-2-PC.

Not sure if you'll find any, but if
someone has a surplus of BetaMax video
cases or racks, you might be able to
get a few cheap. They're about the same
size as a game cart.

I was wondering if anybody had tried to cluster (parallel process) with the Atari 8-bits?

I was checking out this site, http://exodus.physics.ucla.edu/appleseed/appleseed.html about Mac clusters and I began thinking about my little ole 8-bits. I know that 8-bits can be networked, so why not clustered?

All it would really take to cluster the 8-bits would be some cool software.

Anybody tried it? Considered it? Wanna try it? Wanna consider it?

Can it be done? Should it be done? Will it be done?

Let's do it!

8 Track racks work well. At one point I took a shoe box, flipped it over and
cut out slots. I nice little homebrew rack for my most used carts.
Mo

1598. Why do I need a Translator Disk for my 800 XL ?

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-20 06:12:05 UTC
From: "kafer77@ameritech.net" <kafer77@ameritech.net>
Message-ID: <1111299125.275203.33160@f14g2000cwb.googlegroups.com>
Source record: 11905

I have an Atari 800XL that I recently purchased off E-Bay. The 810 drive that came with it was dead. So I tracked down an INDUS GT drive. With the 800XL came quite a few disks - some are the original commercially sold disks and most are copies with 4 or 5 games on a disk.

1) I have one disk labled "translator". As I understand it, a "translator" disk is needed with an 800XL. Right?

QUESTION - WHY is this necessary? What does the translator do??

2) Even the couple of original commercially sold game disks will only load in successfully once in a while. And, it seems that only if I load the "translator" first do I have much of a chance that the programs will actually successfully load/run.

QUESTION - Can it be that the real problem is that the drive is out of alignment?? If yes, what can be done to correct things??

Sounds like the original question is now academic, but as goes the
interface, anyone who contemplates using ProSystem as well as APE
should check out the AtariMax auto-sensing interface. It
automatically switches between APE mode and ProSys mode depending on
the software used. It draws its power from the Atari computer SIO +5V
line, so no external power supply is required. It is slickest
interface I've seen/used -- but of course, that's my opinion. I've
also used it (and other 1-chip interfaces) successfully with my Percom
and the ATR8000, although I have heard that both these drive systems
can have problems with some interfaces.

I've got a mixture of Commodore 1084 and 1084S Monitors as well as a few Amiga Monitors! These monitors support Chroma/Luma as well as Composite Video. They all support RGB for the Amiga, ST and I think the Jaguar. What I need are RGB Cables with a 13 Pin Din for the ST on one end and a 9 pin connector for RGB on the other end. As well as an RCA jack for sound. E-Mail if interested. Vendors welcome. Thanx! ===Ben===

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

While it might be 'cool', it would be pretty worthless.. As far as raw
computing power goes.

I once clustered a roomfull of 486's thinking id have a nice powerhouse
to play with.. But due to the overhead and the power differences in
newer technology, the P5 that was the 'host' actually ran faster....

Rather dissapointing..

J1 is the only jack mounted in the offset style in two of my drives,
BUT if you turned on the drive with it lined up with the others then
your track zero sensor ($25 - B&C) is now fried and not working. The
head should step in one notch and then sail to the very outside of the
disk when the drive is powered up. Those drives with bad track zero
sensors will just step in, and in, and in, until the head is sitting at
the inside of the disk.
B&C - http://www.myatari.com

I suspect that you have other problems as well, see this thread on
another 'hot' 1050.
http://groups-beta.google.com/group/comp.sys.atari.8bit/browse_thread/thread/e84217c21e379
d4f/72607aeed765e502#72607aeed765e502

You won't find anyone better at 1050 diagnostics via the web than Rick
Cortese so you might want to also search the group using his name and
1050 to see what he has to say on it. Paul Alhart still repairs 1050
drives as well, look for him too.

Don't feel bad as I did it too and lost my track zero sensor as well.
Now when I open a 'new to me' 1050, I draw a line across the inside top
of those jacks with a magic marker to mark them such that I never make
that mistake again. I swear someone once posted a picture of those
jacks in this group but I could not find it. I'm also thinking that
some drives have two jacks mounted in the offset style but I could be
misremembering things again.

I had Redmond Cable, here in Redmond, WA make me one for my Commodore 1084 to connect to the Atari ST with attached RCA cable to connect to the monitor. It cost about $25.

This is the only way you are going to get one as these are extremely rare, since you are trying to connect an Atari to a Commodore monitor!

Tim

Yeah, but all of the Atari's would be running at the same speed. So the
speedup would be noticeable. Secondly, there wouldn't be that much
overhead. If you interfaced the Atari's via the parallel port and if the
software were on rom, it would be one kick butt little cluster.

I'm thinking more along the lines of app's or games that are specifically
written to take advantage of the parallel processing capabilities.

but you really wouldn't need to have the software on rom. The drivers
could be loaded from disk and occupy a very small portion of ram on each
machine. If the software were intelligent enough to divide the tasks among
the Atari's, a significant performance boost could be realized. Secondly,
by sharing the processing load among several processors and system memories,
much more sophisticated applications and games would be possible.

No it uses a 9VAC 500Ma wallwort
Those 9volt bricks put out 30 to 40 amps and will fry the recorder! The
Atari original actually says "for use with 1010 recorder" on it.

In case you don't want to skim thru the billion page faq, I'll be kind
enough to spend 10 seconds answering you:

The translator is needed for a handful of programs (not too many) that were
originally designed on the Atari 800.
The 800xl has some differences....the translator makes it emulate [per se]
the 800 - so the games will run.

I remember I needed the translator for shamus....um....alley cat...I don't
think I needed the xlator for any games I really cared for!

I think I saw something in the news 3 to 5 months ago that the University
of Washington (I think) was going to/had clustered 100 or so Commodore
8-bits that had been donated to them ages ago.

Can't find anything immediately on Google.

Do you remember what they said they were doing with them?

I remember hearing some old news about Microsoft's new operating system,
Longhorn, having some radical networking kind of thingy. Were they going
to include the ability to cluster? I saw in another forum that some
Windows user was wanting to cluster his XP machines but was informed that it
was not possible.

Source record: 11920

I'm trying to track down a copy of MyDos 3.16b. I've contacted the
author, but he no longer has this version. This is a *very specific*
version of MyDos which has code to access an ATR8000 hard drive. It
is probably contained as a seperate driver file, much like the RS232
driver. I've been in contact with several other ATR8000 owners, but
so far, no luck. I have lost the address of the person that I got my
ATR's from, but maybe I'll get lucky and he will see this post. But
if anyone has a an ATR8000, could they please check and see if they
have the 3.16b? I would love to see this old HD system brought back
to "life."
Thanks,
Larry

1614. Adaptec HD Enclosure

(FWIW) I ran across something today that might be useful to someone needing a HD enclosure for their Atari IDE hard drive system. CompUSA has an Adaptec USB 2.0, 3-1/2" HD enclosure on special this week for $29.99 (no rebate required!) This looks to be a very high-quality enclosure -- compact aluminum body with an external +5/+12 Volt (switching) power supply. Of course, it is USB 2.0, so some minor adaption is needed to use it with a ribbon cable, but that is how I plan to use it. It is listed at their web site. I bought one today and have already mounted an IDE HD in it. Tomorrow, I'll format it and set up the HD partitions, etc.

What exactly did you have in mind ? It sounds like a solution in
desperate need of a problem to me. How about a back-of-the-envelope
best-case calculation:

The 6502 runs at ~1.8MHz, each instruction takes ~2 clocks IIRC for an
average of 900k instructions/sec. Say you cluster even 50 8-bits, you
end up with ~50M insns/sec (without any overhead subtracted for
communication and coherence. Let's say you use a relatively efficient
protocol, eg: Block Synchronous Parallel (again, IIRC). That had about
25% overhead on typical tasks when I was at college about 10 years ago.)
So we're up to about 37 million insns/sec.

A modern PC (hell, even an old one) will run a hell of a lot faster,
they're superscalar and multiple issue. Modern chips approach 1
insn/clock, and they're clocked at between 2-3 thousand million
clocks/second, or (on average) 67 times faster. And you can write code
that does:

```
for (int i=0; i<N; i++)
{
// do stuff dependent on 'i'
}
```

... and expect stuff to be done at top speed. With clusters you have to
maintain thread pools, work queues, pending-data management, flow
analysis, the whole shebang... Even then there is code that just doesn't
parallelise well. The simple loop above will bring a cluster to its
knees and the cluster will collectively run at the speed of the one
machine it's sent to.

So, conclusion: if you're thinking about doing this because it'd be a cool thing to do (and that's it), all the more power to your elbow my friend. At the very least, exploring parallel processing is a hugely educational topic and it continues the good-old 8-bit tradition of pushing the envelope.

If however, you're doing this because you think it might be generally useful, can I have some of what you're smoking ? Sounds like it could be good stuff [grin]

Simon.

Hmm... I thought that someone would jump right on this answer, but it
didn't work out that way. So I'll "tiptoe" on the reply. :-)

I'm quite sure that my original 1010 came with the "standard" 9VAC, 31
VA power supply. But in addition, why would a PS with a higher
current rating "fry" the 1010? Perhaps you're thinking of the
problems of higher voltages (or even AC vs. DC)? If one came with a
small wall-wart, it was likely a cost decision.

My understanding has always been that this issue is quite analagous to
a (DC)battery -- a "D" and a "AAA" both supply about 1.5 volts when
new, but the "D" has a lot more capacity. Same with an AC PS -- if
the device doesn't draw much current, it doesn't draw much current.
The problems come if a device tries to draw more current than the PS
can comfortably produce.

If I'm wrong here, someone please (gently) enlighten me.

1617. Ice Queen in Eternal Dagger question

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-21 14:26:40 UTC
From: dpurves <dpurves@gmail.com>
Message-ID: <1111415200.100797.305730@o13g2000cwo.googlegroups.com>
Source record: 11924

Yesterday I completed Eternal Dagger for the second time, the first being many years ago on my old Atari 800 XL. Both that and Wizard's Crown are two of my all time favorite games, but there is one thing that has bothered me for almost two decades now. In the notes that came with the game they talk about an Ice Queen, who appears to travelers as a sort of damsel in distress, and if I remember correctly she was supposed to have some inter-dimensional travel device. I have searched the world of Eternal Dagger far and wide, and have found no trace of her. Also, to my knowledge, she is never actually mentioned in the game itself. Does she exist? From my searching it looks like no one else has found her either. Was she a planned character, that got into the instruction book but never actually got programmed into the game? Or was the whole thing just a tease, and they never had any actual intention to include her at all. If anyone knows, I'd love to hear.

I'm still frustrated that they never continued this excellent series, and that the reward for saving the world from a demon invasion is to be stuck in a forest in some other dimension, apparently forever.

Can anyone recommend a good supplier for the various EPROMs? I've found
them places, but I don't have a basis to judge reasonable pricing.

Also, is there any place out there to get empty 8-bit cartridge shells?

2ï¿½

Buy yourself an UV EPROM eraser. I think I paid ~$35 for mine years ago
and it was worth every penny. When making my own cart software it took
4-5 tries before I got it right and being able to erase my mistakes
saved the price of EPROMS at the time.

You will also find a lot of junk equipment and low cost used EPROMs.
Just a for instance, I think the early IBM PC with BASIC had about eight
or nine 8kx8 EPROMS. Most of ones you use will either be 8kx8 or 16kx8.

There were several blank carts you could buy. I think B&C in their
current version may have some and you can always count on Best.

For the Atari 800 carts I have these cart holders that are square, hold four cartidges, and can interlock with another cart holder just like it. I have four of theser stacked this way. I display my favorite carts, the rest are stored in a box somewhere. :)

As for Atari Jaguar carts... a rack for holding Audio cassettes works.

To make something like that work on for the 8-bit carts you would need to remove a panel between slots... It would probably take two slots to loosely hold the Atari 8-bit carts.

Okay I may have exagerated the part about frying the recorder, but when it's
designed to work on 500ma it would seem logical that 40amps wouldn't be good
for it.Maybe it would be good for it, I'm not an electrical engineer. But I
do know that both of the units I have both came with 500ma wallworts marked
"for atari 1010 recorder" on it. Who knows maybe either/or would be fine.
;-)
I have a 1020 plotter that needs an adapter, the FAQ says its the same as
the 400/800 9V 30-40 amps AC. But from my research I've read that its the
same unit as the Radio Shack CGP-115 in different clothing. However the
CGP-115 I have has an odd 9.8Volt 1.2 amp power brick. I havent plugged it
into anything yet until Im positive about which it is. It's like an enigma
wrapped in a riddle...

A power supply will only supply as much current as the load requires. So it doesn't matter what the max current rating is (although some regulated power supplies require a minimum load in order that the regulators will function). As long as the voltage is correct, and the power supply's current rating is at least equal to the expected load, there won't be a problem.

Actually if the load pulls the max current from the supply all the time it will shorten the life of the supply, and generate lots of heat in the process.

Thanks for the suggestion.
Yes, I'm familiar with Mathy's files, but 3.16 is not the same as
3.16b.
As best I can determine, the versions that mention "ATR8000" or
"ATR8500" refer to the ATR's RS232 functions. The HD functions are
quite different. Here's the way it works (abbreviated):
1) User establishes a CP/M Hard Drive using the ATR8000/8500 and
appropriate CP/M HD setup files. (The Atari is just a terminal for
CP/M.)
2) User assigns one CP/M HD partition to be used by the Atari.
3) User boots a floppy disk with MyDos 3.16b (can't boot directly from
the HD).
4) If user lacks 3.16b there is no way for the Atari to "see" the
Atari partition on the HD.

You people just have no imagination!

I was thinking more along the lines of task sharing. For example: One Atari 8-bit could be responsible rendering graphics, taking care of user input, controlling gameplay while another Atari 8-bit could be handling sound effects and music.

The cluster wouldn't require that much overhead. There would be a "real" use in a gaming environment.

You just have no imagination!

What am I smoking? I'm smoking possibility!!!

The practical possibilities are virtually unlimited and then, limited only to your imagination.

For example: In a game... You could farm out tasks that are taxing to the host Atari to other Atari's. For example, sound effects and music could be handled by a second Atari. The overhead would be minimal because the host Atari would only need to tell the clustered machines what sounds to produce or generate. The actual work of producing the sound could be handled by another machine... allowing the host to carry on with other tasks.

That's just one example. I could come up with a whole host of other possibilities but the chief use of Atari 8-bit computers these days is games... The gaming possibilities for clustered Atari's is virtually limitless.

Think about the possibilities for game graphics... A second Atari computer could be the intermediary between the host Atari and a disk drive... The host computer, instead of pulling graphic images directly from the disk, could retrieve graphics from a second atari that alters images on the fly. In essence, you could have games that never actually look the same... consequently, they would never play the same because everytime you played the game, it would be different. Clustering the Atari could help to alleviate the "boredom" factor...

There's so much that could be done, if you only dare to imagine!!!

Hey, Doc, did you ever work in radio? Blackburn Group might be hiring...
the only qualification is a complete and total lack of imagination. LOL!

It's not that you get more speed from an Atari 8-bit cluster, it's more
possibility!!! There's only so much you can do on a little 6502
processor... but if you break down the tasks and split them among multiple
Atari computers... the Atari's, working in tandem, could do surprising
things.

Having knowledge is good, some even say that knowledge brings power. But
having knowledge and the imagination to use that knowledge in creative new
ways... Well, that's true power!!!

> Speaking of cluster, anyone try to make a dual processor setup for the
> 8-bit? What if a bunch of 6502's were piggy backed on a Atari motherboard?

Yeah, I thought about it... But I discounted the idea as malarkey...

Hmm. My imagination is (http://axe.gornall.net/) just fine. Perhaps I was imagining a "cluster" of more than 2 machines! If you're going to run a special-case, then the s/w overhead can indeed be lower, but you end up writing the entire operating environment for every special case. With generalism comes overhead, trust me.

My position is that once you're in the realm of having to write custom s/w, you can question whether it needs to be another 8-bit, or whether you could add on a more powerful co-processor. Hence AXE.

Cheers,

Simon.

1636. Re: Atari 8-bit Cluster

Source record: 11942

How right you are. However, you can't beat the cost of multiple Atari 8-bits. Adding a second processor in the form of something like the AXE, introduces significantly more cost.

I would hazard to guess that most Atari 8-bit users probably have a second and third Atari 8-bit laying around.

Another idea I had was for games like PacMan where users could play two distinct levels simultaneously. For example, in a PacMan style game, a user could have two Atari 8-bit computers running in tandem, each with their own monitor. Instead of your PacMan dude jumping to the other side of the screen when entering a side portal as current PacMan games do. The PacMan dude would instantly jump to the next level on the second Atari 8-bit and monitor.

Or, in games that have users explore virtual worlds, a second or third Atari could be busy creating virtual worlds for the game while your primary Atari is concerned only with your interaction in the created virtual world.

The possibilities are virtually limitless.

> predecessor of the GTIA.

> The GTIA of the day was pin compatible. I had my CTIA and OS ROMs
> upgraded around 1983.

Let's forget about the naming for the time being. Just make sure to
connect the right resistors to the right pins. (-; I would guess that
in this respect both networks are identically.

The "front and back porch" are modulations of the luminacity signal
that are required for the TV (or the monitor) to identify the horizontal
and vertical sync. They are generated by the CSYNC pin. Should be connected
as indicated - the internal workings shouldn't matter.

So long,
Thomas

> you could add on a more powerful co-processor. Hence AXE.

This is true, but a more powerful co-processor adds substantially more cost. With a cluster, you're working with what you have.

I don't think that an MPI for the Atari would add too much overhead. The Message Passing Interface is pretty much standardized. It would just be a matter of adapting the MPI to the Atari.

The biggest problem that I could see with clustering the Atari's is network latency. but that shouldn't even be much of a problem because Atari computers are slow to begin with. So, any latency in moving data back and forth between the Atari's should be acceptable within the Atari environment.

To go one better, why not use a PC in your Atari cluster for more processing power? If you're using something like the SIO2PC interface, you're already sharing most of the PC's resources with the Atari... Adding the ability to share processor resources would seem the next logical step. Wouldn't it?

I dunno, I think sticking with Atari 8-bits is the most practical course. Why?

1) You're working with equipment you already have and are familiar with so cost is minimised.

2) You're clustering identical platforms... So you gain the advantage of consistency among host & nodes.

3) Development time is decreased because the only thing to learn is the MPI.

I dunno, it just seems like something that would be alot of fun to do... And there are "real" benefits to be realized, if you want to realize them.

I don't remember?? BUT I could have sworn there was an Atari version of Frogger! I think I had copied it from my friend's carts and used to play it using the Impersonator dummy cart. So... I seem to remember playing this game and had been looking for it on the net for quite some time but have not found it anywhere!

I don't remember who it was really by. I thought it was Atari but maybe I am wrong!

I will have to check the disks someday and see if I still have it. However, I don't know if it can be converted from the dummy cart format to a raw format for use with the emulator?

Thanks for the info, though...

Check out atarimania.com.

This is apparently an early Frogger prototype, before John Harris's code:

http://www.atarimania.com/detail_soft.php?MENU=8&VERSION_ID=12181

This is, of course, the classic version by John Harris:

http://www.atarimania.com/detail_soft.php?MENU=8&VERSION_ID=6780

And this is the cartridge version put out by Parker Bros:

http://www.atarimania.com/detail_soft.php?MENU=8&VERSION_ID=5990

Hi! Anyone know where I can get some accurate schematics for one of the
Atari 8 bit computers? Thanks!

Sam's Photofact has them. If I remember.
(130xe and maybe 800xl schematics.)

Rob,

I looks like Indiana has decided it wants
its men's basketball program to mirror its
football program. They are retaining
coach Davis I understand hardly anyone
showed up to see them lose to Vanderbilt
in the first round of the NIT. And Davis gets
a $300,000 bonus in June.

Plenty of imagination. Just not for what you are doing. Nevertheless,
wiether my pet project or not, it still sounded interesting.
And yes I have worked in radio, both FM and Shortwave. Would gladly do
it again.

Sounds cool indeed. I have really enjoyed seeing the demos of the 14 and
16 mhz speedups that have been mentioned on Atari Age lately. Truly
amazing.

This reminds me of my Samsung portable modem (way back when 2400 was fast). The original 9V adapter was DOA. I phoned them, they sent another. It measured 20V. I sent it back, told them I needed 9V. The new one measured 20V. I sent it back and told them I needed 9V. The new one measured 12V. I said "Close enough!"

Every unit was marked 9V...

Ben

Hi,

I was the one who was trying to contact Ray Goldman about his DD3, and if
it could possibly be put into the freeware zone.

If I remember right, his original disks are somewhere at his parents
home, in Colorado, but doesn't have access to them, with his busy life
now adays.

I was looking for ATR images of the original disks as mine got destroyed
by sitting in a extemely hot garage in Utah. If you could e-mail the ATR
images to my e-mail, I would really appreicate it!

>to your imagination.

Here's using some imagination: why bother with doing all the programming,
etc.. required to do parallel processing? Why not just run your program on
two computers side by side? Have the user start each at the same time, or
in the case of music on one, and graphics on the other it wouldn't really
matter.

I recall hearing about a sound demo that did exactly this, producing a
stereo sound demo using two computers.

>Think about the possibilities for game graphics... A second Atari computer
>could be the intermediary between the host Atari and a disk drive... The
>host computer, instead of pulling graphic images directly from the disk,

Sort of like getting data from a bank switching cartridge?

>could retrieve graphics from a second atari that alters images on the fly.

Why would it do that? What could it possibly do to the images that
couldn't be done on the main Atari?

No, I'm sorry, I think you're letting your enthusiasm run away with itself.

The SIO speed is nowhere near enough to supply graphics - it's what, 19200 baud ? Even if you go for the enhanced-speed (hyper speed ?) SIO (which takes a chunk out of your XL's processing time), you're up to ~52 Kbaud (I think). That's about 6.5 KBytes/second or ~1 frame/second after overhead costs, assuming a 4k screen-size. It's barely enough for audio, let alone video.

Even if you go to the parallel bus, you get ~100KBytes/sec if you max out the XL/XE (ie: it's doing nothing else). That's a 25fps display with a 4k screen. You sort of lose the advantage of parallel processing if the machine providing the graphics completely saturates the machine showing them - and if the machine providing the graphics is maxed out as well (just on the transfer of data), it has no time to actually create graphics in the first place!

I looked into using the parallel port as a video-out device for AXE - it would have saved me digitising the screen display via the composite port. I concluded it was too slow to transfer the screen RAM in real-time. Pity though.

The best hope for parallel processing would be complicated game logic. Here you could offload some of the problem to the slave computer(s) so long as the data you need to transfer is not too large. Good examples might be chess programs, or mandelbrot-generator or similar. I think you'd need 3 or 4 computers before you saw a benefit though, because there is quite a bit of overhead on the host computer in co-ordinating all the work-packets to go out to the slaves.

The sound example is a good one as well - there's no back-channel of data from the slave to the host then, so you could download anything you needed at the start (to prevent delays during the game/whatever) and just send manipulation commands - again small data transfers.

At the end of the day, you can *do* more *with* more, but you are limited by the bandwidth of the node connectivity and the speed of the CPU.

Simon.

1657. 14 & 16 mhz demos

No problem. What it boils down to, there are some guys in Europe that made
a fully compatible speed up mod on their Ataris, and they did some awesome
demos like Black, Black2, Vengence and others that they were kind enough to
make movie files of so everyone without 16 mhz Atari 8-bits could see.

The topic on Atari Age is titled "Atari 8-bit @ 14 mhz", and the direct
link... forgive me if I mistype this since I am transposing from a Mac OSX
screen to my Atari 800 keyboard...

http://www.atariage.com/forums/viewtopic.php?t=66045

I believe it is at least close to that link. Amazing demos. Let me know
what you think of them.

>
> So long,
> Thomas

That simplifies things.

Using pinouts only

GTIA -- Resistor
Pin --- Value

22 ---> 18K
23 ---> 9.1K
24 ---> 4.7K
31 ---> 36K

The connection between GTIA pinouts and resistors are indeed the same on all schematics, 800, 800XL, and Little Brother article.

The luminence labels do differ between 800 and 800XL but the pinouts match (as you indicated).

Don't know how to fix FireflyST's problem, though.

: The topic on Atari Age is titled "Atari 8-bit @ 14 mhz", and the
direct
: link... forgive me if I mistype this since I am transposing from a Mac
OSX
: screen to my Atari 800 keyboard...
:
: http://www.atariage.com/forums/viewtopic.php?t=66045
:
: I believe it is at least close to that link. Amazing demos. Let me
know
: what you think of them.

The link is great, but the files can't be viewed
right now. I need to receive my new 80 GB hard drive
and then I can install a DivX viewer or PowerDVD.
Until then I save links and shortcut to the page
where they are and let you know later. Drive should
be here in a day or two. Thanks for the link.

Kinda, not really, though... Willems have a lot of trouble with 2716s
and 2732s... no matter what the "supported chips" list tells you. I
know from first-hand experience. Even after bulding adaptors and
stuff, more trouble than it's worth.

Also, the power regulator design is shoddy. I suspect that's the cause
of a lot of the Willem's problems.

Keep an eye out on eBay, and you'll be able to snag a decent programmer
for not much more than a Willem.

Later,
Rob

I use an ETT SPEP PLUS programmer. I got it from eBay
for $50 plus s&h. Does up to 8 Mbit and some flash memory.
Try to find one, and if it needs software, let me know,
I'll email you the program.

Last-modified: February 15, 2005

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

>P.S. Does anybody here remember the olden days, back in the early
>'80s, when even Atari, Commodore, and other 8-bits were called
>"PC's"?! Then IBM put out its "home" computer and the term "PC"
>stuck like glue to the IBM model and its clones.

Yes, I remember that like it was yesterday. I do not think even acetone could pry the words IBM PC apart. It is okay with me. I will just stick to my Atari computers since that time.

I remember some type of rack coming out. At that time I did not have enough to fill it, so I passed on it. I store mine in a covered box. They all still fine except the Gorf cart.

>drive that came with it was dead. So I tracked down an INDUS GT drive.
> With the 800XL came quite a few disks - some are the original
>commercially sold disks and most are copies with 4 or 5 games on a
>disk.
>
>1) I have one disk labled "translator". As I understand it, a
>"translator" disk is needed with an 800XL. Right?
>
>QUESTION - WHY is this necessary? What does the translator do??

From what I understand when the 800xl came out, it was internally different
than the 400 or regular 800 to the point where some programs did not run (IE
Larry Bird vs Dr. J.). "The Translator" just sets things straight and lets
these programs run.

>2) Even the couple of original commercially sold game disks will only
>load in successfully once in a while. And, it seems that only if I
>load the "translator" first do I have much of a chance that the
>programs will actually successfully load/run.
>
>QUESTION - Can it be that the real problem is that the drive is out of
>alignment?? If yes, what can be done to correct things??

I do not think so. I have tried those programs in new and used drives and they
still need "the translator".

1668. Czech Mega CD Interface

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-24 07:09:56 UTC
From: "Edward S. Baiz Jr." <edbaizjr@comcast.net>
Message-ID: <42426ef01534db4@comcast.net>
Source record: 11824

Hello,

I purchased this interface from a guy Israel and I must say that it is an amazing piece of hardware. Works like a charm in loading the games from a CD to my Atari 130XE using a regular CD player. I hear there are utilities that explain how to copy program onto a CD in the Mega CD format. This would be great except for those programs that have to write data. I am wondering if I could use a regular Atari 1050 and daisy-chain the Mega CD player. Somehow I do not think that will work, but I will give it a try anyway.

Well,
how about the idea of the Gamelink-2 then ?!? This system allows one to
kkow 2-8 Atari computers together via a network. But, err, afaik only
one computer acts as the master, while all other computers are connected
as slaves. but maybe this can be changed somehow... anyway, the
possibility is there - but as of yet there is no(t much) software
available for it... as always... -Andreas.

The "translator" is simply the old 400/800 OS, and makes work programs,
which use the OS calls illegally.

> and put a switch on the enable pins???

Well, yes. Except that you most probably need to apply a little patch to the 400/800 OS in order to make it start on XL/XE hardware. Namely, the Atari OS explicitly zeroes the I/O ports, including the PORTB of the PIA. On 400/800 this does not hurt, for PORTB is a joystick port. On XL/XE however zeroing it would cause the OS ROM to be switched off, and cause the machine to hang.

So you need to modify the routine that initializes the I/O ports so that it would first of all clear the PBCTL register ($D303) before proceeding. This should be enough.

I believe that this could be also done in hardware - so that your switch could lock the bit 0 of the PORTB and keep this line be always "1" for the PIA. This would prevent switching the ROM off by the procedure mentioned above.

K.

> Why is that?

I'm not really technically inclined, at least not as far as the electronics
of the Atari goes. Read: Somewhere between amateur and wannabe.
However, I would tend to think that adding a second processor to the
motherboard itself, would introduce a whole assortment of problems.

The bus is not designed to support two processors. It would require so
much effort, that you'd essentially end up redesigning the whole board from
scratch. You'd have to pretty much tell the atari to forget everything
that it knows and teach it how to play in a new neighbourhood.

You wouldn't be able to simply piggyback two processors... Cuz each
processor, I would guess, would have to have it's own unique access to the
bus. You wouldn't be able to have two processors using the same data lines
simultaneously. You'd really have to introduce some type of control over
the bus and which processor could do what and when.

Of course, this is just my uneducated poke at sounding like I know what I'm
talking about... But nevertheless, I recall reading articles on problems
engineers have had in turning a single processor computer to a
multiprocessor computer.

...PARADROID.

I for one think it could be easily done an the A8, and having a look at the C64 version, there might even be room for little graphical enhancements. (16bit versions not counting!)

What do others think?

Cheers,

Frank

Hi Frank,

> ....PARADROID.

Check out the ATR I posted on AtariAge
http://www.atariage.com/forums/viewtopic.php?t=31087&start=25

This has an intro based on the 16 bit version.
As for the game itself, I've often thought about
how it could be done - but I feel the A8 sprites wouldn't
be up to the job without a good multiplexing engine.
The shift to software sprites may slow the game down a bit.

I'd still like to see the exchange game on the A8 though ;)

Regards,
Mark

That's because they are unregulated - with no load they will run at a higher
voltage and that voltage will decrease with load.

30 to 40 amps seems an awful lot for a little 9v supply, either way so long as the voltage is the same the max current is irrelevant, as the device attached to it will only draw as much current as it needs. Think of it as like driving a Ferrari - it can do 200mph, but if you want to do 55mph it will do that just fine :)

I see where you're coming from, but that's why I decidedly left the 16bit versions out. I really think a fast and very playable C64 port should be possible. And the droids there are only monochromatic, so no problem for the Atari Players/Missiles. (-:

So get started again. You can use your intro, if you like... (-;

The Atari 8-bit *is* a dual processor computer already. Antic is a
processor in its own right. Atari got over this problem by "pausing" the
6502 when Antic needs access to the bus.

True, but we're talking about adding a second 6502 processor. Given what
you know about the 6502 and the Antic in the Atari 8-bit, you can understand
what problems one would be forced to contend with in any attempt to add a
second 6502 processor.

Not to say that it would be impossible to add a second 6502; after all,
anything is possible. To add a second 6502, that would provide any
practical use, without extensive reworking of the motherboard and OS would
present significant challenges. It could be done, just not easily.

Anybody know of a way to view these AVI's on a Macintosh? Quicktime will play the audio portion, but will not display the video.

Is there a DivX CODEC for Quicktime? I downloaded DivX 5.1 and DivX 5.1.1 for the Mac, but I can't get anything to work.

Suggestions? Comments? Questions? Ideas?

That's not fair, Steve! Perhaps Ben has multiple personalities, and each personality was born on a different day. Conceivably, with multiple personalities, Ben could theoretically have a birthday everyday of the year.

Another possibility, Ben could be illiterate and unable to read the date on his birth certificate. If this were the case, it's possible that Ben is just guessing when his actual birthday is. You know, waiting for somebody to come along and say, "Yes, Ben, it is your birthday. You finally got it right!"

Perhaps Ben is just delusional. Perhaps we're just delusional and Ben doesn't even exist. That's it! We're delusional and Ben doesn't even exist. So let's just move along and leave our imaginary Atari 8-bit dealers behind.

Same as many of my projects ;)
Fallen by the wayside - as with Paradroid,
the A8's difference in hardware sprites forces a
different implementation for the SB players.
These (IMO) would be harder to implement
on the A8 (probably as software sprites)
and would slow the pace of the game.

Search on AtariAge for author Wrathchild (me)
and titles such as Barbarian, World Class Leaderboard,
Bard's Tale, Paradroid, Speedball and Elite.
Reading some of those will give you an idea
of progress (and reasons to lack off).

I'm still looking into things on the A8, and
will get around to finishing a major project one day...
just probably not in the next year or two :(

At the moment I'm happy porting games to cartridge
from disk release, e.g. Koronis Rift and Eidolon
were done recently and work on Gauntlet almost done.

Hope that helps,
Mark

Yes, Congrats. The Apple II-IIgs line has had accelerator boards
for a long time. There were speed-ups for the II and II+ which
allowed them to run at 2.5-3.5 MHz and also incorporated 65C02
CPUs. The IIe had the Titan and Transwarp which allowed them to
run at 3.5-5 MHz, and also the Zip Chip for IIe which had 4 and
8 MHz models. These totally replaced the CPU. For the IIgs you
had Transwarp GS and ZipGS boards which with proper mods could
go up to 16 MHz. They never got them to the proposed 20 MHz.
Problem is, these technologies were buried in concrete when the
Apple II line was abandoned. Shame.

In a word: Absolutely!

You'd be dealing almost exclusively with software. The MPI is a software interface. The only real hardware to develop is a simple cable.

The MPI for clustering microcomputers has already been developed and largely standardized. The Message Passing Interface ("MPI") is already in use on the Macintosh and in various UNIX/Linux environments for the PC. Adapting the "Open Source" MPI to the Atari 8-Bit should be a relatively simple task for anyone with enough knowledge of the Atari.

I would guess that any Atari 8-Bit cluster would not fully utilize the capabilities of the MPI already developed for other microcomputers, therefore some efficiency could be realized in an Atari 8-bit adaptation.

Source record: 11760

Call me crazy, Red, but I store my cartridges in a box. Not just any box, mind you, a cardboard box. Yes, perhaps it's a little over the top, but I'm committed to the hobby and anything short of a cardboard box just wouldn't suffice.

A few tips on selecting the proper cardboard box for your cartridges:

1) You should get an idea of exactly how many cartridges you have before beginning your search for the proper cardboard box. You don't want to invest too much time and money into procuring an inadequate box. You should be sure that the cardboard box you get, will store all of your current cartridges, as well as any cartridges you may anticipate acquiring in the future.

2) You should choose a box that suits your own personal style and preferences. For example: You might not want a shoebox if you're a consumate consumer of a particular brand of beer. Perhaps the box that your last six or twelve pack arrived in, would make a great storage compartment for your Atari 8-bit cartridges.

3) You may wish to pick up the latest edition of Martha Stewert Living for other ideas on storing your Atari 8-Bit cartridges.

I hope this helps and please feel free to email me if you have any further questions.

Personal computer. You know, my Newton messagepad makes a good "personal
computer", and about every other computer I have makes a good "personal
computer". Except for my Windows computer, which is on a network, but
that is a "public computer" since it is at work. ;)

Hey guys, I am breaking down and trying this... IBM emulation on the Mac
with SoftPC and running APE.

Anyone have any luck with this? Obviously I have not so far.

One thing that can help me at this point... think of the SLOWEST
computer that you have ever run APE on. And it worked. :) What were
the settings... list everything in the configuration.

I am not only trying to get this work on the Mac, but on a Pre-1993 IBM
type computer.

Thanks!

I have had limited success with VirtualPC (last Connectix version) and
USB<->RS232 interface. It worked to a degree but highly unreliably.

My bet would not be on the emulation's faults though but rather on the
USB<->RS conversion's latency and co.

No I do not think the data is stored like audio, but who knows. All I know is
that the data in on the CD and I must play it like any other CD I put in the
player. Also, to get the data to load properly, you must have the volume set
correctly. Too high or low will result in nothing being loaded in.

Alek a ï¿½crit:

>>I have Nokia 6100 which also plays MIDI files, but I don't know tool which
>>can convert SAP files to MIDI, so I thought that it would be better to write
>>Java application which can play Atari music files.
>>

A solution is to use a software which can save all sound playing via
your soundcard.
I mean, you play the SAP files and during that the third party program
can save a WAV which will have the music on it.
After that, I think it will be esaier to convert the wav file in MIDI.

Digital Sound Recorder can do that but sure they are others and maybe
free/gpl ones;

Sorry for the bad explanations but english is not my first language

Have you had any luck viewing these vid's?

I was wondering if anybody could convert these videos to Quicktime Movie format or to MPEG format for us poor saps that can't find anything to play AVI's?

If anybody could do that, I would be most grateful, as I'm sure others would be to. I noticed in the AtariAge forums that other people have been unable to view these videos as well.

Thanks,

Willy

We have the Atari hangout chat tomorrow at 10 am CST, which is about evening for most in Europe. A great time for both to chat. :) We meet at telnet://www.atarinews.org Works like this...
.. log on, type BBS, & then BBS.
It will go from that login to the next, and that is where your ID and password would come in. From thre after the open message, T for Talk, C for chat, and then enter your Chat id and you're in! .
Hope to see some of you there tomorrow at 10 am CST. .
Doc Clu 800
.
PS: For the Atari 8-bit and emulation users, Ice-T works great in there. ❒ ❒❒und out today it is not too horrible if you run Bobterm in VT520 mode. Actually less static using that than in ASCII mode. :D Not great, but not as horrible. :) Take care!

The slowest computer I've run APE on was a 16MHz 486SX. 2x SIO speed
worked but not 3x. Nothing special in the configuration

What kind of speed do you get out of SoftPC?

Have you tried doing anything else with the serial port under the
emulator to verify it is working right?

They are XVID. This codec is similar to DivX, and in fact if you have a DivX player on your Mac there is a good chance that you can watch these videos by simply going into the AVI header with a hex editor and changing XVID to DIVX.

Hi Tom,

I'm not sure many people will agree with any of my choices, but here they
are anyway.....

1 - Star Raiders
2 - Pacman
3 - Galaxians
4 - Vanguard
5 - Preppie 2
6 - Centipede
7 - Zaxxon
8 - Spy Hunter
9 - Airstrike 2
10 - Bruce Lee

Rob

I'm sorry - isn't that amperage you are thinking about? How much load
would a "portable" pocket modem create?

The higher the voltage, the more heat the unit has to dissipate. Like
my TI expansion system - TI built them with unregulated power supplies.
They supply 16V and 8V to the cards, which have to step them down with
regulators to 12V and 5V respectively. Thereby generating a lot of heat
(and sometimes causing thermal shutdown on regulators).

Besides, I remember using a "battery eliminator" with my Mattel
Football II. It supplied just over 9V, and it ran MUCH faster than the
normal 9V battery. Switched to a higher voltage, it would go much
faster, lower - slower.

Ben

1. Ultima III, IV
2. Star Raiders 1,2
3. Archon I
4. F15 - Strike Eagle
5. Wizards Crown
6. Hitchhikers Guide To The Galaxy
7. Realm Of Impossibilty
8. Rescue On Fractulus
9. Silent Service
10. Star Fleet 1

No particular order - I loved all these games. I probably spent the most hours on the Ultima series though. :-)

Couldn't even remember 10 favorites from the old days so here is my top
9.

1. Star Raiders
2. Boulder Dash
3. Miner 2049er
4. Arkanoid
5. Ms. Pacman
6. Mr. Robot and his robot factory
7. Sea Wolf 2
8. Joust
9. Tapper

Henry's House is looking interesting but very difficult. It might make
it to my top 10 (and then again it might not).

My guess is that first you would have to "write" RS232 hardware ports
for the Mac... We are facing very similar problem here to that of people
trying to interface Commodore's IEC bus to the Macs - no directly
accessible, interrupt capable hardware port to connect it to :-(

The tendency is slowly gravitating towards USB/IEE1394<->uC<->legacy
solutions, which (given enough time and incentives to those who don't
have to work for living five or more days a week) may be the ultimate
solution for both 8bitters.

Don't know. I don't have such a Mac to try. But I guess that IF the
RS422 port of the old Macs have enough lines to cover the APE/SIO2PC
needs - it could work with the appropriate cable conversion. But then
the old Mac (round serial port) may not be powerful enough to handle
the emulation and communication within the timing constraints...

And I would double-check on how you connected the lines. The 8pin
mini-DIN RS-422 used on the older Macs, certainly didn't have ALL the
line equivalents of the typical RS-232. It didn't affect heavily the
regular modem operation but I am almost sure it didn't have e.g. the RI
line required by SIO2PC. I don't remember exactly which line the
APE-style cable used but this might be the show-stopper if you find the
required signal lacking.

: Doc Clu 800

Not sure if the info below will help you, but I figured it can't hurt.
Good luck.

Mini DIN-8 IIgs Serial Port (also IIc+ and Macintosh)

The IIgs serial port is numbered as follows,
looking at the back of the computer:

Mini-Din 8
IIgs Serial Port
(Female) Socket

8 7 6
5 4 3
2 1

Pin Signal Name and Description*

1 HSKo Handshake output. Driven uninverted from the
SCC's /DTR output.
Voh = 3.6V; Vol = -3.6V; Rl - 450 ohms
2 HSKi Handshake input or external clock. Received
inverted at SCC's /CTS and /TRxC inputs.
Vih = 0.2V; Vil = -0.2V; Ri = 12K ohms
3 TxD- Transmit data (inverted). Driven inverted
from SCC's TxD output; tri-stated when SCC's
/RTS is not asserted.
Voh = 3.6V; Vol = -3.6V; Rl = 450 ohms
4 GND Signal ground. Connected to logic and
chassis ground.
5 RxD- Receive data (inverted). Received inverted
at SCC's RxD input.
Vih = 0.2V; Vil = -0.2V; Ri = 12K ohms
6 TxD+ Transmit data. Driven uninverted from SCC's
TxD output; tri-stated when SCC's /RTS is not
asserted.
Voh = 3.6V; Vol = -3.6V; Rl = 450 ohms
7 GPi General-purpose input. Received inverted at
SCC's /DCD inputs.

Vih = 0.2V; Vil = -0.2V; Ri = 12K ohms
8 RxD+ Receive data. Received uninverted at SCC's
RxD input.
Vih = 0.2V; Vil = -0.2V; Ri = 12K ohms

Note: Absolute values of specified voltages are minimums;
Ri is a minimum, Rl is a maximum.

Cable to connect IIgs to a serial Dsub-25 printer

The wiring for a serial printer cable would be as follows:

IIgs Printer (DB-25)

1 Hshk Out ----> 6 DSR (or possibly 5 CTS, or 8 DCD)
2 HShk In <---- 20 DTR (or possibly 4 RTS)
3 TxD- ----> 3 RxD
4 Gnd ----- 7 Signal Ground
5 RxD- <---- 2 TxD
6 TxD+ No connection
7 GPI No connection
8 RxD+ Loop to signal ground (pin 4 at IIgs or pin 7 at printer)

(Cable shield should be connected to shielding at the IIgs end, and to
pin 1 at the printer end.)

Do you mean changing the Filetype and Creator with ResEdit? Or do you mean actually going into the HEX code, searching for a string that reads "XVID" and changing it to "DIVX"?

I'll give it a try.

Thanks.

Help! Just need to know if an american cart is different from a uk one?
Have not found any info on any carts boxes or isntructions to say
otherwise. Should I assume that the cart is before the signal is turned
into respective rf output?

Long and short is if a cart is bought from us will it work here?

Only interested in genuine atri carts by the way if this makes any
difference.

Andrew.

I figured a stab at humour was better than admitting that I only have three cartridges. I don't really have to worry about storing my cartridges; I only have three.

By the way, I've heard that the Brazillian cardboard is of the best quality. Of course, that's just a rumour and can't be substantiated.

For anybody interested, Apple released a technical note a while back that provided all of the pinout information for the Macintosh line of computers.

I don't have the actual file any longer, but I did print the thing up and I can give you the name of the file: HW 19 - Pinouts.

It was released by Apple Developer Support some time ago. It begins,

"This note gives pinouts for Macintosh ports, cables, and other products.

Below are pinout descriptions for the Macintosh ports, cables, and various other products."

Message-ID: <BE6C6B75.545%wduke@cogeco.ca>
Source record: 11705

Sorry, Richard, you don't mind if I call you Richard, do you? I have a couple of spare 9VDC PSU's but they're not 220VAC type. I'm in North America, so they're 110VAC.

As far as European sources for 9VDC PSU's, I really wouldn't know. If you have a way to make a North American PSU work for you, I have one available.

: and changing it to "DIVX"?

William,

It's right in the first few lines of character based
output. Just type DIVX over the XVID word and save.
I've done it to 2 files so far. Works great.

Well not in any order, except probably #1.

1. Goonies
2. Bruce Lee
3. Pitfall II
4. Leaderboard
5. World Championship Karate
6. Ninja
7. Zorro
8. Archon
9. BallBlazer
10. E.T. (The A8 version was MUCH better)

Not in any particular order:

* Lunar Patrol (from Analog)
* Montezuma's Revenge
* Lode Runner
* Silicon Warrior
* Mr. Robot and His Robot Factory
* Wizard of Wor
* Fortress (Tetris)
* World Championship Karate (demo mode)
* Saracen
* Miner 2049er

Proably a lot I've forgotten about, too.

Actually you can store the data in audio. That's how its done on the
Jaguar. Using programs like CDRECORD.EXE, a command-line CD buring software
available for a variety of platforms, you burn the raw binary data onto
audio tracks.

You would have to burn everything onto a single session on the CD and are
limited to 99 tracks for this single session according to red book
standards. Because mode standard audio CD players are only designed to read
the first session. Only difference on the Jaguar format is that the first
session contains music / audio only and the remaining sessions are available
for data, audio, and music.

I wouldn't recommend playing back this format through your stereo system
though. Would have harsh effects on your amplifier and speakers.

I have to admit, very simple and ingenious design.

Man, when I saw the subject heading for this thread, I thought I was going to be able to drop in on some people talking about using their 1010 Data Recorder.

I have an old 1010 Data Recorder kicking around. I swear it must have at least two inches of dust on it. *cough* *cough* I just blew the dust off it. Yep, it's a true to life 1010 Data Recorder. I got it for Christmas many moons ago. It's hard to believe that I actually had it on my "wishlist"...

So, what do you folks do with your 1010's?

I'll byte. I was not really a gamer (and still am not) but I did have few
favorites:

1. 7 cities
2. stealth (i had this predecessor but forgot the name of the released
game)
3. Star Raiders
4. one on one
5. galaxian
6. centipede
7. karateka
8. Last Starfighter
9. Hardball
10. Lode Runner

There were a few others but the names slip my mind.....

I also liked building and playing those Pinball Con. Set games.

I just have a little plastic Sterilite container I use. It's not
air-tight or water-tight, but the lid stays on when I lug my carts around
(I exhibited at Classic Gaming Expo a few times, and moved recently).

They're not really 'on display', and they're far from organized, but it
seems to keep them save from my cats. :^)

Actually, MIDI is a music format, that uses instruments to play.
(Think of it like sheet music.)

WAV (and MP3) is simply a sample of sound.
(Think of it like an audio cassette tape.)

So, while it's probably possible to convert WAV to MIDI
(there could be software that 'listens' and tries its best to pick what
notes are being played), it's probably not what you want.

If your phone can play MP3s, just convert the sounds to MP3s!

As for making a SAP player for a phone, you MIGHT have luck with some of
the more open platforms (like a PalmOS-based phone), but I doubt even the
Java phones have any way of saying: "when the phone receives a call,
execute this arbitrary program, instead of playing a ringtone or MP3". :^/

> Digital Sound Recorder can do that but sure they are others and maybe
> free/gpl ones;

Actually do WAV->MIDI? Huh! Wow! Is it actually GOOD?!?

> networked, so why not clustered?

Back before I knew what a 'cluster' was, I was thinking of doing something
similar to X-Window on the Atari 8-bit, using MUX cartridges.

The normal "one master, and N slaves" setup is for filesystem sharing
(like people did/do with BBSes and Mulitplexer).

My idea was to have one of those N slaves act as a 'display'
(doing all of the graphics, window management, and keyboard/mouse/joystick
input), and the remaining N-1 slaves actually do the processing.

I may have the details archived somewhere, but I've long since removed it
from my website.

HOWEVER, the good ol' WayBack machine has a copy!!! Enjoy ;)

http://web.archive.org/web/19970204133349/zippy.sonoma.edu/~kendrick/nbs/ados/atwinsys.htm
l

Also, I've since sold my MUX cartridges and OS chips. (I /think/!)

Oh, hey! It looks like Nir Dary has the _whole_ thing archived, too!

I checked them all out last night. Awesome stuff! Regardless of 1.79MHz or
14MHz, where was I, in 1998, when people were throwing multiple animated
3D polygons on the screen at once!? :^)

(Or did they simply hack the existing demos to throw more up, since they
could?)

Great looking stuff!

Some UK poster should respond, but here's my guess. Some will, some won't
work properly.
For NTSC to work PAL programs, you need a PAL Antic, sometimes. I think
that some programs that have 'exquisite' timing, sorta
DLI or other interrupts, they might not work
right. Probably most will.
You should be more specific, I think, what cart
are you considering buying? I'm sure some UK or Euro person can answer you.

Generally load tapes, and every few weeks or so, replace the "Play" button
when it breaks :)

I was hoping for something a little more interesting than that.

I don't have any tapes for my 1010 Data Recorder. I remember, back in the day, I used to use my 1010 to log data to. Instead of using a printer, I used to output to C: and store data there. I found it to be much more efficient than wasting paper and printer ribbons.

When I wanted to read the stuff that I had output to C:, I just viewed it on screen. Of course, this was back in the day when I was poor and unable to buy a whole lot of software, so I did a lot of my own programming.

I've never had the play button break on my 1010.

It's called 3ivx. That's all that I needed to add to my installation of
Quicktime 6. Then, whenever I doubleclicked the AVI files the Quicktime
player started up and I was off to the races.

I couldn't believe that the solution would be that simple, but it was.

I don't recall the URL offhand, but I'll post it in an hour or so.

I remember drooling over the Multiplexer in the old CSS catalog. That, and
the BlackBox were one time dream devices of mine. Ah yes, visions of Atari
8-Bit heaven roamed freely through my narrowly focused mind.

I've since broadened my horizons. Good thing too!

Hello all,

I acquired an Atari 1050 but not the cable to connect it with my Atary
800XL.
Could someone kindly advise me what would be the best way to construct such
a cable?

Many thanks

mario

Well, the official word more or less is that Steve is not a Mac guy, does not know the Mac programming environmnet, and does not have a current Mac for development. Add to that the current Macs don't even have a serial port, and it gets more fun. .
That said, Steve would help anyone that wanted to write something for the Mac he said. :)
.
Like you, I said I would get back with him when I knew C++ better. :) APE is written in C++ for the most part, with the interface written in something else. At this point I wouldn't mind getting DOS APE working on the IMac.

LOL! Star Master is a lot like Star Raiders. On the 2600 it and Phaser Patrol are perhaps neck and neck in game quality, and being more like the Atari 800 version of Star Raiders than the interesting amateur demo entitled Star Raiders on the 2600.

I have Star Master somewhere. My 2600 doesn't get much air time at the moment, but when I was trying to earn my Star Master patch, I believe you can switch to a galatic map by switching one of the console switches. You would select and the warp.

Ok, enough guess work on this... let's check online for the manual...

http://www.atariage.com/manual_thumbs.html?SoftwareLabelID=507

In other words, Atari age has it there (those wonderful guys.)

There we go... you flip the black & White switch for the Galactic Map.

Message-ID: <33a084.7cb3b7@fmlynet.org>
Source record: 11745

Looking at the Star Master manual I find a few things interesting...

Ok, the game was made in 1982 first off. Which would put it like three
years after the Atari 800 version of Star Raiders.

You have the Mission/Attack Control Computer. Or a MACC. :) Being a
Mac user I find that funny.

Levels of game play... Ensign, Leader, Wing Commander, and Starmaster.

While Wing Commander is a common term, William R Forstchen would write
at least one of the Wing Commander books in 1998.

Ok, I am doing a pop-up video on Star Master I realize. :D

Message-ID: <1112074482.109514.6520@f14g2000cwb.googlegroups.com>
Source record: 11747

Internet Home Business

Minimum financial requirements:
Any credit, debit or bank account with at least $6.00 balance.
Minimum computer literacy:
Follow onscreen instructions and operate a mouse.
Minimum time investment to start:
Approximately (5) hour's computer time on-line

"THIS IS A LEGAL BUSINESS OPPORTUNITY!!!"

#####LE 18 Sec. 1302 & 1241 of the Postal lottery laws, provides guidance to the legality of this specific business opportunity. The policy and procedure of this venture is discussed in depth at Fairhaven College Discussion Board link below:
http://pandora.cii.wwu.edu/WebServices/_generaldiscussion/00000040.htm

No Fake Names! No False Information! Follow Policy & Procedures with Integrity!!!

"This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. In this business, your product is not solid and tangible, it's a service. You are in the business of developing mailing lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from mailing lists is secondary to the income, which is made from people like you and me asking to be included in that list."

Example: $6.00 + 5hrs. + Integrity = $20,00.00 in 4-6 weeks

Step1. Go to www.Paypal.com, open and activated an account for free that allows you to send and receive funds via secure e-mail notification. This may take a couple of business days to verify account information and confirm identity.
Step2. After activating your Paypal account, use your new account to pay $1.00 to the following email addresses in the order they are listed. (Total $6.00)
1. (njekm@hotmail.com) 2. (wthampton@hotmail.com) 3. (Ldrury@rock.com) 4. (samwkfld@yahoo.com) 5. (1damnyankee@comcast.net) 6. (katama1965@mail.com)
Step3. Email each of the six email addresses and request that you be added to their lists.
Step4. After requesting that you be added to each core lists, edit this notice as follows:
Move everyone in the core mailing list up one position eliminating the

first address. Place your email address in the sixth position and save document.
Step5. Find Internet newsgroups, discussion boards, message boards, forums, chats, in financial services field and post this notice a minimum of 200 times. The more postings, the bigger the list and the more return. That's it!

Again I cannot emphasize the importance of following each step carefully and honestly.
Good luck. God bless. Watch the money role in.

Erhard Puetz (ABBUC FloppyDoc) has written one for Sparta Dos (uses
Command Line Parameters). The Sector Copy Program was published on one of
the ABBUC Magazines in the last two years (I don't know excactly which
Issue).

@Andreas Magenheimer: Andreas, do you know the ABBUC Mag Issue?

Best regards

Carsten Strotmann

That's all very nice, but I live in Europe, and postage expenses from the US alone, make this a very unattractive option. That's why I asked for advice on how to construct such a cable. I guess all I need to know is the exact pinout. And a confirmation that I can use DB13 connectors at the ends.

1794. XEP-80

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-29 07:40:22 UTC
From: Simon <news@gornall.net>
Message-ID: <n-SdnWrzWPn6m9TfRVn-gA@comcast.com>
Source record: 11652

Hi all,

I've just got an XEP-80 system, and I'm having a few problems getting it
to work...

If I put the boot disk into my 1050, and boot the disk, it obviously
boots, then the (40-col) screen goes black. If I then switch the TV over
to the composite input, I get a black screen also, with a sharp white
cursor-shaped square on the top line.

The problem is that that is all I get :-(And I get the same display if
I leave the XE off, and just power on the XEP-80. It looks to me as
though the device is outputting something, but just isn't talking to the XE.

I've got a Spartados-X cartridge, and I made the following CONFIG.SYS file:

```
USE BANKED
DEVICE SPARTA
DEVICE SIO
DEVICE INDUS
DEVICE CLOCK
DEVICE JIFFY
DEVICE XEP80
```

When it boots up, I get the (expected) "R-Time 8 not present" message,
but I also get "No XEP-80 in Joystick port 2!", which there definitely
is :-(

Am I doing something wrong, or is there any way I can check to see
what's going wrong ? I've not used an XEP-80 before, so I'm hoping
someone else has come across something similar :-)

ATB,
Simon.

They aren't. Even to connect a regular, external modem (or similar
equipment) one could have two different cables, which were connecting
different sets of signals. One "regular" and one "hardware handshake" cable.

> but yeh, could check the lines.

Yup. Make sure before you start tearing everything else apart ;-)

Do you have the original XEP-80 boot disk? It was required to boot and redirect the output to the XEP video. Later on you could create your own boot-disk for that.

P.S. I believe you have the joystick connector firmly in place in the proper socket... don't laugh ;-) It took me once almost half an hour to discover the wacky contact there...

Wow. Dreadnaught Facter - hadn't thought about that one in a long time.
I'm not sure if I still have it or not, but I can remember how excited I
was when I beat that one level, sent a Polaroid snapshot in, and got the
Dreadnaught patch for my coat.

Its the simple things in life, ya know? :-)

Wizards Crown is a great RPG. Star Fleet 1 was a "Star Trek" like game with amazing gameplay. I still play it on my ST/Falcon. Huge manuels, nice learning curve - not the greatest graphics in the world, but very effective...and as I mentioned, the gameplay is great.

Greg, if you've never played Star Fleet 1, then I'd highly recommend it on the 8bit or ST systems. :-)

The original SpartaDOS X XEP80 handler has some problems, especially if
you run it on a PAL computer. You can download a fixed version from:

http://trub.sys.net.pl/download/sdx/XEP01F.ARC

However, problems can mean that your XEP is simply broken.

I tried to write a list and exclude all of the famous titles like Boulder
Dash, Pole Position et cetera.

1. Snokie
2. Desmond's Dungeon
3. Drelbs
4. Maxwell Manor
5. Rally Speedway
6. Zeppelin
7. Caverns of Khafka
8. The Institute
9. Pharaoh's Curse
10. Alien Ambush

Off the top of my head...I'm probably forgetting some really good titles,
but I am limiting it to non-arcade conversions:

Alley Cat
Blue Max
The Great American Cross Country Road Race
Hardball
Necromancer
Night Mission Pinball (sounded incredible when heard through the internal
speaker of the 400/800)
Rescue on Fractalus
Spare Change
Star Raiders
World Karate Championship

Hey, Mario;
The pinouts are here:
http://mixinc.net/atari/pinouts/pinouts.htm#pinouts
which is the easy part, basically looking into the jack on the
computer or drive they are:
2 4 6 8 10 12
1 3 5 7 9 11 13
I believe Atari's Molex connector is NOT a standard DB13
as it appears to be larger in size.

Hardback from Orion Microsystems. While it is not a sector copier, it's great for files. It doesn't care how large the disk partition is (up to 16 meg of course). I use it all the time to do hard disk partitions both with APE and real hardware.

Can you point me in a direction where I could actually get it shipped for
that little? My last quote was US $20 for shipping to Finland (that's where
I live).
>
> You can also find them in Germany, Uk, Holland or Poland. A bit of
> patience will pay.
Perhaps, but not under the name "molex cable". Where I live, "molex" is
usually associated with the molex connector, like this one:
http://www.sidewindercomputers.com/femoco.html
and "molex cable" would be a calble that on one end has a molex male
connector, while on the other has one or two molex female connectors.

However, I noticed that Bill Garber calls it "SIO cable", and under that
name I was able to find it on eBay. Unfortunately, with the $20 quote for
postage.
>
> I'd rather spend $15 (10 euros) for an original cable than 6-8 euros
> for a self-made one...
I don't mind paying EUR 10 for a suitable cable. What I resent is, paying
$20 + $10 for it.

$20 may be high, depending on the services you were quoted. Sending
one cable for Finland by USPS mail would cost $6.40 for air mail 'Letter Post'
from the US, without insurance. If they quoted you insurance then it has to
go air mail 'Parcel Post' which is $14 plus the $1.80 insurance fee.

Other carriers like UPS, DHL and Fedex will all charge much more than $20,
even for a small parcel. You are also likely to get charged a 'customs brokerage fee'
for receiving a parcel through these private carriers, even if no duty is levied.

The rate I was using was 8oz per cable, which includes some margin
for box and packing materials. So I came up with $6.40 for one, $11 for
three (1lb 8oz), Air letter post.

I think 3 cables would be a little over 1lb, but I have not actually
weighed a set completely packed.

Thanks Bill, I really appreciate what you are doing. However, Mr. Tucker
contacted me earlier today with an e-mail, and explained that they charge
only US $6.40 USPS AirMail.

My policy is, up to one pound, 1-2 pound, etc..... I sometimes have
multiple packages to estimate and to just say up to a pound $8.70 is much
easier than weighing each one. Similarly, my ram cards can ship up to 3
in one box for $3.85 domestic, or $8.70 International. So I charge also
the same rate for only 1 card in the box. Much easier and no one seems
to mind either way.

: I think 3 cables would be a little over 1lb, but I have not actually

Most likely. I haven't done any actual weighing or packaging.

I have ordered a ton of stuff ("old junk" as my wife would call it) from the US, and became quite familiar with the USPS online international shipping calculator. I also became quite familiar with all their services, and most fond of one in particular: it's called USPS GPM Flat Rate Envelope (Small and Large). The Envelope (Large) accepts up to 4 lb weight, and it costs only US $9.00 to Finland! This is AMAZING value, if you consider that it costs almost as much to send a parcel that heavy within Finland itself. It is WAY cheaper than AirMail, and it's faster. Sometimes much faster, as AirMail sometimes lags up to 3 weeks. USPS GPM Flat Rate Envelope always arrives within 1 week without exception. And finally, it's very convenient because it's delivered to my house, while AirMail sometimes ends up at the customs (regardless of declared value). It's also convenient because it's delivered by a special courier that comes in the morning before I go to work, not by the postman that comes at around 10-11 AM. Finally, it's apparently more convenient for the sender, too, as it requires a simplified customs form, and depending on the value, no form at all!

Let me make it clear: when eBay sellers ask these ridicolous amounts of money for postage, it is NOT because they are chosing some superduper

special shipping service. It's just sucker tax that they (try to) levy on people living overseas. I find this infuriating, but often I have no choice.

>
> Steve
> --
> --
> * * * Author of Imagic and APE - The Atari Peripheral Emulator! * *

*

I'll look into "APE" a bit. I am more of a S-100/CP/M guy, but I have recently discovered that a really shabby looking Atari 800XL I bought for cheap from a computer shop (it was laying around in their storage room) actually works perfectly fine. So I started playing with it, and have to say, the little things it has just blew me away. So I got this 1050 for cheap, and hope it works. Maybe I will become an Atari-kind of guy. Conversions, conversions...

BTW. do you know what kind of DC PSU do I need for that drive? I mean, what is the polarity (is the outer cylinder the +, or the inner?)? Voltage will be easy, but typically one doesn't want to mess with polarity.

I think its a good deal.. considering what many eBay sellers are
charging these days. Last week I was looking at a lot of Atari computers
and the guy wanted $65 for UPS shipping to go from PA to Ohio.

I'm not a big UPS user (they like to break things) but I'm pretty sure
the actual rate would be more like $20.. even less if he sent it Fedex Ground.

I'm starting to avoid buying from anyone who uses the eBay shipping
calculator... every time I use it the rate is always padded by at least $10.

Steve

1050 power supply is 9 volts AC **NOT** DC so the tip polarity doesn't matter at all. It must be AC as the drive will not work with DC supply. 31 VA which is Volts/Amps so that would around 30 watts minimum and this same power supply is often used for the 800 if that helps any.

Look for a message in this group titled 'Welcome to comp.sys.atari.8bit' and follow the threads to several FAQs including power supply specs, current vendors, and gobs of other useful info.

Ok. I got a step farther with this game and I was happy :) I was able
to attack some ships by going to the Galactic Chart. However,
something happened during the game and when I go back to the GC I can't
seem to get back to where I was (in other words I'm back to flying
around and doing nothing.)

I'm playing the game on an Atari 5200 with the VCS Cartridge Adapter
for 2600 games. Is there a black and white switch for that thing?
I've searched it but can't find it.

Thanks for your help;
Frank

You missunderstood me. Mr. Tucker contacted me earlier (directly by e-mail), and I have already ordered the cable from him. I noted the information about shipping NOT as a criticism to you but as the reason why I immediately thought Mr. Tucker's quote was very reasonable, and hence proceeded to order the item. At the point when I read the newsgroup, it was irrelevant whether I would find your quote acceptable or not, as I have already ordered the item, and I needed only one cable.

I hope this is now clear.

FWIW: If they are using one of those 'store front' shipping places
instead of doing it themselves it will turn out that high. They double
to triple the price of shipping something in my experience.

Yep, well it appears to be anyway - it has an official-looking Atari
label on it saying 'XEP80 Boot Disk' with DX5087 underneath it.

> P.S. I believe you have the joystick connector firmly in place in the

I've tried pushing the joystick cable in firmly :-(

Perhaps it is - Ben'll be getting an email if so :-) Thanks for the link
- I'll d/l the new driver and have a look. Presumably I just put it on
the [MAIN] partition of the disk, and it will over-ride the one on the
CAR: device ?

ATB,
Simon

1828. 6502 Processors For That?

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-30 02:59:41 UTC
From: You <you@cogeco.ca>
Message-ID: <BE6F804D.64A%you@cogeco.ca>
Source record: 11685

I was just doing some research on the Macintosh Quadra 950 because I was looking into adding one to my collection. As a curious sidenote, I was surprised to learn that the Quadra 950 used 6502 processors to offload the 68040 in I/O operations. Interesting!

Are there any current model computers that use 6502's for specific tasks? Is anybody using the 6502 processor anymore to assist other processors in performing certain tasks?

I thought this was interesting because there had been so much talk recently about upgrading or supplementing the 6502 in the Atari 8-bit line of computers. It was something of a surprise to me to learn that the Macintosh Quadra 950 used 6502 processors to handle things like disk input/output. Hmm, learn something new everyday.

I thought that Hardback was just for Sparta? Does it work for
Atari-type Dos (such as MyDos)?

Good Question! I really don't know since I don't use anything but Sparta
for the most part and all of my ATR 16meg images (as well as the HD
connected to my MIO) are Sparta format. You are probably right about that.

Your best bet may be something like AtariSIO, which I think is open source.
I don't know anything about the Mac though.

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be
listed here. "Active" PD/freeware/shareware developers should also be=
listed.
Persons or entities holding rights to products, but not selling or=
supporting
them in any way, should NOT be listed here.

"Vendor" =3D Reseller of products produced by others. Types of products=20
sold are given in categories: new hardware, used hardware, PD/freeware/=20
shareware, (new) commercial software, used (commercial) software.

"Developer" =3D Producer of products. Titles of products produced by the
developer are listed. No prices are given.

"Publisher" =3D Publishes a print or disk magazine, or a book. Complete=20
subscription or ordering information should be given, including prices.
Authorized online publishers of originally print or disk magazines are also
listed. Online books are not listed.

"Repair Shop" =3D Can repair 8-bit Atari or related hardware devices. Be
sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication
title. If no company name exists, a personal name is used. "See"
references indicate complete information may be found under the given
heading. "See also" references indicate closely-related information may
be found under the given heading.=20

The month/year that vendor information was most recently fully verified is
given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web address.

No email addresses are listed due to spam consequences.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite
to enclose a self-addressed stamped envelope. This works well when both
persons live in the same country. However, if they are from different
countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union,
during its Congress in Rome, introduced the International Reply Coupon
service. International Reply Coupons (IRC) are exchangeable in all member
countries for the minimum postage of a priority item or an unregistered
airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU=
member
countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no=20 guarantees. Information of this nature constantly ages; therefore, the=20 information contained in this list is constantly updated. Please use the=20 latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to=20 send me updates that correct errors that you find. If you use this=20 list, please do your part in keeping it useful for everyone!

"ayjay1965" <andrew@saunders44.freeserve.co.uk>:
>Help! Just need to know if an american cart is different from a uk one?
>Have not found any info on any carts boxes or isntructions to say
>otherwise. Should I assume that the cart is before the signal is turned
>into respective rf output?

The big difference between PAL and NTSC machines is the 50hz versus 60hz vertical blank timing. This translates to more cpu cycles available to the PAL machines in the VBI (verical blanking interval: the time the electron beam is turned off and traveling back to the top of the screen.)

So, to answer your question: pretty much all software written for North American 8-bit machines will work on a PAL machine. Some PAL software will NOT work on North American (NTSC) machines since some software takes advantage of the extra cycles in the VBI (you will notice jumping of the screen, a complete lockup, or other screen garbage.)

>Long and short is if a cart is bought from us will it work here?

Yes. The difference in timing will usually produce a slightly slower game on the PAL machine, may effect the sound, and any game that takes advantage of the artifacting of graphics mode 8, will be only black and white on your PAL machine.

Hi Mario I am in the UK, but a keen Atari collector, I have several of these "spare" in my loft, and would happily let you have two for euro 15, including small packet air postage.

Please let me know if you are interested.

Richard

Thank you, Richard. As you could perhaps see above, I already ordered a cable from the US. It won't be such good value as your offer, but it's excellent value for only a single calble, and that's all I need at the present moment. Besides, Mr. Tucker was very prompt in contacting me, and I appreciate that, a lot, too.

Thanks again, and I'll be sure to contact you should need arise for 2 more of these cables.

Well,
there is a (2 drive) sector copy by abbuc floppydoc erhard puetz which does this. alas, it is a sparta-dos only program. but it will copy anything from 1 - 65,535 sectors in single (128 bytes) or double (256 bytes) sectors from one drive to another (which assumes you have two drives available and both can use / write the same format or density). the program is only 2kbytes short and appeared on abbuc magazine 79. think there was also a program by carsten strotmann, programmed in x-forth (his self-developed a8 forth interpreter). this program also worked with two drives, one had to start x-forth first and then run the sectorcopier to copy 1 to 65,535 sectors in single or double density... well, luckily carsten reads this forum from time to time... -andreas.

Does it?

That's why you would *want* a translator program for your XL/XE but you certainly don't need one. There are other alternatives to using Translator software. For example, you could cease using using software that requires a translator in order to function. There are also hardware methods of getting around the OS differences between the 400/800 and the XL/XE line of Atari 8-bit computers. Some people have installed old OS ROMs in their Atari's that allow them to switch between the two OSes with the flick of a toggle switch.

Something like flicking a booger across the room only updated for the digital age.

I have found that the greatest benefit to using the Translator disk on the XL/XE is the ability to boot into the Atari Notepad. That was killer!

I would hazard to guess that the biggest difference between European and North American cartridges is that Europeans are producing more cartridges for the Atari 8-bit than North Americans are. I don't know this to be true specifically of the United Kingdom, but definitely true of some of the former Eastern Block countries.

There's something about European ingenuity that I find truly inspiring!

Anyway, aside from the obvious NTSC/PAL incompatibilities that tend to surface on occasion, there should be almost no difference between European and North American cartridges.

I think I would much prefer to have APE run on an older style Macintosh as opposed to something of more recent lineage. I would just guess the older Mac systems to be better equipped to support such a task. Besides, you could essentially dedicate an older LC or similar to the Atari 8-bit.

Heck, if you're gonna save your old Atari from taking up residence at the landfill, why not an old Mac as well?

I'm not aware of a sector copier for Atari 8-bit hard drives, but then, I'm not aware of too much that is currently available for the Atari 8-bit. I've been out of the loop for a long time.

Anyway, is there any particular reason that you would require a sector copier for your hard drive? I don't imagine that you would encounter too many instances where a sector copier would be necessary to copy hard drive contents. Do you have a unique situation that necessitates the use of a sector copier?

That being said, the last sector copier I ever used on my Atari 8-bit was a piece of software called CopyMate. I don't imagine that it would be of much use to a hard drive user as it was primarily used for copying floppies.

Why don't you just send Ben a clear message that he will understand? If
everybody responded to Ben's posts with an email, he will get the message.

Whenever Ben goes on a posting binge, just send him a simple email with the
following subject and body:

Subject: One Post/Month To comp.sys.atari.st

Body: Please post only one commercial spam message per month to
comp.sys.atari.st please.

I mean, why not fight fire with fire? You could always create a Hotmail or
Yahoo webmail account just for such a purpose. If everybody starts
flooding Ben's email box with comments like this, he'll get the message.
He may even discover how truly annoying his posts are.

Just a thought!

I tried that - my CONFIG.SYS file had 'DEVICE XEP01F' in it (the unarchived file was called XEP01F.SYS), but still no joy, I'm afraid. I think either the joystick port is bad (although my joystick works in the same port! I guess it could use different lines...) or the XEP80 is just plain broken.

I'll have a play with it over the next couple of days, otherwise I'll be sending it back...

ATB,
Simon.

Basically I want to be able to build and test large (16 MB) ATR's with
an emulator and then transfer the contents of the ATR's to the
partitions on the MyIDE hard Disk. A file copier will work, but a
sector copier would allow me to use one tool regardless of the DOS used
in the actual partition plus it takes care of all the boot information
as well, which File copier would not do.

It could also be used as an easy way to back up a hard disk partition to
an ATR on a PC using APE.

Thanks Andreas,

I found SECOPY by Erhard Puetz. I tried testing it using 2 16M ATR's in Atari800Win. It seems to only want to copy about 3000 sectors for some reason. I tried several different versions of Sparta 3.2 and 3.3 but they all only copy part of the image. Not sure why yet. maybe it just doesn't like the emulator for some reason.

> Your best bet may be something like AtariSIO, which I think is open source.

Yes, AtariSIO is open source. And if anyone wants to port it to another platform I'd be glad to help!

The design of AtariSIO should make ports to other platforms possible (I won't say "easy", though :-). All the low-level serial communication stuff is built into the kernel driver. The user space application just uses the "highlevel" functions of the kernel driver like "receive command frame", "send data frame", "send ACK" and so on.

As a first step, these low level SIO functions need to be re-implemented.

But then, the crucial point concerning reliability is to find a proper design. This took me quite some time when writing AtariSIO and I had to throw away the first approaches (which were user space only) and ended up with a separate kernel driver. For other operating systems this can be completely different, though.

Anyways, in case someone still wants to do a port, just contact me!

so long,

Hias

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

STOP!!! Before going to Auction... Experience Sales, Service and Support! Listing Lower Prices with Dealership Standards! Selling Used & New Atari Games/ Software, Hardware, Books and Accessories! Classic Atari 8 Bit and Atari ST Computer Lines Plus Atari Jaguar Consoles and Games! Come for the Savings, stay for the Service! The Rainbow ends at Bravo Sierra Computers!

http://BensCatalogs.Atari.org Click Here to Save!

Hi, I'm Ben Smith, proprietor of Bravo Sierra Computers! I'm an Atari Dealer/Reseller who occupies a unique niche in the Atari World! Most Atari Dealers stick to just selling NEW, I also sell Used/2nd Hand Atari Goods! So not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you may not be able to find anymore at Swap Meets, Thrift Stores or even Auction Sites! And I sell for less! And unlike those who will remain anonymous! I test Goods before I sell them. So not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, partly because I'm the guy most people come to when they want to give their Ataris a New Home! I'm saving Orphaned Atari's from Oblivion! Goto http://BensCatalogs.Atari.org or Call (503)256-9974! I'm not asking a lot, I'm just trying to make a living and I'd like to earn your Business!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

We have an entire 800XL system intact for sale. All the hardware, software and games incl the original Ultimas 1-4. Has been stored for many years unused. Many books and manuals included.

We were going to put the system up for sale on e-bay, but decided to try here first and offer it to the Atari fans who are seriously interested in this model.

Please email us for digital pics of the system. Offers encouraged.

Thanks.

Bob & Diane

1861. Most-Used Atari Program(s)

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-31 12:21:05 UTC
From: LLppwhite@aol.com
Message-ID: <12e3f8fa.0503310421.74acf400@posting.google.com>
Source record: 11618

This could be a application, utility, or a game, but for the Atari.

OK, I guess we should also include a separate question/category for PC/Atari programs.

For me it's Basic XE. Turbo Basic XL would be a reasonably close second. But I often have need of the string array features of BXE/BXL, plus I use the "EXTEND" command of BXE frequently to give me more string space. I think OSS definitely "saved the best for last" with BXE. Too bad there is no compiler. OSS said (essentially) "too big, can't be done." Clearly you might have to impose some limitations on the features, but I have no doubts that it is possible.

As far as PC/Atari, it's APE for Windows -- hands down. It is sooo useful!

-Larry

Yes, that's exactly what they do, they collect the "sucker tax". But the saddest thing is, many use AirMail parcel post even when GPM Flat Rate would do much better. Up to 4 punds, GPM Flat Rate Envelope is just unbeatable value, and it's faster than AirMail. I mean, if you want to abuse me, at least use a better service (you still get to collect your sucker tax).
> But since you've found your cable, I can just wish you lots of fun.
> :-)
Thanks, I am looking forward to the fun - as I said, I was surprised at how good an 8 bit computer the Atari 800XL is. So many little details that make a huge difference.

I agree, Basic XE was incredible. It has a semi-complier built in with the
SPEED command which stores addresses instead of interpreting every line to
get to the intended next basic line to execute. I used Basic XE to program
my Advanced Level computer science project which drew graphs and solved many
equations and maximum/minimum values using a combination of numerical
analysis and binary search-type algorithms. Right now I only have the print
out of the program, I wish I had the electronic version still, but at least
all is not lost of it :)

1864. Lantronix UDS10

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-31 17:11:29 UTC
From: "Ronald J. Hall" <dark_lord@charter.net>
Message-ID: <pan.2005.03.31.17.11.28.992545@charter.net>
Source record: 11621

Okay, I finally got around to trying to setup my UDS10. I've got it plugged into my network:

Dlink hardware 4 port/wireless router. I logged into my router and gave the UDS10 unit a static address of 192.168.0.104, using the units MAC address.

3 comps are on this network already, all running Mandrake Linux. I opened up eterm on my main box and telnetted into the UDS10 and used the config to give it a permanent ip address of 192.168.0.104 and set the gateway to the router (192.168.0.1).

After the UDS10 rebooted, I've got 2 green LEDs, presumably normal network function. I can ping it, I can log into the HTML config pages with Mozilla.

So...at this point can someone remind me of what settings seem to be optimal for using it with an Atari? I know this is 8bit country, but I'm planning on plugging a MegaST into the unit. Hopefully, eventually, I might be able to get my BBS back online with it.

I guess I'm also going to have to set my router to point to the UDS10 address of 192.168.0.104, correct? I mean, thats a reserved ip address on my internal/local network and nothing across the 'net is going to find that. I've never had experience with doing that before.

Thanks all.

1868. Re: Ben's Atari Birthday Bash!

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-31 21:05:02 UTC
From: You <you@cogeco.ca>
Message-ID: <BE71D02E.697%you@cogeco.ca>
Source record: 11625
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

That's what I mean. If 50 to 100 people were to send Ben the same email, he'd get the message.

These are my observations:

a) Ben provides email addresses in all of his newsgroup posts.

b) Ben does not appear to reply to any messages on the newsgroups.

From these observations, it is possible that Ben does not even read the newsgroups. I would hazard to guess that he spams the newsgroups and leaves. If Ben wants anything from the usegroup community, he expects the newsgroup community to contact him directly.

This is my rationale:

Nobody appears to police the newsgroups. This is both good and bad; nobody interferes with the newsgroups but the newsgroups are open to abuse. Therefore, it is up to the newsgroup community to police their own respective newsgroups. If constant and considerable SPAM is occurring in a particular newsgroup, it is up to the users of that newsgroup to make it known that Spam is not welcome.

Another observation that I have made:

c) Ben crossposts his Spam to several newsgroups.

So, from these observations, I would conclude that the "No Spam" or "Limit Spam" message must be taken directly to the spammer. You could build your "Anti-Spam" forces by enlisting the aid of the users of the other cross-posted newsgroups.

If Ben iqnores a proactive approach by the members of the newsgroups that he is spamming, then that says alot for Ben and the type of business that he is running.

Just my thoughts on the matter.

BTW: I am willing to participate in this "proactive" measure if anybody else is willing to join me, perhaps we can achieve some satisfactory results for all involved.

1869. Re: Us cartridges being used with a uk 8bit

Newsgroup: comp.sys.atari.8bit
Date: 2005-03-31 21:14:20 UTC
From: You <you@cogeco.ca>
Message-ID: <BE71D25B.699%you@cogeco.ca>
Source record: 11626

I wasn't speaking specifically of software cartridges rather, ingenius uses
for the cartridge ports of the Atari 8-bit.

Besides, most of the stuff that you're picking up at US distributers like
Best Electronics, are either very old North American software or relatively
recent European software.

I don't know why this is and I'm not even going to offer a guess as to why
this is... I'm just sharing an observation. My observation is: If
there's something new to come out for the Atari, it will most likely
originate from Europe. Have you made an observation that would contradict
this?

My 10 Favourite Atari 8 bit games: yeah, I'll keep the "u" in favourite
'cause I get a kick out of you foreign folks! :-)
Thanks for refreshing my good memories!

1. M.U.L.E.
2. Archon II
(hey, good choices, tom!)

3-10 = No Particular Order

World Karate Championship
Hockey [I don't remember who made it, but it was the lamest looking of them
all.....Gamma? Was that it? It looked like Dinosaurs playing hockey]
Microleague Baseball
Alternate Reality (the city)
Ultima 3, IV
Montezuma's Revenge
Bruce Lee
Blue Max

-z-
....with an honorable mention to the game that came in 11th place......Flak.

You <you@cogeco.ca>:
>I wasn't speaking specifically of software cartridges rather, ingenius uses
>for the cartridge ports of the Atari 8-bit.

Well, yes, there is the USB cartridge (designed by some guys from ABBUC,
but built and sold by Steve Tucker in the US.) The MyIDE interface
cartridge too, that's from Europe. Hmmm, any more lately... part of the
problem is we don't hear about all the stuff they are doing over there.

There is the AtariMax flash cartridges (one of the best innovations for the
Atari 8-bit in recent years, IMO) from Steve Tucker in the US.

>Besides, most of the stuff that you're picking up at US distributers like
>Best Electronics, are either very old North American software or relatively
>recent European software.

There was Castle Crisis, and Beef Drop via AtariAge, the AtariMax flash
cartridges I mentioned earlier, Sunmark was releasing its own multicarts
too, as well as Insta-DOS and a repro Rtime8 cartridge.

>I don't know why this is and I'm not even going to offer a guess as to why
>this is... I'm just sharing an observation. My observation is: If
>there's something new to come out for the Atari, it will most likely
>originate from Europe. Have you made an observation that would contradict
>this?

No. I guess I took your comment too literally when you mentioned
cartridges software specifically.

There is a lot of activity in the European scene, definitely! On the
cartridge front though, they don't seem to be releasing stuff that way
(well beside Nir Dairy who does (did?) a lot of cartridge conversions), but
rather on disk or via the 'net.

There's a few specific titles I'm looking forward to being released out of
Europe/UK: IK+ and Space Harrier!

The one's I use the most . . . hmmm...

For the Atari, in my case it is BBS:Express Pro v2.1a - heheheh

I guess I'd also have to say SpartaDOS, Hardback and Panther.

For PC/Atari? A800Win and A800Win+ and APE/ProSystem.

I had some thing like this happen with an old PerCom Data drive and all I did
was to clean the part that touches the disk with a little alcohol and it
worked.

For the 8-bit it is 800XLDJ. This program I run on my Atari ST or Hades. It makes an Atari 8-bit computer think my ST or Hades is a disk drive. I use the same SIO cable that everyone uses with APE. I have tons of games I play on my 130XE. The one that comes to my mind is "The Tail of Beta Lyrea".

1886. DGS Atari 8-bit CD-ROM $6 Weekend Special *LAST CHANCE*

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-01 19:30:13 UTC
From: Dean Garraghty <dgs@clara.net>
Message-ID: <1112383795.19926.0@lotis.uk.clara.net>
Source record: 11637

Hello All,

This weekend (until 3rd April 2005) I will be offering the DGS Atari 8-bit CD-ROM (commercial and PD combo) for the special price of $6 (2pounds for UK buyers), which is a $4 saving on the usual price. This price includes Airmail shipping to any country (first class post for UK buyers).

This is the last time I will be able to offer it at this price. UK postal charges are rising on 7th April, which will make it impossible to offer it at such a low price after then.

If you don't already know, the CD contains most of the DGS commercial Atari 8-bit products and the full DGS PD library (191 double sided disks). The commercial products include the PPP products QUICK programming language, SAM 80-col GUI (no extra hardware required), and games, along with the Digi-Studio digitized music package, all 26 issues of the DGS newsletter, and more. All products are in both DCM and ATR format, and have PDF versions of the manuals. A copy of the video we shot at the 1996 AMS show is also on the CD in MPEG-1 format. Full details with descriptions and screen shots are available on the offer page (shown below).

This offer is for readers of this newsgroup, so to get the special price you will need to go straight to the offer page:

http://www.dgs.clara.net/cdrom-a8.htm

Payment is by PayPal only, and there are payment buttons on the page. If you prefer, you can PayPal the money directly to me if you don't like using direct payment links.

Please be aware that this isn't some sort of trick or con, and I'm not intending to run off with your money! Despite the fact that I've been trading for 17 years, people still don't seem to know who I am. There's plenty of background info on DGS on the main part of the website, and there's also a link to an independent review of the CD.

Dean Garraghty

It was definitely like this a few years ago, but Atari 8-bit apps have
been ramping up, I guess as part of the general "old computer/video game
homebrew scene." (Examples I can think of right off the top of my head:
Beep Drop and Jelly Beans. I /believe/ they're both of US origin! ;^))

I do agree that the 'insane' hardware hacks seem to be mostly from Europe,
with things like the AtariMax Flash Cart being an exception, and the
AtariMax USB Cart being put together by both ABBUC (Europe) and
Steven Tucker (US).

Source record: 11640

Evening *.*!

Sorry if this has been covered before.

One of my 1050s won't format disks or write anything. I just get an ERROR-144, like the disk was write protected.

Anyone who knows what could be causing this and how to deal with it? The photo sensor, maybe?

Cheers,

Frank

I already did this.

BTW, reading is okay. But when it comes to writing the drive won't even
spin.

144,

Frank

Can't be, it is reading. Needs to sense track 0 to read.
I'd guess the write protect switch/sensor is sticky or
bad. Could be a pull up resistor connected to the write
protect is bad also.

OK, if you checked *ALL* the other stuff you may want to replace the trasistor arrays. They are something like an RCA3086 for a part number, look at a schematic to make sure. I think there are two of them in there. Very rare, but they do burn out every once in a while.

1894. Infogrames/ATARI just announced the ATARI DTV !

1896. TCPSER4J Modem Emulator development

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-02 06:34:33 UTC
From: Jim Brain <brain@jbrain.com>
Message-ID: <424E3CCD.7090501@jbrain.com>
Source record: 11503
Cross-posted to: comp.sys.cbm,comp.sys.atari.8bit,comp.sys.apple2,comp.emulators.cbm

To address some limitations in my tcpser modem emulator
(http://www.jbrain.com/pub/linux/serial), I've been working on a new
version that is Java based.

Firstly, comments about any hate of Java should be directed to /dev/null
or similar :-)

tcpser4j is a piece of software that runs on a PC/Mac/Workstation and
turns a regular rs232 port into an emulated Hayes compatible modem.
Instead of dialing out over phone lines, this modem uses TCP/IP for the
connection. tcpser4j can handle both incoming and outgoing calls. It
is most useful to place vintage BBS systems online as telnet BBSes.

The original version of tcpser was a single 'C' codebase, but to get
Win32 support I needed cygwin1.dll. That is a problem at times, and
there are a number of older versions of the DLL out there that do not
work with the app. As well, baud rates less than 300 seem to be
non-functional in the DLL. I can't legally redistribute the DLL in my
archive either.

Moving to Java addressed those issues, and it also allowed the codebase
to become more dynamically loadable, or reloadable.

The new version contains the following features found in the original:

o Multi-platform support
o Support for all normal and extended Hayes AT commands, including
multi-command strings
o Proper S register support, including changing line terminator,
linefeed char, guard time, etc.
o Correct AT command response codes, including abbreviated numeric codes
and Hayes Smartmodem limited response code emulation.
o Tracing abilities (see what is being sent on the wire)
o Phone book aliases (alias 555-1212 to servername:portnumber)
o Multi-line support (multiple "modems" listen on one IP port, like
modem pool)
o Proper DCD support (with modified null modem cable)
o Very good Hayes modem emulation
o Inbound and outbound call support
o Support for sending text files or raw text to local and remote sides
for events like BUSY, ANSWER, TIMEOUT, NO_ANSWER, etc.
o Support for inverting the DCD line
o Proper support for +++ Hayes escape sequence
o Support for handling NVT sequence negotiation when "dialing" telnet
servers

The new version hopes to better the original in a number of ways:

o Java codebase, can be run on any platform with a 1.2+ JRE
o Uses the RXTX Comm Library, available for most platforms.
o Extensive logging flexibility. Users should be able to cater logging to their heart's desire
o Better support for AT command set. Default S register setting and querying now supported, for example.
o Multi-modem bank support (configure 2 modems on 1 port, 3 on another, etc.)
o XML based configuration file easier to use than command line switches
o Phone book aliases now loaded from file.
o Multiple Phone books, with phone book delegation. Modem has a modem book, which checks pool book if no results. pool book checks master book if no match found in pool book.
o Support for remote administration GUI
o TCP232 option. Connect to the server via TCP/IP port and issue AT modem commands. This is best used with an emulator like VICE that emulates a rs232 interface by conecting to a TCP/IP port. It can also be used to test modem operation. DCD operation is not supported in this mode.
o Remote232 option. This allows one to use RS232 ports on on the local machine. If your BBS or vintage PC is by another PC, but you want tcpser4j to run on a server, use this option. the RS232 port need only be on a machine reachable via TCP/IP, so it could be across the house, the state, the country, or the world. All control lines are preserved in this mode.
o captive modem support. If configured, soft-modem will listen to IP port and real modem. This will allow existing dialup BBS systems to add telnet option while preserving dialup user support. In this mode, if telnet access is active, captive modem will be placed off-hook, and will be placed on-hook when telnet user logs off. Outbound calls will also be routed, so atdtjbrain.com will go out over IP, while atdt431-7754 will use modem. (this is still under development)
o Better support for +++ sequence timing.
o Support for extended error code reporting (i.e.: "NO CARRIER (Server Refused Connection)")
o Support for adding new modem commands to better emulate specific modem variants

I'm pretty much done with the base code, and am looking for some folks who would be interested in helping to test this codebase in some situations with different vintage platforms and send bug reports. As it's an all-new codebase, I need to do a shakedown. Initial testing has been good, but I only have so many test scenarios here.

I'm also interested in ideas folks might have. Some have asked for hooks to add a chat room in the unit for folks who get busy signals when dialing in. I'm looking into that option, and some others. Most will be support via dynamic classes.

Finally, I'm looking for someone to help with the Remote GUI Administration component.

The codebase is available at:

http://www.jbrain.com/pub/xplatform/serial/tcpser4j-2.0alpha.zip.

Windows users need only unzip and execute run.bat. Other platforms need to install the appropriate RXTXComm JNI library (http://users.frii.com/jarvi/rxtx/) for that platform and tweak the run script to suit. Since I can redistribute the RXTX codebase, I may add the various libraries in a later release. Please send run scripts for other platforms.

Notes:

I preloaded all of the telnet BBS systems I know of into the master phone book. Please help me add to the list.

As well, I created my own protocol for encapsulating serial line status into a TCP/IP datastream with the serial data. I had once saw another application that provided remote serial ports, but was unsuccessful in finding a current reference. If someone has a link and the existing protocol will work for this project, I will change my code to use the existing protocol.

I have not prepared a proper README file for tcpser4j as yet. Please use information from the current tcpser project archive, or email me if you have trouble.

I have tested the IP232 port option with the WinVICE emulator configured to send serial data to a remote IP port. VICE 1.16 has bugs with TCP/IP serial option, but 1.15 works. However, I have not yet been able to test the ACIA IP emulation in 1.15, and the user port emulation fails if custom RS232 routines (the George Hug routines, for example) are used. Normal KERNAL RS232 works fine.

1897. Some Success with the XEP80

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-02 15:05:02 UTC
From: Larry <LLppwhite@aol.com>
Message-ID: <1112454302.907838.93500@z14g2000cwz.googlegroups.com>
Source record: 11504

I have had some pretty good success with the XEP80 -- not perfect, but better than I've ever had before. Here's what I'm using:

Win-TV GO, using its composite input to "capture" the XEP80 output.
DScaler 4.1.11

I had tried this combination before, but was still not able to get the 24th line on the bottom of the screen -- maybe 1/3 of the line, which is not enough to be useful. I finally was able to finesse the settings and get all of the actual text pixels for all 24 lines. I can't touch the 25th line, but that's not a big loss since *very* few programs use the 25th (status) line.

The video has a little "shimmer" to it, but nothing very bad, and playing with the contrast and brightness makes the picture quite acceptable. The picture is not quite as good as one gets from a stand-alone upscaler, but I have yet to get all 24 lines on *any* upscaler. I'm not finished testing capture devices, but being able to get the whole 24th line is a BIG step. Incidently, DScaler produces a scalable window on the PC display, so you can make the display as large/small as your display allows.
-Larry

I finally have my bbs online. I'm just in the process of setting it up and it has almost nothing available on it yet. If you want to check it out, the url is: 24.57.167.178 and it's port 23.

So just Telnet on over to 24.57.167.178 and check it out. I'm working on adding a huge Atari file archive and a bunch of Atari specific message bases. I'm also working on making the Atari newsgroups available, once I figure it out. The system is plain jane right now but that will change over the next couple of days.

I'm setting up a chat section too. It's actually kind of cool... once I get it working.

Bill:

Yeah, I'm still working on it. I just added a bunch of message bases and an option to leave feedback to the admins. I'm going to be adding some other stuff today as well.

I really only posted the url so that I could be sure that there were no connection issues to contend with. For the most part, it's a work in progress.

I will keep you folks updated as I add stuff to the system and let you know when it's somewhat "substantial."

In the meantime, if anybody wants to login just to check the progress, you can do so by using the following username & password:

Username: guest
Password: guest

For the moment, the guest account gives users access to everything but the sysop stuff, so you can fully explore the system.

Thanks for giving it a try.

Good afternoon all,

I can write ATR images to disk without a problem, but ive a XEX file that I want to put onto a disk.

I assume the xex file (its a game) is the 'programme' bit and I need to 'bootable' part.

I use the Atari Rom File designer programme, so any help greatly appreciated

Okay, I've added some file areas to the bbs. There aren't any files
available to download yet, but that's a mere technicality.

I'm going to be working on the "chat" module so I can get that up and
running tonight or tomorrow. The chat thing is kind of cool. It lets all
of the connected users chat with each other and even create "private" chat
rooms.

In addition, I'm hoping to get a "library" of technical information and old
online magazines on there as well. I'm aiming to make this bbs the
ultimate repository of Atari stuff.

Online games and polls should be available by the end of the week and I'm
hoping to start loading up the file areas with just about any Atari file I
can find.

I'm also going to be working on making the bbs a little more pretty. As
I've been adding features to the system, I've just been half-buttedly
winging the menus. Fear not, I'm going to put some real effort into making
this bbs look good too.

Thanks,

Well, I don't know anything about Atari Rom File designer, but an XEX file
is just a regular Atari binary load file (usually). I know of at least one
utility to make an ATR out of it, called MakeAtr (search on the web you'll
find it.)

Also, you could just create a standard DOS2 disk and rename the file
AUTORUN.SYS. If that doesn't work because it needs a lower memlo or
something, there are other "game dos"es around. I think one is called
"picodos" you could search for that.

Is it possible to write it to another ATR in emulation,
then write that ATR to a real disk???

>
> -Larry

For a while it was pretty much MyCopyR (sector copier) plus APE for
Windows combination. Had to port my disks to ATRs.

I had about the same number of tapes as disks so WAV2CAS got a lot of
use. My tapes were in bad shape so I didn't recover many. Still, I
used WAV2CAS a lot.

Now that the porting is done I still use APE all the time. I use ATI
Media Player just as much because I use an old ATI All-in-Wonder video
card as my Atari's monitor.

MyDOS is my favorite DOS but I use SpartaDOS/BWDOS/Micro Sparta DOS to
make large bootable images. I spent some time gathering my old
collection of binaries into a single compilation then I spent even more
time converting the old Yogi disks into MSDOS. (That's Micro Sparta
DOS not the M$ thing). I prefer MSDOS's long title function and I also
prefer single drive booting vs. Yogi's separate utility disk and
program disk combination.

I've been using MakeATR and WriteATR all along. I wouldn't be without
either utility.

I'll be playing with and relearning Action! now.

I guess I wasn't able to decide what Atari program and PC program for
Atari that I use most.

LOL!!!!

On Sat, 2 Apr 2005 at 22:05 -0500, "You" scribbled:
->I finally have my bbs online. I'm just in the process of setting
->it up and it has almost nothing available on it yet. If you want
->to check it out, the url is: 24.57.167.178 and it's port 23.

Another poster was rather negative about this, but my reaction is more positive. I found it easy to telnet to 24.57.167.178 and take a look around as a "guest." Of course, the BBS is just beginning but let's hope the sysop sticks with it.

->I'm setting up a chat section too. It's actually kind of cool...
->once I get it working.

I got into chat mode with the sysop -- just like back in the '80s! <grin!> I'd forgotten the commands we used to use on BBSes 20 years ago (remember "/s"? or "?") but it was kind of fun being back on an "Atari BBS."

hmmm,
afaik the 1050 has different "heads" (like a tape recorder) for reading, writing and formatting. I have the same problem here, one of my 1050`s reads fine, but it formats only sh*t and then cannot write to this. but when I format a disk on another 1050, the faulty 1050 reads and writes fine... kinda reminds me of the XF551 index hole problem, maybe the sensor of the 1050 which produces the index is faulty, maybe it is the format head which is defective... -andreas.

Last rites declaration of Ioannes Paulus PP. II (Karol Wojtyla)
2nd April 2005

--
of the Red Sea.

God has, then, shown by the deliverance from Egypt, and from the sea, by the defeat of kings, by the manna, by the whole genealogy of Abraham, that He was able to save, to send down bread from heaven, etc.; so that the people hostile to Him are the type and the representation of the very Messiah whom they know not, etc.

He has, then, taught us at last that all these things were only types and what is "true freedom," a "true Israelite," "true circumcision," "true bread from heaven," etc.

In these promises each one finds what he has most at heart, temporal benefits or spiritual, God or the creatures; but with this difference, that those who therein seek the creatures find them, but with many contradictions, with a prohibition against loving them, with the command to worship God only, and to love Him only, which is the same thing, and, finally, that the Messiah came not for them; whereas those who therein seek God find Him, without any contradiction, with the command to love Him only, and that the Messiah came in the time foretold, to give them the blessings which they ask.

Thus the Jews had miracles and prophecies, which they saw fulfilled, and the teaching of their law was to worship and love God only; it was also perpetual. Thus it had all the marks of the true religion; and so it was. But the Jewish teaching must be distinguished from the teaching of the Jewish law. Now the Jewish teaching was not true, although it had miracles and prophecy and perpetuity, because it had not this other point of worshipping and loving God only.

676. The veil, which is upon these books for the Jews, is there also for evil Christians and for all who do not hate themselves.

But how well disposed men are to understand them and to know Jesus Christ, when they truly hate themselves!

677. A type conveys absence and presence, pleasure and pain.

1920. atari++ 1.41 released

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-04 14:05:52 UTC
From: Thomas Richter <thor@mersenne.math.tu-berlin.de>
Message-ID: <d2rhk0$i1g$1@mamenchi.zrz.TU-Berlin.DE>
Source record: 11526

Hi folks,

it's update time again. After quite a long period of silence, a new
release of the Atari++ emulator for linux and windows has been released
for download at its usual location:

http://www.math.tu-berlin.de/~thor/atari++/

What's new this time:

- A couple of nasty bugs have been fixed. The Vertical Blank line was
off by one, causing one intro to fail, GTIA "bogus Antic F" emulation
was not enabled properly to some degree. Antic "out of bounds"
scrolling had one bug in Antic 2,3,4 and 6. The built-in Os had a
couple of minor bugs in the CIO emulation.

- The emulator features now an (still experimental) 65C02
CPU emulation.

- For the Atari2600 emulation, joystick buttons can now be
remapped to "keyboard" events.

- The monitor provides shortcuts by the function keys.

Have fun,
Thomas

What made you end up with kernel driver? Critical timings? If so - it might be quite tricky to keep them right when communicating via USB/firewire<->rs232 adapters...

Yes, exactly.

First of all, the serial driver in Linux has an awful high latency,
which breaks correlation between received characters and the modem
status line(s). For example, in highspeed mode you might observe
the /Command Line going low, then high, and then you receive the
5 bytes command frame. That's not quite what you want :-(

Even if you configure the serial driver for low latency, the
performance isn't much better.

Another very practical thing is that you can get a notification
(i.e. an interrupt) when the /Command line goes high (which
marks the end of the command frame). At this point you can have
a look at the received bytes and then tell if it is a valid
command frame or if there were too many errors (which means that
you are possibliy running at the wrong speed). When receiving
bytes, you can check the /Command line and the receiver status
register of the 16C550 for framing errors. This way it is
very easy to automatically switch between standard and high speed
SIO.

If the user space application answers too late (eg due to a
heavily loaded system or thins like that), the kernel driver
checks if the maximum answer time has already elapsed and if
another command frame is already arriving (or has arrived).
In these cases the answer (ACK/NAK) from the user space app
is discarded and an error is returned.

Yet another important issue (at least with the Linux serial
code, maybe also with other operating systems) is that there's
no easy way to wait 'til the transmit FIFO has emptied (i.e.
until all bytes were _really_ transmitted). The "flush buffer"

command(s) only apply to the software buffer/queue, but don't
look at the chip's FIFO and/or the chip's transmit holding
register status.

Using an external controller connected to the USB/1394 port would be
a possibility, but one would have to implement a quite sophisticated
protocol (similar to what's done inside my kernel driver, eg
additional checks for timeouts etc.) to ensure reliable operation.

Just for fun I implemented the 1050-2-PC protocol purely in user space
(this code is also included in the Atari++ emulator), but the
kernel space implementation in AtariSIO is definitely more robust -
although it works quite fine. But then, the timing constraints when
talking to peripherals is much more relaxed than the other way around
- a purely user space peripheral emulator would be a disaster unless
you use a realtime operating system.

so long,

Hias

Thank you very much for the clear and thorough explanations. The problem here is very much similar to that of CBM users. The ultimate answer seem to be only a kind of active interface with uC, which can take on the protocol handling. With more modern Apple (and other brands - but we still have the "Mac" in the subject :-) hardware, there is no more rs-232 or even rs-422 hardware interface anymore. Regular (high latency) RS-232 operations are ensured via usb/firewire adaptors but this adds even one more layer of separation from the actual bits being sent/received and of course it doesn't help with such heavily timing dependent communication protocols...

OTOH I wonder how difficult would it be to port your kernel-side code to an Atmel or so? I assume it is written in C... yeah I know that C doesn't mean that much here ;-)

Ron:

Configuring the router is not that tough if you have a decent router. I, apparently, have a really crappy router from Network Everywhere.

I didn't have to screw with my router because my ISP gives me three IP addresses. I just used a LinkSys five port switch connected to my cable modem. My bbs plugs into the switch and is assigned an IP address from the ISP. My router is plugged into the switch as well, it is also assigned a unique IP address by my ISP. My entire Network resides on the protected side of the router. i.e. none of the ports on my router are open.

If you're not lucky enough to be assigned multiple IP's from your ISP, you will have to open port 23 on the internal IP that your bbs will be running from. You will have to configure your router to forward all port 23 connections to the IP address that you, or your DHCP router, assigned to your bbs computer.

It's not that hard to do if you have a fairly decent router. Like I said, my router appears to be a total piece of crap. There is a firmware update available for my router but all reports I've read indicate that this update converts the router from a reasonably functional piece of networking equipment to a useless paperweight.

Actually, I couldn't believe what I was reading when I did research on my router. There were people who said that their Network Everywhere router needed to be reset every couple of hours, there were people that said that the router would "lose" the network, and, of course, everybody complained about the firmware update that fried their router.

That is correct. However, if you look around a bit, you'll notice that
there's not much of an ANSI mode either. I'm more concerned with function
right now. It's still in the early stages, so I'm more concerned with
getting things to work than I am with making things pretty.

All in good time.

That does not sound right... The 1050 head is very small and
looks to have no more than one set of wires connected. I must
believe one circuit is used for reading and writing and
formatting.
Does anyone know for certain?

"Bill Garber" <willy46pa@comcast.net>:

>Is it possible to write it to another ATR in emulation,
>then write that ATR to a real disk???

Well, yes, you could boot your emulator, mount your ATR and copy a binary file to it from another ATR or the H: device and then use your 10502PC cable/setup to write a real disk.

What I do, usually is use APE's PC-Mirror function to access any binary files on my PC hard drive, usually from SpartaDOS or MyDOS.

Sorry about the last message... :) I was thinking about MyDos, use that a
lot, but I figured that Bobterm and Ice-T would work across whatever OS I
used, so therefore slightly more important. :)

Not that I use anything else other than MyDos at the moment.

> For me it would be MyDOS, hands down. No matter what I'm doing
(loading games, developing, playing with non-boot-disk demos),
I fire up MyDOS first, then insert the disk in question. <

Yes, the dos incredibly important, and in the same vein -- the OS. I honestly never considered those in my original question. But based on the original quesion, those are perfectly legitimate answers. I'm a MyDos guy, myself. But occasionally I have need to fire up SDX, and "X" does have some really nice features.

Slightly OT, but some years ago, I got a bunch of C64 stuff from my sister, and after dealing with the stock 1541-type dos for a bit, I wrote an "Atari-dos" type menu for it in compiled Basic. Certainly was not as clean or transparent as modern Atari dos's, but it sure made things easier to use (for me) than the "stock" system. I eventually got some "Jiffy-Dos" roms, and that helped things immensely.

-Larry

1940. New production MyIDE with 1mb flashrom (bootrom!)

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-05 10:37:35 UTC
From: mr-atari <sijmen@mr-atari.com>
Message-ID: <1112697455.485830.271040@f14g2000cwb.googlegroups.com>
Source record: 11547

Hi guys,

Steve Tucker and I have made a new production of MyIDE-interfaces in a cartridge. The cartridge also has a 1 Mb (megabit) flashrom. The flashrom will be sold standard with MyIDE-3.2F, basic rev_c and assembler. This setup makes the cartridge 100% plug-and-play. When you don't need the boot-OS, you can flash the cartridge with any other software to you liking.

Pre-orderprice is set at 49.99 USD (40 euro).

www.mr-atari.com

Kind regards,
Sijmen (aka mr-atari)

DAMN! Okay, first of, my birthday is in May, for anyone who cares. ;^) ;^)

Secondly, I'm really not that familiar with the MyIDE setup. Would it be
easy to construct (or use a pre-made) Compact Flash memory card reader
with this?

> doesn't mean that much here ;-)

I'd guess you should be able to reuse some 30-50% of the code. The rest
is Linux specific stuff (like spinlocks, process signalling and so on)
and low-level hardware stuff specific to the 16C550 serial chip.

The interface to the userspace app is already block/message oriented,
so an additional layer (like using USB or IEEE1394) is possible, in
theory.

Practically, one should first check if it is possible to operate within
the timing constraints of the SIO protocol: the maximum allowed time
to ACK or NAK a command frame is 16msec. After the controller receives
the frame, it has to send it over USB/1394 to the computer where the user
space app needs to pick it up, check if its valid, and transmit the
ACK or NAK over USB/1394 to the controller.

16msec is not that much time, even on a modern computer. Raw processing
power is irrelevant (AtariSIO runs fine on a 16MHz 486SX), what counts
is scheduling and overall latency (kernel plus USB/1394).

so long,

Hias

The version I played with, would turn itself off on a normal boot. You hold option to enter the cartridge. What the final cartridge will look like I don't know. I assume that it will similiar to the translator cartridge, in that it will load a new OS rom and then turn itself off.

I got all my MyIDE software working with the cartridge and an internal MyIDE ROM.

I need to write directly to display memory because the OS I/O routines
are too slow. Can someone tell me how to find the exact beginning of
display memory? I can't seem to find it in the OS Manual

I do remember that it is slightly above MEMTOP and the the display list
is in there somewhere just ahead of display memory.

Right I'm using a fudge factor of 33 bytes above MEMTOP when using
graphics mode 0. This is OK for what I am currently doing but I might
want to use a different text mode and I would like a method for finding
the exact beginning of display memory regardless of the mode chosen.

Thanks.

Steve Sheppard

Thanks Russ and LP. Just what I needed.

I now see the information is on my De Re Atari programmers card. It was there all the time. I must have glanced over it a dozen time. The name given for those locations 88,89 ($58,$59) is SAVMSC. I guess I missed it because that name doesn't stand out, at least not for me.

Sorry to trouble you.

Surprisingly my old 400/800 OS Manual has no description for SAVMSC in the OS Equates.

Thanks again.

Steve Sheppard

Thanks for the interrest :-)

At powerup, the cartridge switches on.
-loads the MyIDE 3.2F from flash (F=flashload, 3.1 based)
-asks if you like to boot with
0 no cart 48k
1 basic (rev-c) 40k
2 assembler 40k
3 flashcart (*)
(*) I do not know if this will be supported by Steve.
The myide-part uses banks 0,1,2,3 of the flash,
leaving banks 4 through 15 free for others.
This option justs switches on bank 4 and jumps to it.
My idea was to give Steve the freedom to adjust his
flash-program to pack any type of exe into this part
of the flashrom.

MyIDE-status will be permanently shown on screen. Just for
you to see if the drive is powerup and ready to go. Then
press 0,1,2,3 to start your atari-session.

holding OPTION will bypass the flash-rom, for easy reprogramming.

No warrenty how the end version will be, since I'm working on the
program ;-)

MyIDE supports standard IDE-drives and CF (zip not tested
by anybody yet). CF needs a CF-to-ide-adaptor. Theoretically
all devices following the ATA-protocol will work.

Kind regards,
Sijmen.

There will be a new maxflash software kit that supports loading
the MyIDE OS at startup along with the -exepacker option. Using that
kit you will be able to create standard flash cartridge images that
contain in addition to the MyIDE OS, any other EXE programs you like,
such as Shawn Jefferson's IDE configuration programs.

Shawn has put a lot of effort into getting his programs to
run this way, so it should work out well. :)

In addition to the standard open source kit support which may or
may not be completely ready by the time the hardware is ready to ship, Mr.
Atari will be providing his own custom ide/flash cartridge images described
above. That image is already tested and working, and will be shipped with
the hardware.

Both the maxflash kit created boot roms and Mr Atari's custom boot
roms support loading the new OS and then booting with full memory
available.

Steve

1956. Basic XE Question

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-07 20:23:38 UTC
From: Jason Harmon <jharmon@us.net>
Message-ID: <uISdnXHjQsG3CsjfRVn-hQ@adelphia.com>
Source record: 11563

I am trying to use Basic XE under Atari800Win.

I have a ROM image that seems to work correctly, when I attach the Basic XE Extensions boot disk, it boots from disk and goes to Basic XE version 7.2. All seems to work correctly, until I attempt to access any of the procedures that are in the extensions (like FAST, PROCEDURE, etc) and then I get an ERROR 33.

Are there different versions of the extensions? I am wondering if the version I have doesn't match the 7.2 ROM. Are there any know issues using BXE under Atari800Win?

-Thanks

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

1961. Updated my BBS

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-08 05:26:34 UTC
From: You <you@cogeco.ca>
Message-ID: <BE7B8E4A.AF4%you@cogeco.ca>
Source record: 11568

Just a quick update on my BBS:

After being offline for a couple of days due to a crash, my BBS is back online at the same IP address. You can Telnet to my BBS at IP address: 24.57.167.178 port 23

You may login with username: GUEST & password: GUEST

I have added a Z*magazine library from the main menu. You can checkout the library by selecting command "H" from the main menu. The first 11 issues of the old Z*Magazine are currently available for viewing in the library. Alternatively, you can download archived copies of these Zmags from the new Z*Magazine file area in the file transfers area.

I will be adding the complete Z*Magazine collection to both the online library and the file transfer areas.

In addition, I have added a small number of games to the Atari 8-bit games directory of the file transfer area. I will be adding files to all of the file areas over the weekend.

I intend to add an online "Atari 8-bit Technical Information Library" this weekend as well.

My goal is to make this BBS the ultimate online Atari Reference.

1962. Re: Updated my BBS

I have been adding files to several of the file areas on my BBS. There are
now some files in the following file directories:

1) Atari 8-Bit Applications
3) Atari 8-Bit Games
6) Z*Magazine

I am now constantly adding files to my BBS for download.

My goal is to make this BBS the ultimate Online Atari Resource.

So, after so much work & effort - why would Marius shut down the BBS? Hardware issues? I know he had a few system failures..

Thanks.

According to the message I received from Marius, it was for personal
reasons. I'm sure he will enjoy coming back to it again when he has more
time to deal with it.

As the people who have logged in to my bbs today may have noticed, I have done a fair amount of work in the area of standardizing the look & feel of the bbs. In addition, I have added some help menus in some areas where they had been previously lacking (the email and message base areas for example).

I have divided the online Z*Magazine library by their respective years of publication and will be finishing up the Zmag library late tonight or early tomorrow.

I have found a bbs lister module for the bbs that allows other sysops to list their bbses but it will require some modification in order to support telnet addresses. I'm hoping to play with this sometime next week.

Over the weekend, I intend to spend a great amount of time adding files to the download section of the bbs. I am not currently allowing users to upload files to the bbs.

Hi there!

Does anyone of you louts know where I can find/download a map of AR - The Dungeon WITH all "places of interest" marked? The ones I've found on the various websites were just maps without much giving too much away i.e. only things like The Troll's Den, but no stairways, no enchantress etc.

When some are lost, can't find their way... (-;

Message-ID: <9947bb30.0504082214.7435fffe@posting.google.com>
Source record: 11576

Take a look at my ebay auctions and my ebay shop :

http://search.ebay.de/_W0QQfrppZ50QQfsooZ1QQfsopZ1QQrdZ0QQsassZrescueonfractalus

I have more than 20 boxed/new ATARI 800 XL/XE cartridge games and more
than 50 boxed ATARI 2600 games + several ATARISOFT games for PC and
Apple II and some Commodore 64 games.

The auctions are on ebay.de (ebay Germany), but I can ship worldwide
and accept paypal.

ATARI 800 XL games are NTSC and PAL compatible.C64 games are NTSC,
Apple II games are NTSC, too. Most ATARI 2600 games are PAL, but this
is mentioned in the descriptions.

Just so you know, the SuperDOS 5.1 image which is floating around
internet also doesn't work well my real Atari 800 when used with
SIO2PC. Loads the first 9 sectors, repetitively in a loop.

I can get SuperDOS to boot if I set Drive 1 in SIO2PC to
non-configurable (which I think forces SIO 1X mode).

I need no such tricks for APE for DOS (1.18). SuperDOS boots fine in
this case. Ape status indicates that SuperDOS is using XF551 reads
(command $D2).

I wanted to use SuperDOS because it's the only DOS I could find that
supports high speed SIO using a stock 400/800.

Source record: 11582

Hey Guys,

Here's a shot at a perfect working MIO? Now is the chance of a
lifetime. I have put one up on ebay. I ran a BBS with 2 MIO's and a
Blackbox in a network with the CSS Multi-plexer many years ago,
Multi-line. I took the BBS down in 1999 Pro node (449)

I dont have the room for a 3 computer Network so Im selling off some
rare :) stuff.

The MIO is the BEST interface to use with both Atos and BOSS-X
the MIO has 256k (external ramdisk) RS232 and printer port and the best
(FLOW CONTROLL) even better than the Blackbox with Len Spencer util,
so running a BBS at 19.2 is a dream.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=1250&item=8184372438&rd=1

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=1250&item=8184374705&rd=1

More rare stuff comming in a few days
Good luck to the winning bidder

You are absolutely right! Possibly - without adding some extra (256MiB
;-) of RAM to the interface - this might be another show-stopper. 16ms
is not _that_ little too, but as you wrote: the scheduling and overall
latency is what really counts here.

No,in the UK louts means a badly behaved ill-mannered person.

Maybe he made a typo when he meant to type "you lot"
and the spellchecker auto-guessed "you louts" instead.

> Maybe he made a typo when he meant to type "you lot"
> and the spellchecker auto-guessed "you louts" instead.

No, no, no, I already meant "louts". (-; It's just a nice and slightly
quaint word.

Meant an affectionate way, of course - or is it too late to say this now?

I'm German, so bear with me.

So, do I get my maps now, you old scoundrels? (-;

(I'd be better off get my NAPS now...)

1982. 5200 VCS adapter retrofit clarification ..

Newsgroup: comp.sys.atari.8bit

From: martians@sdf.lNoOnSePsAtMar.org
Message-ID: <d3cbjf$40q$1@chessie.cirr.com>
Source record: 11589

Hi, I'm installing the VCS retrofit kit on my 4 port 5200 and have gotten
it 95% completed, but ran into a descrepancy between the instructions
and whats actually on my board.

if you have the instructions, in figure 3 for step F (Solder cathode
of D2 (assembly 2) to C10) it shows C10 between CR7 and C9. However,
on my system board CR7 is followed by C9 and then C10 ..

Do I go by component location numbers or do I go by illustration?

I'd go by the numbers rather than pictures.
I would also tie one side solid with a long jumper
initially, and the other end, hold by hand. Then
run it with the hood open, and get ready to pull
that lead off quickly if it's wrong. :o)

The 4-port 5200 didn't bring the audio/video lines to
the cart port. The 2600 'adapter' (actually a complete
2600 minus power and RF) requires it.

Seems the adapter was a (desperate) attempt to keep
the 52' afloat. Not planned from the start.

Question: Is the sector layout of a MyIDE partition the same as an ATR?
I don't mean the conversion to physical hard disk clusters but rather,
does Atari see and access a MyDisk parttion as if it were the same as
an SIO2PC/ATR?

The reason I ask is I have the beginings of a sector copier, written in
Action. (Runtime version doesn't need the Action cartridge or image).
Just a skeleton of a program really, but I have confirmed duplicating
65,535 sector size ATRs on the emulator and 3,000 sector ATRs using a
real 800 plus SIO2PC software.

The program is very crude right now, no formatting and no buffering,
just raw sector copying plus verifying the copy. At present, copies
are made from D1: to D2: only. There's no logging. Basically, there
are no frills at all. Counts read and write errors (should not be any
with ATRs) and verification errors (ditto). That's all.

Using a PC utility to compare the ATRs I've confirmed that created
copies match byte for byte. I also successfully tested with real
floppies but my program is not ready for use with physical drives.
Without buffering there is a lot of head and motor activitiy, too much.
Not sure how much of an issue this would be with a hardrive but
probably not so good.

My program is not DOS dependent. It only copies raw sectors. Since the
program does not yet format disks/ATRs this has to be done ahead of
time. However, as long as the sector counts and densities are the same
the disks can be copied. Neither parameter is tested at present and
only double density disks/ATRs can be copied so far. The program just
tries to copy everything from the source verbatim.

The program theoretically has high speed SIO support for SpartaDOS but
I don't have an XL/XE, and SpartaDOS versions with high speed SIO don't
work on 400/800 (All I own is an 800). High speed SIO does seem to
work in Atari800Win plus (4.0 beta 4). Copies using SpartaDOS will
complete in about 67% of the amount of time the MyDOS copies do. This
is with the Atari800Win SIO Patch disabled, of course. (My program

does work with the SIO patch enabled but then the Atari SIO routines are bybassed altogether so Atari I/O is not really being tested).

High speed SIO is not as fast as I would have thought but I did not write the routines. I just let SpartaDOS handle the function on it's own.

I found some documentation for using high speed SIO with SuperDOS 5.1 but I'm having compatibility issues with SuperDOS.

On the 800, I have to disable high speed SIO with SIO2PC just to get SuperDOS to boot. If I try to re-enable high speed after booting the program does runsbut SIO2PC just translates the XF551 reads/writes back to standard reads/writes, so no speed up. APE for DOS sees th proper read/write commands. Unfortunately, I don't have a registered copy of APE and the free version won't let me write to ATRs at high speed only standard speed.

What all this means is high speed SIO is untested on a real A8.

In Atari800Win Plus (4.0 beta 4) SuperDOS won't boot at all so basically, SuperDOS high speed SIO is completely unverified. I'm setting aside the SuperDOS high speed SIO aside for now.

If you would like to play with my beginnings just email me at (st*e*phen s*heppard at hot**mail dot com, No *'s or spaces). I can have something presentable in a couple of days. I'll at least have prompts for drive numbers by then.

Everything is strictly pre-alpha (not even beta) and definitely not guaranteed to do anything you want. Use at your own risk.

If you mean "Download files from the BBS" use Ymodem or Xmodem-1K protocol
on the BBS. Pure xmodem doesn't work too well.

If that is not what you are talking about, then please elaborate.

I'm telnetting to the BBS through a LAN. Doesn't have x or y-modem.

As long as you go through SIOV, any reads and writes to MyIDE partitions
are redirected to the correct routine and conversion from raw sector to
Cylinder, Head, Sector is done by the routine.

So, yes, you should be able to use any sector copier that doesn't take any
shortcuts.

That could be a problem.

SpartaDOS has it's own vector for it's High Speed SIO routines. SIOV
is not normally used when one wishes to use the routines. Does the
special MyIDE version of SpartaDOS correct this?

2005. Atari800Win for BBS's

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-12 06:51:15 UTC
From: donfanning@msn.com
Message-ID: <1113288675.320070.290980@z14g2000cwz.googlegroups.com>
Source record: 11412

Greetings,

Alright, I have a slew of questions for you so I thought I'd let everyone take a poke at them and i'll peek at them later (pun intended) :-)

I'm trying to setup a BBS using Atari800WinPlus version 4.0

1.) Why doesn't the H: handler work inside SpartaDosX 4.22? I tried, H: (by default goes to D8: which requires a ATR) and H1:-H8: gives me "Error - $82". Yet if I punch in the basic program in the help file, no problem.

Wouldn't this be easier (in my hairbrained mind) to make a modified version of the ATR that looks like a hard disk platter and use HDUTIL to format the sucker and treat it like D3:?

2.) The R: Handler. I've has some limited success in telneting into the system using BobTerm inside the emulator. AMODEM 7.5 goes nuts and prints a bunch of hearts. Lovely, but it's not Valentine's Day. ;-) What are the normal (reliable) settings for the R: handler? I don't mind 2400 baud one bit (realism is what I'm going for).

3.) TODAMIS - Anyone have a copy? *wink*wink*. I know Trent wouldn't mind.

4.) What is the future for hardware support on this emulator? Anyone working on a MIO or BlackBox for the emulator? Are US Doublers supported? Even real serial port (rs-232) emulation through an 850 or a P:/R: box? (of course an MIO or BlackBox emulator would solve both). I would fudge if I could create an 8-bit BBS that could inhale UUCP/USENET feeds and transparently mirror FTP and File Libraries (along with network messages ala FidoNet like stuff). Got plenty of memory and hard drive space. Why not?

Thanks. I really miss my Atari. I'm sure my system is still floating out there somewhere but one day I'll set another up that's better.

hi,
use a term program that has telnet capability if you are using a pc.
for that I like ZOC myself. expensive but quite nice.

That brings back memories (double echo). I think you have Full
Duplex on and it should be Half, or the other way around.
If I remember, if you have Full on, then a half duplex board will
do double chars. If you have Half duplex, and the board requires
full duplex, you get no characters at all on the screen. Something
like that.

I don't use the H: Handler or SDX. H: support was very limited in A8W 2.5c.

>
> Wouldn't this be easier (in my hairbrained mind) to make a modified

This is what I do... I have 8 16 meg ATRs on my BBS = 8 hard drives. Using
the FAST SIO option, they are plenty fast.

>
> 2.) The R: Handler. I've has some limited success in telneting into

>
A8W 2.5c uses a socket-based R: handler which was added (or modified) by Tom
Hunt. There are no settings for this unless I ahve forgotten how to set
them - I set this thing up in 1999 and my memory was fading even back then.
Tom would know more about this than I.

> 3.) TODAMIS - Anyone have a copy? *wink*wink*. I know Trent wouldn't

I don't understand why emulating MIO or Black box or USDoublers is
necessary with the fast SIO and ATR support. However emulating a Happy 1050
or Archiver would be interesting.

As for the other stuff, someone with a800win plus experience needs to jump
in here.

2014. SpartaDos 3.x Manual?

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-13 02:57:32 UTC
From: Larry <LLppwhite@aol.com>
Message-ID: <1113361052.124893.311760@g14g2000cwa.googlegroups.com>

I've seldom used SpartaDos (only SDX -- a little), but right now I have a project going that requires 3.x. I have the SD Construction Set and its print manual, but that only covers versions 1.x and 2.x. I also have the SDX manual, but the various versions of Sparta seem to have just enough differences in commands/usage/compatability that I am "chasing my tail" -- or so it seems.

Was there a manual (print or .doc file) that covers 3.x?

Thanks,
Larry

>is not normally used when one wishes to use the routines. Does the
>special MyIDE version of SpartaDOS correct this?

The special MyIDE version of SpartaDOS is just a regular SpartaDOS v3.3a,
which doesn't have the high-speed SIO routines... so there is no problem
there (unless you want high speed SIO that is.)

There is a possibility of combining the MyIDE OS and the APE 3X routines
from Steve Tucker's APE WarpOS since the MyIDE OS doesn't touch the
Alternate character set. That's something that may be done in the future.

Thanks, but that is not the problem. My terminal (Bobterm) is set at
full duplex. It works fine with the other bulletin boards that I
telnet to (tcpipExpress, Familynet, for example).

Hello all, I have an external My IDE cartridge and have successfully initialized and booted off of my hard drive using MyDOS. However, I am trying to get things setup using the SpartaDOS on Mr. Atari's webpage for MyIDE. What is the process? I have Steve Tucker's warp os which includes the My IDE 3.1 OS and so I assume I won't have to patch the boot drive and or boot from the master disk once I get the files onto the hard disk. TIA

Hello, I assume you have got the download from MrAtari's homepage. Load
this ATR as D1: and then have hard drive partition D2: set for use as
Spartados. Run the program MY16D2.COM on the hard disk, then copy X33A.DOS
to D2:. Type the command BOOT D2:X33A.DOS. Now set partition again so
that D2: become D1: and reboot.
Enjoy

What what I understand, as I have an Internal MyIDE&drive but use the disk
to boot the MyIDE OS, is that when using disk images held on the HD, many
titles don't work properly due to the way the disk loading routines work.
E.g. Multi-boot XL menu's, multipart loaders I've not been able to load.
Because the OS replaces the Atari OS, the memory under the OS in an XL
becomes free again, so hence 64K games will work as their loading won't be
overwriting the soft-OS. I'm yet to try this out myself - but its the way
I want to go.

Regards,
Mark

Hi,
With the OS in rom many more programs will work with MyIDE. Instant booting with hard drive set as D1: There is a couple of programs available to swap partitions. I swap partitions to reboot between Mydos and SpartaDOS. Both DOS types have there own benefits (..) some programs work better with one or the other. But I like SpartaDOS better for running applications--- command line driven is just easier for my methods..
Enjoy

First of all, SpartaDOS v3.3a supposedly won't work with the "soft" OS. As
stated, the RomOS is more compatible with software.

Hi,
Use the program call myswap11.com and swap partition 2 and 3. Three will become D2: and 2 will become D3: and so forth until all partitions are formatted with 16D2.COM. Read the help file on the ATR you got at Mr. Atari's site.

You can use my utilities:

http://www.jeffersonsauctioneering.com/atari/myide/

MyIDE Config is the program that allows you to create, delete and swap
partitons around. This is version 1.1 that has some bug fixes over version
1.0 found on Mr. Atari's webpage.

MyIDE Image Manager allows you to manage your disk images with 30 character
descriptions, categories, etc... Version 2.1 now allows double density
images to be detected automatically as well as some other enhancements.

Please let me know any problems you have or general feedback on the
programs themselves.

Source record: 11442

Nope,
afaik SuperDOS (like Turbo-DOS XL/XE) does not work on a 400 / 800 Atari, it requires an Atari XL/XE computer. Hmmm, this might be due to the ultraspeed routines it uses (I guess this is done by copying the OS ROM to RAM and changing the normal/slow SIO routines to ultraspeed then; copying the ROM to RAM most likely requires a 64k computer). This might also be due to routines the XL/XE OS has - thats the case with TurboDOS, the DOS itself does not use RAM under the OS but it uses some of the standard XL/XE OS routines which are not present in the 400 / 800 OS (or maybe at a different place)... -Andreas.

P.S.: Tried booting TurboDOS and Superdos on a XL computer with the Translator installed - it did not work, both DOSses crashed (stopped booting) after some sectors... and err, since the translator emulates an Atari 400 / 800 OS, I guess it is the same there...

As I stated earlier, SuperDOS works fine on my 800 as long as I'm using DOS APE. Well, I can at least perform high speed reads but not writes (because I don't have a registered copy). I can't do any testing beyond what I have done as I do not own any XF551 drives or other drives that support the higher transfer speeds.

I would also appreciate a copy of the SD 3.2d manual via email. Thanks

I sent out I think to youse whose asked. I used to have these docs
on my web site, but my new ISP doesn't have a free website. I guess I could
hunt around for a free place to put the files. If I remember where I got
the docs for 3.2d, the person wanted to remain anonymous. I sent the
ASCII file. I also have two .ATRs that will print on one side of a page
and then you print the other side, I think this is for printing from a
real Atari.
Sorry I can't just give a URL any more.

Hey Russ - I can give you a subdir off of SlorNet if you like. You're
always quite helpful around here, so I don't mind giving back a little...

Source record: 11449

On Wed, 13 Apr 2005 at 02:40 -0000, cbc (Cabell) scribbled:
-> - he needs the equivalent of half duplex. the bbs echos all
->characters back to you.

This gets us back to the terminology of ye olde Atari days! I
love it! But seriously, some people may also know this as "echo
on" or "echo off" mode. Half-duplex means echo-off.

BTW, when I telnetted to "You"'s BBS it seemed like it was in
ANSI graphics. At any rate, text in different places was displayed
on my ANSI-capable terminal program in various colors, so that's
why I say it SEEMED like it was ANSI-compatible, altho there wasn't
much there yet.

Indeed going by the numbers and not the illustration proved to be the right path. And just for the record, I was able to compare my SBD with another 4port 5200 SBD and my revision had the swapped two components while the other board did not!

I actually caused a ground short on the jumper wire that runs from J1 pin 24 to L8 .. but only after I played for a couple of hours. It was when I put the RFI shielding back on. The edges are a bit sharp ;-) .. But anyway, it fortunately only blew the 5A 250V fuse inside the power adapter. I cracked it open (do Koreans use BAKE-O-LITE??) and replaced it and I was OK.. I've decided not to install the shielding..

Message-ID: <Sa_7e.4545$qO6.1819@okepread03>
Source record: 11451

Well, i've been playing around with it for several days now. Was able to create 4 16mb partitions and use the MyIDE SpartaDOS with them. Everything is working fine. I restored my HD images using sio2pc I had backed up from my mio/hard drive configuration. I used flashback with no problems.

Here's where i'm a bit confused. I tried to copy a group of files from partition 3 to partition 4 and it only copies 2 or 3 files. I go look in the source directory and it shows those couple of files, then garbage for the directory. If I just hit reset it displays it fine. If I use flashback to go partition to partition I get an error 165 after a couple of files. I also have a ramdisk. If I go source to ramdisk - no problems. Then if I go ramdisk - destination, no problems. Is there an issue copying multiple files between two partitions? I hope not.

My plan is to convert my Pro BBS to a MyIDE configuration and do away with the SCSI hd and mio.

Thomas

I had something like this happen to me once with one of my partitions. I
had to copy all the files back onto the partition. I will do a little
testing with my setup and see what happens.

What command are you using to copy? Just the copy command or another
utility? I've used Tom Hunt's RCOPY in the past.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

First I was simply using copy, then I tried flashback from ICD. It worked fine from .atr image to hard drive, and fine from hard drive to ramdisk, and ramdisk to hard drive. The problem surfaced when I went partition to partition.

:
:
: You have discovered the one and only f*cking bug in MyIDE system. I have
: tried to fix that one for hours and hours after debugging the myIDE os and
: analysing the whole myIDE routine step by step. After days I still did not
: found the problem. I have the feeling it is not possible to fix with the
: simple way myide routines are done. The destination files are filled with
: data from 'wrong' buffer locations. On small files most of the time an
: amount of hearts is filled in the destination files. So it is a buffer
: problem, and I think i think this is a compatibility problem. the DSTAT
flag
: handling is not very enhanced in the myide OS. The DOS (whatever Dos you
use
: doesn't matter, it goes wrong on all dosses) is confused after the copy
: operation, and that is why your 'source' directory is garbaged too. After
a
: boot the source directory is ok again.
```

:
: As long as you copy files from Myide PARTITIONS: Dx: to Dx: there are no
: problems (D1: to d1: from D2: to D2:) but as soon as you are copying files
: from Dx: to Dy: this problem occurs. When you are copying from SIO to
MyIDE
: there is no problem, and when you are copying from Ramdisk To MyIDE there
is
: also no problem.
:
: Unfortunately there are more problems with this 'bug'
:
: When you run an application from let's say D2: (Dy:) and you are using
this
: application, and you want to save your production (a large text file) and
: you save this on Dx:: (let's say D1:) it might go wrong as well, so you
have
: to say on Dy: (D2: in this case)
:
: So IF you decide to use MyIDE in combination with your PRO board, you are
: limited to only ONE partition.
:
: Marius

What you need to do is, buffer "D1:file" then copy this buffer to a second buffer and write this second buffer to "D2:file". This will prevent D1:'s buffer from being overwritten before D2: has received all of it. I had this problem in a database program I wrote in the 80's. Each drive/volume should have it's own buffer to prevent buffers from having incorrect data in them. :o)

I tested this out last night, and had the same problems that Marius
outlines. I tried both copy and rcopy. I had some success with XCOPY
though. I didn't do extensive testing with this.

On the subject of ICD MIO's, I've a question.

I have a 1 Meg version MIO and it has a port on the same side as the
RS232 and is labeled VIDEO.

Does only the 1meg versions have this port?

I've never seen it on a 256K version before or do I have
a extra rare MIO?

It appears that the problem effects sector copiers too. I have been
testing Stephen Sheppard's new sector copier with the MyIDE interface.
It works great for copying from ATR's to MyIDE partitions and I'd like
to thank Steve for the effort he has put in to this.

After reading this thread, I tried to do a copy from one MyIDE partition
to another. Since Steve's program displays the information it is
copying on the screen I was able to observe the following:

The program seemed to think that it was copying single density instead
of Double density sectors. Only 128 characters were displayed instead
of the 256 characters that were displayed when copying from ATR to MyIDE.

Also, of those 128 bytes, only the first 72 were changing, the remaining
bytes remained the same throughout the copy process.

Also, can some one fill me in on Atos and BOSS-X?

I'm setting up alot of my Atari stuff and plan on using my
MIO for a BBS. I have BBS EXpress, Not sure what
Atos and BOSS-X are.

And I need a SDX cart if someone has a extra for sale or
trade.

These are GUI systems. BOSS-X is written in Turbo BASIC and works with
MyDOS. ATOS works with SpartaDOS (and is faster IMO, but less colorful.)

Just out of curiosity, are you using the internal or external version
of MyIDE?
I would be willing to bet -- external/cartridge. Has anyone using the
internal/hard-wired version seen this same problem?

If I can get the files successfully written to the partitions by means of SIO 2 PC and Ramdisk, can I not go ahead and run the Pro BBS? I mean, there isn't alot of copying of one file to another partition happening is there?

Thomas

P.S. I guess I could just use my SCSI drive and the MIO. Does the MyIDE function as fast as a SCSI/MIO setup?

Hallo,

ich bin dabei, einen ATARI 800XL neu zu bauen und suche noch Anregungen oder Tips, um dieses Projekt auch fi¿½r andere Interessant zu machen!

Folgendes ist geplant:

1. 19" 2HE Standart-Industrie Gehi¿½use mit Backplane und Einschi¿½ben
2. 2 ATARI 1050 Folppy-Nachbauten mit integrierter Speedy1050
3. AD/DA-Wandler Karte
4. umschaltbarer CPU-Karte (ATARI-CPU, 65C02 + 65C816)
5. 64KB Arbeitsspeicher + 256KB RAMDisk als SRAM (RAMDISK Batteriegepuffert)
6. Bustreiber fi¿½r Adress-/Datenleitungen
7. Grafikkarte mit originalem ANTIC/GTIA
8. OS-Karte mit jede Menge EPROM-Pli¿½tzen
9. Cardridge-Karte mit jede Menge EPROM-Pli¿½tzen
10. PC-Keyboard Interface
11. Schaltnetzteil
12. RS232 mit MAX232/202
13. neue erweiterte MMU mit GALS
14. LCD Punktmatrix-Display 128x128
15. 16K BiboMon (Compy-Shop)
16. Centronics-Schnittstelle

Zuerst ne Umfrage wegen der Backplane:

Was wi¿½rdet Ihr nehmen? VME,ISA oder komplett eigene entwickeln?

Wi¿½rde mich i¿½ber Anregungen sehr freuen,

mfg,
Wolfram.

Hi Phantom,

BOSS X uses a system drive ie Ramdisk is better, so the external ramdisk in the MIO is great! Boss x loads fast from there.

You need to get BBS Express PRO! it has all the Kool stuff, like ansi/cgs/ and others. Also use Len Spencers Hyperspeed rs232 handler, it give the MIO the BEST flow controll ever!

I have just sold 1 of my MIO on ebay, I have 1 256k and a Black Box still.

2071. MIO Tech Help

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-18 03:13:38 UTC
From: Docrotcod <rahbart@cox.net>
Message-ID: <CBF8e.6984$qO6.2400@okepread03>
Source record: 11478

Well i've about had it with problems this week... I used this MIO and SCSI hard drive about a year ago. It had a bad sector or two so I reformatted it and reloaded the software, then put it away.

I took it all out and hooked it up. The MIO can't detect the boot sector apparently. It can't save the configuration or read it. I had an extra SCSI hard drive but I am not sure of it's history as I got it off of Ebay. So then I boot off my SDX cart and swap the hard drive to D2. Now when I try to access D2 it says bad sector. I think the hard drive just crashed.

I did hook up the SCSI cable backwards, but i've done that a dozen times over the years with no problem. Any way to tell? I would rather the hard drive be bad than the MIO.

Thomas

Update, it was a bad hard drive. I have one question regarding
partitioning. I know on the MIO you are supposed to add +1 to the ending
sector. Do you have to do this on the last partition as well?

I've never had a 1200XL before, but IIRC it uses a regular 9VAC power adapter. Is there any +12VDC inside, or is this a single conversion to +5VDC?

2076. More UDS10 questions

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-18 14:58:40 UTC
From: "Ronald J. Hall" <dark_lord@charter.net>
Message-ID: <pan.2005.04.18.14.58.39.456929@charter.net>
Source record: 11482

Hi everyone. I'm slowly coming to grips with the UDS10. With help from Marius, I'm learning. Thanks to Lantronix, I was able to use my Linux box to update via tftp to the latest firmware (No Windows needed - Yea!).

I'm still trying to get how and what the UDS10 is doing sorted in my mind though.

I opened up my Dlink hardware router so that the IP address assigned to the UDS10 is accessible from the Internet. At least I'm assuming it is. A sysadmin friend of mine let me into a subnet of his, where I then was able to telnet, using my wan IP address, into the UDS10s config setup. I could not just telnet into it though, even using the standard port, 23, which is what the UDS10 is supposed to be using. Should I be able to telnet into port 23 from the Net, even though no serial cable or Atari is attached to it? Its just hooked via rj45 cat 5 cable into the LAN right now.

What I get is "connection refused".

Thanks.

There are two 5v+ regulators inside the 1200XL. Half the components
draw off one, half off the other.

Source record: 11492

Hi Guys,

Thanks for the forum. I'm aware about this problem.
Like Marius, I can not find a problem with the MyIDE-code.
So why this problem occures is a complete mistery for me.
But it must be something to do with the constant partition
change during Dx: to Dy: copy.

The problem is only in version 3.x MyIDE. All previous
versions didn't had this bug... but many others ;-)

Currently I'm extremely busy with the 'MyIDE + 1Mb flash'
project I'm doing with Steven Tucker. My input is in
creating a MyIDE-OS that loads with the flash-rom and
can be used in Stevens software to create flash-images.

The current version MyIDE-3.2F looks better then the 3.1
But since the partition-code is't changed (yet) the bug
will be propably present here too. I'll check and come
back later about this.

Anyhow. As soon as I'm finished with this project, I'm
going to solve this stupid bug. I promise.

Kind regards,
Sijmen (mr.Atari)

Message-ID: <pan.2005.04.19.17.21.11.52442@charter.net>
Source record: 11493

Okay, using:

"telnet 24.177.21.201"
"telnet 24.177.21.201 23"

results in telnet: Unable to connect to remote host: Connection refused

while this:

"telnet 24.177.21.201 9999"

works, allowing me into the config setup for the UDS10.

Can someone please list the possible reasons/settings that would allow me
to access port 9999 from my ip address but nothing else?

Thanks.

2087. New Dutch Atari 8-bit site

Hi Atarians,

From 1990 until 1996 Stichting Pokey (the Pokey foundation) was the only Atari 8-bit support group in Holland. We have published over 65 magazines in Dutch. Besides the Dutch issues we have also published 3 English magazines with 'the best of' articles. In collaboration with ANG Software we have also published 7 Mega Magazines, the European disk-magazine with a twist.

Now, almost 10 years later, we have created a website to publish all magazines on the net. You can download every magazine as ATR file or read the magazines online.

At this moment all English magazines are online, we are now very busy to publish all 67 DUtch language magazines.

If you want to know how the Dutch (and European) scene looked like those days, please take a look at www.pokey.nl or www.stichtingpokey.com.

Hope you'll like it!

Regards,
Fred

I checked the bug with MyIDE-3.2F, I find the same problem. Strange is,
that if you try to copy files from Dx: to Dy: a couple of times, the
bug comes at exactly the same point or file each time.....
But then if you copy file by file, there is no problem.

I also did option 'J' in MyDOS (duplicate disk) from partition Dx: to
Dy: That goes without problem!

Again: It's a strange bug. I will have a look at it.

Howdy folks

I managed to connect my Imac to the internet via a router modem. I wanna do the same with an old Pentium (probably Pentium one, because it's 200 MHz) that runs Windows 95. It has a browser and email utility, so it was able to surf the net and exchange mail back when it was used as an office computer. But I keep hearing I can not connect it to the internet easily. On the other hand, it was used in a big office (my Dad worked for the city) and there is no way that they connected all them computers to the internet via a modem.

Could you please help me folks?
My Dad doesn't want to buy a new computer or to get used a new version of Windows.

slightly off topic i suppose.

It wouldn't be difficult to get the PC onto the internet.
Either modem and dial-up internet access or network card and dls/cable
internet access.
You'd have to have the windows 95 CD.
And I suppose you'd download the latest internet explorer version that'd run
given the specs of the win95 machine.

But the real config depends on which route you go - - - dial-up or
cable/dsl.

Let me know.

He is going through a router, one internet connection to the router and
everything else connects to the router. What you need to connect with Win95
is the WIN-NT extensions available from Microsoft.com. Go to
www.microsoft.com
and download the latest NT extensions, install them and configure the NIC
card
to TCP/IP and Netbeui. That should get you connected.

that's pretty much it! similar to win98 and really not *too* different from
2000/xp (depending on how many drinks you've had).

it's all about tcp/ip. tcp/ip and ball-bearings.

why you'd keep NetBeui is beyond me. In fact, I just had to take a pill to
relax when I read that.
NetBeui a horrible beast that microsoft unleashed, and has subsequently made
obsolete.
but hey, this is the forum for obsolete isn't it? Let's get back to talking
atari, the 80s, and how much I hated the millipede track ball.

2100. Express Pro! and UDS-10

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-21 15:22:55 UTC
From: Docrotcod <rahbart@cox.net>
Message-ID: <kzP9e.26565$gs4.7129@okepread05>
Source record: 11357

Well i've just about finished restoring my original BBS from the 80's with intact messages, userlog, etc. I have the Express Pro! 70A build and have it up and running. I have configured my UDS-10 per Steve Carden's specs. I can initiate a connection to the UDS-10 but just get a blank screen. Doesn't seem like the Atari sees the connection. Does anyone (Marius) have any ideas of what to look for? I haven't upgraded ALL of the .cmd files yet except for the waitcall cmds. I plan on doing that tonight.

Thomas

Hi Thomas. I can't help you with your problem (sorry) but could you send
me or post Steve Cardens's specs for the UDS10? I'd love to see those.
Thanks!

> of Windows.

Do you / does he need Windows, specifically? (i.e., for some application
that ONLY runs on Windows?) Or simply to get on the web and do email
and other tasks?

If the latter, might I evangelize Linux? :^) I've heard great things
about Ubuntu (though I'd personally go for the Kubuntu flavor, as I
much prefer the KDE desktop over the GNOME desktop).

Personally, I use Debian. I use it on my desktop at home. My wife uses
it on her laptop (she does lots of web stuff, and does writing and graphics
as a hobby). I installed Debian on a Pentium (maybe P2?) that I bought
for $50USD to give to my dad. He uses it for his light Internet tasks
with not one problem, and he had only ever used an old Mac running OS 7 & 8
prior to that. (He's only been using modern computers for a few years!)

Of course, being a Unix-like OS that was given birth to on the Internet,
Linux is ready to be put on your network. Even a Pentium running as
a basic desktop system can easily handle your household networking needs
(print server, file server, email server, web server).

If you can boot the system off of a CDROM, and then get it onto your
network and then from there the Internet (especially if it's broadband),
you can just download a small CD disc image, boot it up for the base
install, and grab all of the packages you want over the Internet.

And with Debian (and distros based on it, such as Ubuntu), installing
new apps and keeping existing apps upgraded and secure is quite easy.

apt-get install aptitude (it's better than apt-get, which most folks use)
aptitude update (download latest list of available apps & upgrades)
aptitude upgrade (upgrade currently-installed apps to the latest)

There are GUI interfaces for this stuff, too. My wife and I prefer the
command-line for stuff like this, usually, though. My dad has a dialup
and his computer seriously needs an upgrade. I plan on hijacking it some
day soon, bringing it home where I have DSL (broadband), upgrading everything,
and then dropping it back off at his house. :^)

Links: http://www.debian.org/
http://www.kubuntu.org.uk/
http://www.ubuntulinux.org/

Enjoy!

PS - For test-driving Linux without installing it, there are Live CDs! :^)
Kubuntu, Ubunut and Debian have them. There's also the ever-popular
Knoppix disc (also based on Debian!) http://www.knoppix.org/

I'm selling my copy of "Crystal Castles" for ATARI 800 XL/XE , it's
one of the hard-to-find XE cartridge games.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=8187149740

This copy is boxed, with instructions and works fine on NTSC and PAL
systems.

I can ship worldwide and accept paypal.

Does anyone have a ROM image of the Atari Microsoft Basic II cartridge, and preferably also a disk image of the extensions diskette? I have some old MS Basic Programs that I would like to get running on Atari800Win on my laptop, which unfortunately doesn't have a slot for Atari 8-bit cartridges, so my real cartridge doesn't help.

Thanks.

Hi JR,

After your success with my primative sector copier and MyIDE I've made a small change. I added 2X SIO reads.

I believe this will work for you because it does not use high speed SIO drivers supplied with various DOSes. Instead the stock Atari SIO driver can be used.

The driver is fooled into using a higher bit rate. I'm using Thomas Morper's technique of changing SIO speed on the fly. This was illustrated by Jiri Birnasek in issue 6 of Mega Magazine (now available online at www.pokey.nl). Of course, I'm using Action!, not assembly language. Works both in Atari800WIN Plus emulator and on my real 800.

The technique does not seem to work with disk writes but 2X SIO would have no meaning with MyIDE anyway. The faster reads do greatly improve my program's performance.

As you know, I can't fully test it myself as I don't own MyIDE but my program works fine with the MyIDE version of SpartaDOS (3.3a.). In fact, as I indicated earlier my program is not DOS specific.

None of the other enhancements that we discussed have been implemented yet. The program is still very crude.

Check your mailbox for this update.

Regards,

Steve Sheppard

2109. Atarisio and Atariserver

I would like to thank Matthias Reichl for his excellent little programs atarisio and atariserver. I used to use APE but was always bothered by its non-free nature, plus it only worked on DOS or Windows, neither of which I like to use. I tried out Atarisio tonight on my 130XE and had fun playing MULE again.

However, I encountered some trouble and I don't know how to proceed. I was able to boot DOS 2.5 and also play MULE earlier in the evening, but now it doesn't boot any disk image. It just makes that noise when it initializes without a disk being present. I have included the output below. I am using a SIO2PC cable I built several years ago using a single chip marked 75189. Any suggestions?

```
activated realtime scheduling

"mr-atari" <sijmen@mr-atari.com>:
>Ok, this is interresting. Can you give me a file-size were it goes
>wrong?

I just did a test of various file sizes. I was copying from one 16MB
partition to another in SpartaDOS 3.3a. D1 to D3.

I was able to transfer a 45,000 byte file fine. 50,000 and higher wouldn't
copy for me. Usually I got an error 135.

The interesting thing is, every file that didn't work had a size of 41759
on the destination disk.

I don't know if that helps or not. :)

Are you sure you actually enabled the disk drive containing the
image within the server? This error code suggests that the
drive doesnï¿½t have a disk in it.

Greetings,
Thomas

Have you checked for the most obvious reasons, a broken lead on your
interface, or maybe another drive interfering with SIO communications?

According to the logs atariserver received the command frame (get
status) and answered it accordingly - but it seems it didn't make
it through to your Atari.

BTW: I had a similar problem some time ago and it really drove me
nuts. Everything worked fine before I started redesigning the
kernel driver. After several hours of coding (and really a lot
of changes to the kernel code) the tests failed. I started debugging
every little piece of my code, without success, just to figure out
(some 2 or 3 hours later) that one of the leads on my SIO2PC cable
was broken...

Beware: Murphy is everywhere and the problem is _never_ where you
expect it to be! :-)

so long,

Hias

Yes, I tried several different ATR images, each with the same result.
After looking at some books and online, I have been able to partially
decipher what is going back and forth between the Atari and its disk
(really, the PC). The four bytes of command frame are intended to get
the status (53) of the first disk (31), with two unused bytes.

The PC is sending back a status (90 ff e0 00). The first byte is a
bunch of flags. 90 means that there is an enhanced density disk in the
"drive" and that it is not write protected. I tried some other images
and got 10 for non-write protected regular density images, and 80 for
write-protected enhanced density images, and 30 for double density non

write-protected images. The lower 5 bits in this byte are well
documented. The second byte is only described as "the status byte in
the disk hardware". Does ff mean that there is a problem?

> write-protected images. The lower 5 bits in this byte are well
> documented.

The write protected enhanced density image should give a status of 98,
but the other things are right. Bit 7 means enhanced density, bit 5
means double density, bit 4 means motor running, bit 3 write protected,
bit 2 write error, bit 1 bad data frame and bit 0 bad command frame
(the lower 3 bits aren't used by atariserver and are always set to 0).
BTW: bit 6 is reserved and always set to 0.

> The second byte is only described as "the status byte in
> the disk hardware". Does ff mean that there is a problem?

No. This byte contains the inverted status register of the FDC.
ff means there were no errors.

BTW: You get the exact same status values (90 FF E0 00) from a
stock 1050. But, the actual values aren't used by the Atari OS at
all. The OS sends out the GetStatus command just to see if there's
a floppy drive connected. If the GetStatus command succeeds, the OS
starts booting (i.e. it reads sector number 1) from the drive.

so long,

Hias

Thanks for the info,

I have BBS Express PRO! Nice software.

I just need to pick up a couple of hard drives and maybe a extra
Adaptec 4000A Controller.

I have 2 of em. One has a bad chip and the other worked the last
time I used it.

Was or is there any hard drive that will work with the MIO without using
sometype of Controller card?

Not sure what you mean by not connected to anything.

My Video port is connected to the main PCB Board.
It is soldered. I know that there was suppose to be
a 80 column adapter for it.

I've often wondered if it could be used for something.

I've had it for about 10 years I guess. I bought it
along with a ton of other 8-bit stuff from a guy named
Steve IIRC. He ran a BBS, I think it was L.A.C.E.
or something like that.

There shouldn't be any interference with other SIO devices, since the
only thing I have connected to the Atari is the SIO2PC cable.

>
> According to the logs atariserver received the command frame (get
> status) and answered it accordingly - but it seems it didn't make
> it through to your Atari.

This makes sense to me. I was worried that an improper sequence was
being sent and/or received on the PC.

As far as the cable goes, it has sometimes been a bit flaky, but usually
if I move it a bit it will work again. But after I played a game of
MULE last night it didn't want to work at all anymore, no matter how I
repositioned it. I got out my multimeter and tested the connections and
all of them are solid going to the chip. Perhaps the chip is bad. I
know very little about electronics so I don't know how I might test it
other than getting a new one. (My particular cable only uses the one
chip but it also has a diode on it.)

Maybe it's time to write a small test program on the Atari to test the
serial communication.

Thanks for the help.

Ah OK. I guess we've found the source of your problems!

> chip but it also has a diode on it.)

Try to re-check all of the connections just to be sure you didn't
bend the cable into a position where it got contact again. Also check
if your interface and the cable/connectors are soldered well.

If this still doesn't help, it could be due to a bad connector or
serial/SIO jack.

Testing the IC itself is not too easy, but here's another quick check
you can do with your multimeter:

Measure the (DC) voltage between the TxD signal coming from your PC and
ground. Usually, a multimeter is far too slow to display the quite
short pulses of the serial interface, but you'll observe that the
voltage is constant when no communication is going on and will change
a little bit whenever data is transmitted. You can use this as a
simple "signal/no signal" check.

Plug in your interface, and start checking voltages beginning on the
PC side: first, directly at the RS232 connector, then on the IC where
the TxD pin is connected to. Then check the pin on the IC which is
connected to the DataIn pin of the SIO connector, and then the
DataIn pin directly on the SIO connector.

If the signal is also present on the SIO connector, you'll have to
open your Atari. First check the signal on the SIO jack (from within
your Atari), if it's still there you'll have to remove the PCB
from the case and check if the SIO jack is soldered well.

so long,

Hias

Okay, I am making progess.

Today, for the very first time, I was able to telnet into BBS Express! ST via my UDS10.

1 time. After I disconnected, I could not log back in. I kept getting the "connection refused by host" error.

Logon to port 9999 (config), save and exit (option 9), and I can logon again. 1 time.

What settings are there that won't let a call come in the 2nd time? What is changed when you save and exit? Note I'm not actually changing any parameters - just saving and exiting, which I assume reboots the device?

So what is not getting reset or flushed after it receives a call?

Thanks everyone.

PS Man, it was awesome for that one call though! To actually see DarkForce living and breathing again. :-)

Hmm. With Charter its usually just a couple of megs. You can break them up
into smaller e-mails maybe?

I sure would appreciate it!

Did you get an actual error message on the size? Or just a bounce?

Thanks Marius! :-)

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

Can someone give a rundown of exactly how to set up Atari800win to run an Atari BBS using telnet. Please include TCP/IP socket information to use for test purposes, any special drivers or setup requirement for Windows 2000, port redirection capability, etc. I have attempted to do so using the following:

Windows 2000 (with service pack 4)
BellSouth DSL lite package.
Atari800win version 3 and version 4 (Beta)
BBS Express! (Keith Ledbetter)
SpartaDos ver. 1.6
Atari XL/XE Rom

Also, is Atari800win continually upgraded by its author(s) or have they discontinued supporting it. Thanks for any help in advance.

2132. DGS Atari 8-bit CD-ROM $7 Special (until 29th April 2005)

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-23 11:35:08 UTC
From: Dean Garraghty <dgs@clara.net>
Message-ID: <1114256109.46298.0@dyke.uk.clara.net>
Source record: 11388

Hello All,

This week (until 29th April 2005) I will be offering the DGS Atari 8-bit CD-ROM (commercial and PD combo) for the special price of $7 (2.50pounds for UK buyers), which is a $3 saving on the usual price. This price includes Airmail shipping to any country (first class post for UK buyers). As mentioned the last time I ran this offer, the original $6 offer price is now impossible because of rising costs which are beyond my control. $7 still represents excellent value for the amount of software you're getting!

If you don't already know, the CD contains most of the DGS commercial Atari 8-bit products and the full DGS PD library (191 double sided disks). The commercial products include the PPP products QUICK programming language, SAM 80-col GUI (no extra hardware required), and games, along with the Digi-Studio digitized music package, all 26 issues of the DGS newsletter, and more. All products are in both DCM and ATR format, and have PDF versions of the manuals. A copy of the video we shot at the 1996 AMS show is also on the CD in MPEG-1 format. Full details with descriptions and screen shots are available on the offer page (shown below).

This offer is for readers of this newsgroup, so to get the special price you will need to go straight to the offer page:

http://www.dgs.clara.net/cdrom-a8.htm

Payment is by PayPal only, and there are payment buttons on the page. If you prefer, you can PayPal the money directly to me if you don't like using direct payment links.

Please be aware that this isn't some sort of trick or con, and I'm not intending to run off with your money! Despite the fact that I've been trading for 17 years, people still don't seem to know who I am. There's plenty of background info on DGS on the main part of the website, and there's also a link to an independent review of the CD.

The full text of the classic book Artist and Computer is now available online at
http://www.AtariArchives.org/artist/

Published in 1976 and edited by Ruth Leavitt, Artist and Computer profiles 35 pioneering computer artists. The book is still used as reference material in art classes around the world. "Leavitt's book, Artist and Computer, was an early example of computer artists building a framework into a new genre," according to Gary Svensson, PhD.

"No computer will ever take the place of an artist," reads the book's back cover. "But many artists are discovering computers as a new means of self-expression. Some use computers as a medium to create finished pieces of art, while others explore new art forms, using the computer as an idea machine."

It is the 31st classic computer book to be made available at www.AtariArchives.org.

Howdy folks

It's my Dad's computer, which he uses as a typewriter with a screen attached to it. I added a CD ROM drive to it a while ago, he plain forgot. That's how much he's interested in computers. But he'ld like to be able to use it for email and internet. So would my mom, she's never been on the net. So it'ld like to keep things as simple as possible.

My modem has an ethernet router built in, so I wanna go ethernet with the Pentium 1, 200MHz, Windows 95 computer. All I need is some way to get the PC to talk via an ethernet cable.

Hope you guys can help.

CU Mathy

I've been trying to get this Lantronix working off of my MIO for awhile now. Been trying regular rs232 cables and then crossover cables. After no luck I hooked up a regular modem and noticed it doesn't work either. Finally take a closer look at the rs232 port on the mio and it pins out differently than a standard rs232 port. Can anyone confirm this? I think I need a special cable.

Congratulations! <grin>

Can I ask you some questions? Does your BBS software send any modem
commands once a caller disconnects? If so, what strings does it send?

Also, on your UDS10, do you have it set to flush after calls are connected
and disconnected?

Reason I'm asking is, I've almost got my UDS10 working with my BBS
software. Almost. I can logon, access the BBS, everything normal, until I
quit the call. After that, I can't log back on, I get a "connection
refused by host" error message.

Telnet into the Lantronix itself, (port 9999), save and exit, without
changing any parameters, and I can login again. For exactly 1 call again.
I have to reset/reboot the UDS10 between each call. Needless to say,
something is not quite right.

Thanks, and glad to hear you've got yours up and running. (its a great
feeling, isn't it?) :-)

From the csa8 faq:
Atari 8-bit PC AT 25 PC AT 9 pin
----
1. DTR 20 4*
2. CRX 8 1*
3. XMT 2 3
4. RCV 3 2*
5. GND 7 5
6. DSR 6 6
7. RTS 4 7
8. CTS 5 8
9. No connect? shield RI
22 RI

Note: * above indicates the difference between an AT 9 pin
and a Atari 8-bit 9 pin cable connector. eg. If you check
continuity from pin 3 of 25 pin end and it goes to pin
4 of nine pin end, you have an Atari serial cable. If pin
3 of 25 pin goes to pin 2 of 9 pin end, you have a PC
serial cable.
(updated 3/1/99)

Modems with a built-in ethernet router usually have also a built-in DHCP
server. So, all you need to do is go to the control panel, then go to
network and add the TCP/IP protocol (you don't need IPX or NetBeui).
First try it with the default TCP/IP setting (all options configured
automatically), if this doesn't work you'll have to consult the docs
of your modem (and most certainly also the information you got from
your internet provider, there you'll find the IP-addresses of the
DNS-servers).

so long,

Hias

I see a few spam post here and there but nothing to worry me too much.
Nothing like bit.listserv.coco- it was finally abandoned due to the hundreds
of filth posts on a daily basis. Eventually it cleaned up, turned out there
was some sort of gateway to it through princeton univ. that the spam was
piping through, once that closed it cleared the trash out of the group.
Could be someone has this group in their outlook address book and a virus or
trojan is spamming it that way. Im not worried about it yet, it's still
tolerable.

Yes I have. I use Mandrake-Linux (er, now Mandriva) here, so I just used tfpt to "put" the firmware update right into the UDS10. Worked like a charm.

It was only after doing this that I was able to (finally) get as far as being able to logon to my BBS.

Just wish I could figure out why I have to reboot the UDS10 between every call. I am leaning towards a modem string from my BBS when a caller disconnects not being right, or something flushing (or not flushing?) on the UDS10 side.

Thats why I asked about your settings.

Thanks! :-)

Okay, now I'm going to sound like a fish out of water <grin>. I'm using an Atari Mega ST, its built-in serial port, with BBS Express! ST Pro, v1.98a.

I know, I know - its the 8bit news group - but I hadn't seen anyone on the ST side doing anything with a UDS10 so...

When in Rome... :-)

Oops, guess I didn't explain that too well. What I need first is the
hardware to connect said PC to said modem.

Sorry.

I've been told the PC is way to old (you'ld need atleast a Pentium 2) to
use the ethernet cards they are commonly selling in the shops. And if I
would be able to find one, windows 95 would be too old to support it.

I have a few combo ISA ethernet cards your welcome to for the cost
of postage, assuming your system is ISA. They are 10mbit ethernet, but
should work with any modern ethernet setup.

Don't believe what people are telling you :-)

Just go out and buy a standard 100MBit NIC with a Realtek 8139 chip.
These are usually the cheap cards which you can get for approx. 5 EUR.
Have a look at the card and check if you can find something like
"RTL8139" or "Realtek 8139" written on the big chip.

Drivers for this card are still available from
http://www.realtek.com.tw/ (or on the disk together with the card).

You could also buy a 3Com or Intel card, but they cost a bit more.

so long,

Hias

On Sat, 23 Apr 2005 at 01:27 -0400, "You" scribbled:
->What's happening to this newsgroup? ... it was virtually free of
->porn spam. Now, the porn spam seems to be taking over the news-
->group. What's going on?

You're right. For years now I've seen almost no spam in news-
groups like this one, because the usual filters have succeeded in
filtering it out. But now there's a spam problem again.

Here's the story: There are now spamsters who are sending their
posts in ways that force them onto the Usenet. This bypasses all
the filters and even bypasses moderators. On another NG I'm on,
the moderators have said there's nothing that can be done about it.
The readers haven't liked that one whit and have been complaining
to no end, but the moderators haven't budged. They say the spammers
have set up fake NGs to which they've posted their sludge. The mods
say that makes the spam invulnerable.

->Damn pornsters!!!

It's not pornsters; it's spamsters. There's a difference.
These are spammers; their sole objective is to flood the world with
their spam. The subject or product means nothing to them; they'll
send out their billions of spam messages about anything. All they
want is for one person out of 100,000 to reply. That's how they
make money.

Unfortunately, it seems there's not much that can be done about
it. The spam itself should be ignored. About the only other thing
that might be done would be for individuals to barrage the Lords of
the Usenet (as I call them) with requests for action. The Lords
hang out on certain NGs in the ".news" heirarchy and operate with
rigid bureaucratic rules as if they were ruling the whole universe
and as if this were still the year 1980. That's not good enough.
We need action taken against the spammers and we need it now!
But don't hold your breath.

From: Brian Green <icenospace@particlesnospamdot.org>
Message-ID: <BE91AF4E.1DD2%icenospace@particlesnospamdot.org>
Source record: 11313

Particles! BBS has been online, more or less, since 1992. We feature:

- USENET and DoveNet
- 10000's of Classic Gaming Files (C64, Apple II, Amiga and many more)
- Active online games, LORD, TW, and much, much more.

The BBS is online 24/7 though down when we have the big thunderstorms come through the area :)

Check us out at:

telnet://particlesbbs.dyndns.org

Or you can visit via Java telnet program on the main website.

Retroputing:

The forums are dedicated towards the discussion of older computers, ie, "retroputing". Though there are many sites dedicated towards conversations and information sharing on the topic of classic gaming consoles, there didn't appear to be much in the way of forums of all old computers - normally sites are dedicated to a single system. I'm hoping to change that and create a bit of a community for all fans of older computers. Hopefully you'll check it out. Thanks for your time!

Brian

Most likely. I recently switched news servers due to a hike in cost of the
one I was previously using (yeah, I'm cheap), and there is a definite hike
in SPAM level with the lower cost subscription. I guess you get what you
pay for. :)

> perhaps selling/licensing his rights.

I'm a registered user, so he could have asked me for a copy. Don't use
it anymore, since my LC-10 (NX1000 on your side of the atlantic)
sometimes has problems feeding to paper. And the inkribbons available
(even from good companies) aren't to great either. You can clearly see
on the paper, where the ribbons ends were stuck together. And my Canon
BJC 4200 skips lines between sheets of paper an dproducesw square dots
instead of round once.

It's ROY btw, not RAY. I checked his old letters. I seem to remember
that Roy had a site, years after he wrote DD3.

Howdy William, follks

William Duke <wduke@cogeco.ca> wrote:

> I was wondering if anybody had tried to cluster (parallel process) with the
> Atari 8-bits?

First of all. if you wanna do it, do it. I can think of a lot of things
that are easier and faster on modern computers, but more fun on an Atari
8 bit computer.

I added 1MB to my XEGS (without loosing software copntrole over
anything, I didn't even lose separate ANTIC and CPU bank access)
I've looked at the contents of a CD
I've looked at the contents of a DVD
I've even booted my XE from a CD, via the BlackBox

(check out my site at http://www.mathyvannisselroy.nl for more
information)

I see a couple of C128 freaks every couple of month or so. They are
using the processor in their disk drives as a co-processor. And we all
know how slooooooooooooow the serial bus on a C64/C128 is. (you have
to remember though, that these Commie drives are as intelligent as our
Happy, Speedy and Super Archiver drives, but have more RAM on board.)

CU Mathy

PS you'll find information about the multilink interface (gamelink II
compatible) on my site too.

2165. UDS10 (DarkForce update)

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-25 20:31:52 UTC
From: "Ronald J. Hall" <dark_lord@charter.net>
Message-ID: <pan.2005.04.25.20.31.51.897992@charter.net>
Source record: 11322

Okay, removing/renaming the "RESET.MDM" file from BBS Express! STs directory has solved my problem of having to reboot the UDS10 between each and every caller. This file sent some modem string commands after each caller disconnets. Guess the UDS10 didn't like BBS Express thinking it was a Supra 19.2 modem, eh? :-)

Next problem. I seemm to be unable to download any files. I tried zmodem and x(crc)modem, but always get a "timeout" error.

Now, I do have flow control set to "none" on the UDS, and "none" on the STs control panel.

Can any of the sysops who are successfully doing file transfers post what they have their settings at? I can go experiment (which is fun and rewarding of and by itself sometimes! <smile>) but I'd rather just try starting from someones' known working setup.

Thanks everyone! :-)

2166. Telnet clients?

Basically there is another post in this forum stating how to setup a BBS. I have verified that it does work with a particular version of Atari800 emu and I've even gotten the system to somewhat talk to the R: handler. So far my problem has been the connect and disconnect setup. Personally I would like to see the entire R: handler gutted and redone to support the "Virtual Modems" on www.telbbs.com written by Jim Brain (it's an excellent piece of code simulating a Hayes modem over TCP. Works great for a Commodore 8-bit, not so well on Atari and I haven't even figured out how KEGS works with it's virtual serial port for the Apple //gs.

In the meanwhile, here is a reply I got back from the current developer of Atari800win. I bet he could use any help he could get.

<cut>
Don Fanning wrote:
> Greetings,

Hi Don,

> Is there a way of making a version where the H: support is actually
D:
> support (ie a virtual harddisk?)

It would require to mix the code for H: device with code for Sio patch. I think it is possible to make. I will add this to my task list for future releases. For now I'm hunting the bugs for the final 4.0 :)

> That would be way killer. Plus some form of AT command set emulation
in
> the R: handler would rock even harder (for those of us trying to make

> BBS's).

I've never used R: device and I don't know what is it for. But looking into the code I can see that it is for communicating through TCP sockets. I think I need some traing with the usage of R: device :)

> Additionally, how about a way to stack cartridges like the SpartaDosX

> cartridge with a BasicXE cartridge or MIO/Blackbox Emulation.

Is there any other cartridge than SpartaDosX with the ability to insert

another cartridge?
Anyway implementation of several cartridges will be very hard. I'm not even think about that.

Just want to pass on that telnet toggles DTR to signify hangup. Modem
init strings are basically useless since telnet uses tcp/ip sockets
for connect and flow control. Your tcp/ip socket should at least send
a RING or CONNECT string for software to know to start the ball
rolling.

2176. Re: telnet disconnects

Ummm.. yeah. It also doesn't translate ATDT strings to IP addresses
nor does it recognize a +++ATH string so the modem/term program can do
little except control DTR to disconnect a user. Sucks if you're using
a program like Carina 2.6 for your bbs which uses the AT command set
for modem control.

Well,
the answer is easy: original versions were Gr.8 using color artifacting
(not possible on PAL machines). but luckily some hackers created gr.15
colour versions of games like DMM, Drol, Hard Hat Mac, PCS, etc. So, if
you wanna have these games in color on a PAL machine, there is only one
choice: go and get a pirate copy of them... -Andreas.

Well,
this sounds great. maybe someone can test this with a) a black Box, b) a MSC-IDE interface and c) a KMK (Draco) IDE interface... any if some day a 16bit version of My-IDe is available maybe then someone could test this there too... greetings, Andreas.

[Quote from Mathy van Nisselroy`s site:]

Ever booted your Atari 8 bit computer from a Compact Disk?

I did!

Let's start at the beginning. As you might know, I was one of the first Atari 8 bit users that hooked up a ZIPdrive to his BlackBox. For some silly reason, the
ZIPdrive started clicking a lot after some years. This usually means the drive is having trouble reading the ZIPdisk. But all of a sudden, the clicking stopped. To my o
so big surprise. Then on the 11th of July of 2004, I decided to use my CD Data Reader utility (since then renamed to CD/DVD Data Reader) to check out the
ZIPdisk. Everything worked OK, but I had to change the SCSI ID that was to be accessed and also the sector size. You know, ISO 9660 CD's and DVD's use
2048 byte sector, everything else (except for some really old stuff) uses 512 byte sectors. I was able to look at all the stuff that's on the ZIPdisk. You can see the
512 byte sectors, with the Atari sector link bytes and "bytes used in this sector" byte in the middle and at the end of each 512 byte sector.

That's when the light bulb
went on.

To the Atari 8 bit computer, the ZIPdrive looks just like a Harddrive.

If you could switch not my CD/DVD Data Reader from 2048 bytes per sector to 512 bytes per sector, but do the same thing for the CD ROM drive, and use a CD
ROM (disk) that has been burned to look like a ZIPdrive/harddrive, it should be possible to read data from that CD via the BlackBox. With NO extra software and
NO extra hardware or hardware modifications. Better yet, if you could put the configuration and partition data on that CD, just like on a normal harddrive, you could
even boot from that CD.

The next day (a sunday) a computerclub I sometimes visite, which has PC and Commodore users, had it's usual monthly meeting. And I knew these C128 users had
been using CD's since years. They convinced me, it could be done.

So now I had the idea. But how do I put it into reality? How do I get the files from the Atari 8 bit onto a CD-image that I can burn onto a CD-R or CD-RW?

That's when I thought, why not use ATR's. They already contain everything a disk/partition needs. All we have to do is strip the first 16 bytes.

Hmm, now who could I ask to write the right software for me, who knows his ATR's like the inside of his PC.......?

Matthias Reichl!

So I contacted him, he was interested from the get go.

Then I had to decode the configuration and partition data. Since I live for this kind of thing, that wasn't to hard, although it did take some time. You can find the result
of this decoding in this file. Matthias reminded me, that the addresses to most of what I found can be found in the BlackBox manual. Once decoding everything was
finished, Matthias could start working on his software. What this software does, is turn ATR-files into a CD image.

If you find another harddrive interface that can handle 16 bit data (and 512 byte sectors), and if somebody is willing and able to decode it's configuration and
partition data, it would be possible to change the software in such a manner, that images can be created to support this interface. Unless I am mistaken, IDE
CD-ROM and DVD-ROM drives can NOT be switched to "512 bytes per sector" mode.

What do you need to use an Atari 8 bit Boot CD?

One Atari 8 bit computer with a parallel bus interface
One BlackBox
One SCSI CD-ROM or DVD-ROM drive. Make sure it has a jumper to switch the drive from "2048 bytes per sector" mode to "512 bytes per sector"
mode. I'm under the impression that CD burners usually do NOT have this jumper. SCSI DVD burners are only available to professionals and are VERY
expansive. Always make sure that the drive you want to use will support the disk you want to use. Older CD drives might not recognise CD-RW's or take
there time to do so. CD-R's never seem to create problems. CD-R's and CD-RW's come in all kinds of "speeds". This can cause problems on PC's. But we

are NOT using PC's to read them, we are using Atari 8 bit computers
to read them. Choose whatever speed you want/can get.

What do you need to create an Atari 8 bit Boot CD?

One PC with a CD or DVD burner. I've been informed that the Apple
Macintosh can emulate the PC. As soon as can confirm this, I'll inform
you via this
page.
Software that can burn ANY CD or DVD image to CD-R, CD-RW or DVD
AtariCD by Matthias Reichl
lot's of ATR's.
and ..... atleast one CD or DVD that can be written to. Speed is
not important!

Each ATR will be turned into one partition. This however does not mean
that you are limited to 96 ATR's or partitions. AtariCD will create as
many partitionlists as
needed, with a maximum of 65535 partitionlists per disk.

So how do we use AtariCD?

First we need a list of all the ATR's that are supposed to go on the
disk. The easiest way to create such a list, is to go to the DOS prompt
(on your PC - Start -
Programs - near the bottom of the list). From there you enter:

DIR /B /D /L /N /O:G /S > textfile.txt

textfile.txt is the name of the text file the filenames are stored in.
You can choose whatever name you like.
> means store in textfile.txt
replace > with >> to append to an existing text file
/S means use not only the files in this directory, but also the files in
the subdirectories in this directory.

With newer versions of Windows (sorry, don't know of Linux has a DOS
prompt), you can enter HELP DIR to get a list of all the options that
are available for the
DIR command.

You can load this list into Notepad (or any simular program) to edit it.
If you want AtariCD to start a new partitionlist anywhere in this list,
add in a line that only has
-- (minus sign, twice) in it, for each new partitionlist you want to
start.

After the list is ready, you can start AtariCD from that same DOS
prompt.

Type ataricd on it's own to see a list of all the options. Or just type:

ataricd [-v] [-l {see below}] [-L {see below}] [name of ATR-file list]
[name of CD/DVD image that will be created] [> log.txt]

Since a CD or DVD can hold a lot of partitions and therefore lots of partitionlists (up to 65535 partitionlists of up to 96 partitions each), a list of all the files and their
locations in the partitionlists, and the locations of the partitionlists can be created by using either -l or -L followed by the filename that is to be used for this list. I
strongly recommend you use this option.
The difference between -l and -L ist that the first includes all the directories and subdirectories (e.g. "C:\Directory\subdir1\test.atr"), where the latter will only show
the file name (in this case "test.atr").

Just to illustrate this:

I created a Compact Disk that contains all the ABBUC magazines (78, most double sided), all the ABBUC special magazins that are not copy protected (34, all
double sided, except for the last one which is four sided), all the ABBUC PD disks that can be turned into ATRs (over 650 "disks", going from single to eightteen
sided) plus 142 ATR's (some, by accident, got in twice, so there should have been less) AMC disks/disksides. Most of these are single or enhanced density, so
you'll need twice as much space on a disk, be it CD, DVD or harddisk.
The CD has 330 MB on it. Using 17 partition lists. It took 29 sheets of paper to print all of
that out.

-v means "show just about everything you do"
Some CD/DVD burner software requires that the name of the image file ends with ".iso", so it might be wise to use this extender.
"log.txt" is the name of the file in which the log data (what happened during the creation of the image) is stored.

Required commands are:

ataricd atrlist.txt image.iso

A small hint:

If the file and/or directory names you are using in the DOS prompt contain spaces, you have to put them in quotation marks ("C:\directory name\file name").

BTW the first Atari 8 bit boot CD was created, by me, on the 27th of september 2004.

What good is an Atari 8 bit boot CD or DVD?

It's like having a huge removable harddisk. That can be copied as easily and as fast as any other CD or DVD. No longer does a game require one to swap disks
forever. Huge amounts of data (graphics, sound, levels, etc.) can be loaded at harddrive speed, but still be carried around like it was on a

floppy. You could have
lots of drivers on one disk. Or have more then one versions (in English, German, Spanish, etc. or versions for the XEP80 and normal ANTIC/GTIA output, etc.) of
your software coexist on one disk. And best of all, these drives have, atleast compared to what we are used to in the Atari 8 bit scene, huge buffers. So after a while
the disk stops spinning and data is loaded from the buffer.

Additional information about the Atari 8 bit boot CD/DVD

The first 256 bytes of (512 byte) sector 1 contains the copyright information.
The second half of that same sector looks like this:

Bytes 0 and 1: Number of partition lists on this disk (low byte, high byte. 65535 is the maximum.)
Bytes 2, 3 and 4: Low, middle and high bytes of the (512 byte) sector at which the list of partition lists begins.

The list of partition lists can be from 1 to 386 (512 byte) sectors in size. It uses consecutive sectors. Each sector contains a maximum of 170 entries, each in
low/middle/high byte format. The first three bytes belong to the first partition list, byte 3, 4 and 5 belong to the second partition list, etc. The last two bytes of each
512 byte sector are unused. Each partition list starts with an empty sector.

[end of quote]

Hi Andreas,

My program is a work in progress, just barely capable for porting ATRs to hard disk partitions on MyIDE. Error detection is not robust enough yet for general use. The program is totally unsuitable for with floppy drives at this time, because sector caching has not been implemented.

I wrote the program specifically for JR256 who is testing it now. It's not ready for general distribution. Sorry.

I'll send you a revised copy shortly but it will still be in the alpha testing stage.

You can PM me at step*hen she*ppard at FIXMEhotmail dot com. (Remove the *'s spaces and "FIXME"). Please use "Sector Copier" as the subject.

Hi,

I wonder, are you detecting disk size somehow or do you just copy as many
sectors as possible or manual entry by the user?

Not that I'm aware of. If there is one, I would be interested on Infos.
There are a couple of disk based forth systems for the Atari 8bit, see
http://www.strotmann.de/twiki/bin/view/APG/LangForth

>
> And if so, anyone got one they dont want anymore...

I can build you one, if you like (8 KB Cart, or AtariMax Flashcart), if
you need one for work, not for collecting an original piece.

Best regards

Luis,
Yes, in fact, if I no one makes me any $ offers for the items, I WILL
give them away. All you have to do is come to my house and pick
them up. Kind of difficult for someone who lives across the country
of course. Also, why should I spend 1/2 hour or so packing and then
addressing the package and then standing in a post office line to mail
the item? I sold the 9 cartridges for 50c each. I charged $3.00 for
the
shipping and handling. The mailing costs were $4.50 so my "profit"
was $3.00 total. WOW - BFD! Do you think it is worth it to spend time
posting these items here (to give some Atari enthuseist a chance to get
something that they might want or need) and then wrapping and going
to the post office before I trash-can them? I want to give people a
shot
at them - but I'm not that big an altruist.
Anyway - cartridges are gone - power supplies still left. They weigh 5
lbs
apiece. Shipping alone would be about $5-$6.

HELP! I've just moved into my NEW location and everything is a Mess! So for the Month of May I'm having a Spring Cleaning! So all May long I'm giving away FREE Atari Catalogs updated for you. Get em while their HOT!

This May, Take 20% off the Top of your Atari order on most Games/Software, Hardware and Books for Classic Atari 8 Bit and Atari ST Computer Lines! Plus most Jaguar & Jaguar Games! Call 24HRS! (503)256-9974! And for NEW FREE Atari Catalogs goto! http://BensCatalogs.Atari.org

http://www.aracnet.com/~atari/shipping.htm Shipping Tricks I can do!
http://www.aracnet.com/~atari/newstuff.htm BRAND NEW ATARI STUFF!
http://www.aracnet.com/~atari/whybuyben.htm Ben's Living References!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

2195. The DarkForce! BBS (beta testing)

Newsgroup: comp.sys.atari.8bit
Date: 2005-04-29 14:05:28 UTC
From: "Ronald J. Hall" <dark_lord@charter.net>
Message-ID: <pan.2005.04.29.14.05.24.657394@charter.net>
Source record: 11252

Okay, I've got Darkforce up and running right now. Tons of things remain
to be done, but I wanted to let you guys access it and report anything
amiss to me.

Obvious things:

Express is reporting the connect rate at 300 baud
Date is showing up as ":5" instead of "05"
CDROM section is not working - you'll probably just get a script error or
a timeout. (don't even have CDs hooked up right now)
Bulletins and announcements are hopelessly out of date
The free prize giveaway has been suspended. :-)

The original user logs are still in place, so if you had visited us before
and remember your username/password, you can log right in.

The initial sequence is:

telnet 24.177.21.241

escape character is "^]"

then an ASCII <return>

After that, the BBS software should kick in (God willing and the creek
don't rise). :-)

I'm working this weekend (36 hours) so I'll just leave it up over the
weekend then pull it back offline on my days off to start updating the
bulletins and announcements.

The board supports ASCII text, VT52, and ANSI. ANSI is actually
automatically detected if you're using it.

All comments and criticisms are welcome. You can leave e-mail/feedback on
the board itself, post here in the newsgroup, or email me personally.

Thanks everyone! :-)

wow!! this was like a time travel!!! nice!! And how slow everything was.
I had the impression I am using once again my old 2400 baud modem (rest
in peace). Also very nice to see the reported highscores from 1989 !!!! :)

how does it work? Do you have multiuser abilities supported by the bbs
software? Or do you have to "redial" in case the bbs is already in use?

\twh!

Well, I'm using the Lantronix UDS10 to "negotiate" between my LAN and the serial port on my Mega ST. It acts, for all intents and purposes, just like a modem (emulation). (I had a lot of help from people on this list to get it up and running)

I wish it was multiuser, but alas, it is not. Single user at a time. If you call when someone else is online, it will just refuse connection.

Thanks for calling! :-)

I believe that would require some sort of minimal TCP/IP stack to perform a ping. After all a ping is a packet shot through the network. You might want to check on the status of Contiki, I dont know the URL just do a search on Atari Contiki.

This auction will end in less than 24 hours :

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=62053&item=8187149740&rd=1&ssPageName=WDVW

This is the rare ATARI XE cartridge game "Crystal Castles", boxed,
with instructions.

It will work on ATARI 800 XL/XE machines, the 130 XE, the 1200 XL and
the XE Gamesystem.It's NTSC, but will work on PAL machines, too.

2203. extremetech atari 130XE laptop

Newsgroup: comp.sys.atari.8bit
Date: 2005-05-01 03:34:15 UTC
From: jdplace@cableone.net
Message-ID: <1114918455.672459.95420@g14g2000cwa.googlegroups.com>

Anyone notice the article on page 93 of ExtremeTech magazine??? I was amazed to see an Atari 130XE on the cover (actually the back cover of the sleeve) of the magazine! They built a "laptop" from an aluminum suitcase, LCD screen and the 130XE using a KMK/JZ, and IDE to compact flash adaptor. This newsgroup is mentioned in the article. The article is by Jamie Lendino and Sascha Segan. Very cool!

2204. Holmes FTP?

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

Tim,
If the Getright file is the correct size you can rename the file with a zip
extender or the ATR extender which ever is correct and see if this fixes the
file. If a zip file sometimes I have been able to test and fix. If this
doesn't work re post with the missing files and let us group members help
out.

I did. Thanks. I only did it two weeks to soon. Apple has release a
new version of Mac OS X, the first 64 bit version. If I had waited it
would have cost me 18 euro's, now I have to pay 111 euro's more. One
euro is about 1.3 USD at the moment, but Apple uses the same numbers in
the USA.

CU Mathy

PS I really like the IMac, but I still have to get used to it. Can't
always find the options yet.

Usually Apple are more tolerant than you might expect regarding
upgrades. If you've just spent money on one of their machines, give them
a call, and they'll probably send you a DVD for postage costs...

I've just bought an 1050 drive to my old 800XL, but without power supply and serial cabe. I'd like to build my own serial cable, but I don't know which pin should be connected to which one. Can anybody help me? (is it a simple pin to pin cable, or there is some crosslink in it) Also I don't know the power requirements of 1050. I read that it is 9V, 5.6A. Am I right? Which pin is the + and which one is the - ?

>

Yeah its pin for pin but finding those end connectors is gonna be a problem.
It would be cheaper to just buy one. The power supply should be 9V AC 30-40
amps.

Thanks. I would like to put standard DB15 connectors to my computer and
peripherials and connect them through that.
You mean 30-40 watts, right ;)

Should not be hard at all to attach it.. Use Ethernet or dial up. it
wont care either way.

Problem you will run into is that as time goes on, you wont be able to
view as many web pages as you can with current browsers. Though email
should work for a long time.

You could always load a unix variant on there too, and stay 'current'
without investing more money in software. FreeBSD would be acceptable
for a 200.. as would other OS's

Just to confirm:
pin1 (clock in) goes to pin1 (clock in)
pin2 (clock out) goes to pin2 (clock out)
pin3 (data in) goes to pin3 (data in)
pin4 (gnd) goes to pin4 (gnd)
pin5 (data out) goes to pin5 (data out)
pin6 (gnd) goes to pin6 (gnd)
pin7 (command) goes to pin7 (command)
pin8 (motor control) goes to pin8 (motor control)
pin9 (proceed) goes to pin9 (proceed)
pin10 (+5V) goes to pin10 (+5V)
pin11 (audio in) goes to pin11 (audio in)
pin12 (+12V) goes to pin12 (+12V)
pin13 (interrupt) goes to pin13 (interrupt)

Right?

Hello,

I have loved atari since i was 6. Now i'm 35 and i don't have room.
i have a Trak disk drive, much better than the atari disk drive, it has
double density, write-protect, built in printer buffer and printer
port, power supply and orignal box. worked great last time i used it
and still powers-up. i can't find my 800 computer to see if it really
works, it should though. also a atari plotter with power pack.
misclaneous disks, games. also a color monitor i used to use with my
atari stuff, miscl. serial cables. i know now that this stuff cost my
dad a boat-load back then, but i'd just like it to go to a good home.
please e-mail me if you're interested and i can send some pictures.
dugan_s@hotmail.com
thanks

Correct on both counts, wattage and pin for pin layout. The cable can not have any cross links as per null modem cables as the Atari SIO cable allows for daisy chaining of several peripherals together. Printers, modems, disk drives, etc. all using the same type 13 pin SIO cables. +12 volt on pin 12 probably doesn't exist or is a non connection for most devices so if you don't see that when testing don't worry about it.

Thanks.
I've already equipped my 1050 with DB15 connectors. Also bought an 9V
AC adapter and my 1050 spins up !!!!
Next is my 800xl and the connection cable. Let you know the result.
Thank you for your help.

this is actually a good question! Here my wish list:

Once I wish to

* watch Bruce Lee while he fights against his green fat buddy
* say the black (not the white!) guy of Spy vs. Spy "Hello!"
* punch Bounty Bob because he walked in all his games extremely "gay"
* give Ms.Pacman a bunch of flowers for her great game
* go with the cool Wolfs in order to kill this nasty porks in Pooyan
* thank the dark side guys of Archon for being such a great team
* sit inside a monster OGRE to kill all human on the playfield

what's your wish list?

\twh!

I agree. When I bought my old LC575, it was just before the release of
System 7.5. Apple sent me System 7.5 for something like $10 CDN.

I'd be willing to bet that Apple will extend the upgrade offer to you so
that you can get Tiger at the low 18 Euro price. Give them a call, as
Simon has suggested.

Oh my goodness...let's see:

Adventuring with Iolo, Dupre, and all the gang from the Ultima series
Go into party! mode with Trillian, Arthur, Zaphod, and Marvin from
Hitchikers...
Meet a Krellan face to face (Star Fleet 1)
Actually walk into (only for a moment!) a room full of zombies from "Realm
Of Impossibility"
Actually sit in a "Star Raider"...

and too many more to think about right now. :-)

I called Apple Netherlands since I live in the Netherlands and I called
Apple Germany cause that's where I bought the IMac. No luck.

And now they are releasing 2 GHz versions with bigger harddrives and
faster (dual layer?) CD/DVD burners that weren't even an option when I
bought mine 6 weeks ago.

CU Mathy

Good news: It works fine. Next is my new 1029 printer.
Btw. Is there any DIY hardware mods to speed up my 1050?

You can probably get a cheap Happy enhancement on eBay. And the US Doubler
DIY text is available on the internet but I forget where... maybe you can
Google it.

It appears to be a web-only subscription magazine, but I found a link to an offer for a free trial issue by going "home" then scrolling to the bottom for "Magazine Subscriptions." And at least for now, the trial issue is the one with the Atari portable article. I have never previously read a web magazine, but I am very impressed with their format and mag-reader software.

Interesting articles, also. So it looks like my Atari "laptop" will be at (least) the second one done.

Hi guys,

About the copying bug between partitions:
I think I need some help......

OK. Until version 2.x this bug did not appear.
This version is RAM-based and used CC00-CFFF for the IDE/SIO-patch.
CF00 is the partition-table and is loaded only once (at boot up).
It's basically sector 0 of the hard drive.
If needed partition-information is looked up here.

Version 3 and higher is also ROM-based and therefore I cannot use much
RAM.
As compromise I load only 1 drive information at $258,$8
Now when you are going to use an other partition the code looks for it
by
loading sector 0 into $400,$48 (drive-size+8partitions). When found it
copies the information to $258,$8 and executes the IDE-code.

Apparently here is the bug somewhere......
I have eliminated that there are errors in reading/converting sector 0.
So I'm asking you if perhaps somebody knows if area $400-$447 is used
by DOS/OS ?!?
If yes: there comes the bug.

Let me know,
Sijmen.

Hi,

> I have eliminated that there are errors in reading/converting sector 0.
> So I'm asking you if perhaps somebody knows if area $400-$447 is used
> by DOS/OS ?!?

IIRC, that area is used by the Os for bootstrapping the DOS, i.e.
sector #1 of a disk drive is read in there and then copied to the
target location found in the boot flags.

So long,
Thomas

Mathy:

Call Apple USA... Don't let them brush you off. You paid good money for
your iMac and you're a new Mac user. Send a nice email to Apple explaining
how you just recently switched to the Macintosh from another platform and
didn't realize that you would have received a deal on Tiger if you had just
delayed your purchase by two weeks. Address the email to the head of
public relations and explain that you will be following the email up with a
phonecall.

You'll get the reduced price on Tiger. I can almost guarantee it. Hell,
if you play your cards right, you may even get Tiger for free.

PS: Don't forget to mention that the iMac that you bought six weeks ago is
now also available in a faster and better configuration. Tell them that
you don't want your first experience as an Apple customer to be one of
feeling ripped off.

As a user I remember it as a very good BBS. I don't think it was as popular as Pro but it has everything you could ask.

It was about that time when I got into newsgroups via local waffle boards. It was obvious all the dialups BBSs were going the way of the dinosaur soon as internet connections got cheap and Carina was one of the casualties.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

Heh. Played that game to death, both on my 800XL and my first 520ST. :-)

I've got the box and manual for the ST version. Along with the peril sensitive sunglasses, a button that says "Don't Panic!", belly-button lint, and a small clear plastic bag containing some microscopic and/or invisible space fleet. (I've never let them out you know). <grin>

Wonderful game, with some really brain-matter stretching puzzles! I love the scene with the babblefish. :-)

Later...

I don't own one but this sounds straight forward to me.

You plug XEP80 into joystick port 1 or into joystick port 2. Both joystick ports are read and written from a single Atari pseudo register, called PORTA (address $D300). Data bits 0-3 map to pins on joystick port 1. Data bits 4-7 map to port 2. (Sorry, offhand I don't remember which bits map to which pins).

For XEP80 the data being read/written serially means that the data is tranmitted one bit at a time over the appropriate lines. If you plug XEP80 into joystick port 1 then the data is written via bit 0 and read via bit 1 (of PORTA, above). If you use joystick port 2 then it is bits 4 and 5, respectively.

Hope this answers your inquiry.

I've got a cousin (no, really!) who was playing this game. He got stuck at the part where you're out of the pub and the darned dog won't stop yapping at your feet. He forgot to bring the sandwich to feed the dog.

He tried many, many things/combinations.

Finally, in sheer desperation, he pulled one from way out of left field (you'd really, really have to know my cousin!) and typed in:

"rape the dog"

I'm curious to see if anyone else ever did this.

The game responded with:

"I suggest you take a cold shower".

There was several of us sitting around - we cracked up and fell over we laughed so hard.

Its memories like that.... <smile.

I asked specifically about the _last sentence_, quoting the earlier ones only to introduce to the context. I guess the sentence in question is about the speed but I don't recognise neither the unit nor any of the regular serial speeds. Is that something particular to the Ataris? And should the unit string read "bps" or something more adequate? In other words does the sentence contain error or am I missing something very obvious to every Atari freak?

The port is not a serial chip like a 6551, it is ~parallel port like are commonly used for printers. It is just banging bits high and low with probably a software timing loop for repeatability. It is fairly common in the Atari world since Xformer emulator on both the ST and IBM used this technique with their printer ports to talk to Atari disk drives. Some of the other equipment that used the Joystick port as a serial port were modems like the MPP and serial printer adapters. The ATR8000 used a Z80 bit banging to communicate with an Atari too. If someone wanted to make a serial device that commemorated their birth year by making it 1950 BAUD they could since you aren't limited to fixed divisors and BAUD rates like in a dedicated chip.

Horizontal video timing (15625 Hz). Seems like the XEP80 driver uses
"STA WSYNC" for delays.

so long,

Hias

I'd like to point out that there is no VIA inside an 8-bit Atari, so
"they" simply had to use PIA instead.

The main disadvantage of the XEP80, however, is that it bothers to use
any form of serial communication at all. It would be much better and
much more useful, if it used the regular parallel bus interface (yea, I
realize that the 400/800 have no parallel bus interface; but as an XE
owner I don't care).

K.

This is how I understood the "they".

For XEP80 (made by Atari Corp.) there's no VIA inside the computer, so
it could not have been used.

For the computer itself (made by Atari Inc.) - did the VIA exist at all
in 1978, when the machine was designed? I guess not. So they used PIA
instead.

Even if the VIA existed, does it make sense to connect a display over a
serial line? No, it does not.

Even if a serial connection did make any sense, does it make sense to
emulate an UART, when you actually have a fast UART chip on-board? It
may, but a parallel connection would be much better.

Does that make it more clear to you?

K.

I believe a suitible one in the 6526 vs. the 6520 that was used. I think that is the chip Bob Puff used to do his 8-bit networking.

What Atari did was go with the 6520 and 4 joystick ports. Even at that it was an odd system design in that joystick buttons were handled by the GTIA chip. To handle serial communication via the SIO buss the created the worlds only combination keyboard decoder, serial communication, sound chip, and timer, AKA POKEY: The kitchen sink of LSI chips. I think they locked into 4 JS ports because the early VCS had 4, but who knows?

The POKEY is one heck of a serial chip. It divides the system clock by 16 then has a programable 16 bit register that divides that down to what you want to use. I think you can go from ~2 BAUD to ~115k BAUD. There is a problem with running SIO devices at the same time as a modem so I think that killed any prospect of using it for the XEP80.

>
> Even if the VIA existed, does it make sense to connect a display over a
> serial line? No, it does not.

Actually most of the early CP/M systems used serial terminals. Matter of fact, when I ran short of clones to give my son's friends I hooked one of them up with just an Heathkit H19 terminal and a 1200 BAUD modem. Taught him how to ATD bbs's and he eventually got himself up to speed with computers and a job in data entry. BTW: VT100 standard *WAS* a VT100 terminal that was used with mainframes before it ever found its way to micros.

For word processing serial does suck, but for telecommunication it is exactly what speed you see reading newsgroups and email.

Snipped the part about making sense. Not much Atari did made sense, even the stuff we take for granted now like spending your evenings playing video games. It was a very silly time.

Still, the Pokey, being an UART, is a much better chip for serial
communications, than a software handler sending data over the PIA or
even VIA. I find this simply odd that they used the worst solution they
could. Replacing PIA with VIA wouldn't make it much better anyway.

> The POKEY is one heck of a serial chip. It divides the system clock by

To 126-127kbps actually, but the closest value to the 115kbps you can
get on Pokey is 110-111 kbps. Speeds above 82 kbps are hardly usable
anyways.

> There is
> a problem with running SIO devices at the same time as a modem so I
> think that killed any prospect of using it for the XEP80.

I see a problem with larger data blocks being downloaded via modem and
saved to serial floppy. SIO indeed cannot do these two things fluently.
But for any non-SIO serial terminal (f.e. a display like XEP80) the
problem is the same: until the data is sent over to the "E:" device, the
modem transfer must wait. So it doesn't make much difference, whether
such a XEP is attached via SIO or not. Except that SIO is faster :>

And PIO is yet faster.

> Actually most of the early CP/M systems used serial terminals.

That's a point. Still, if you're Atari Corp. and you want to release an
80-column extension for your 8-bit, you can make it better, probably.

> Not much Atari did made sense

What especially makes me angry, are concepts like the XEP80. They first
designed a beautiful Parallel Bus Interface, and integrated it into the
operating system in a very clever way - and later they come with
80-column video card attached to joystick ports, just like the PBI never
existed, and neither did Pokey. Incredible.

Glad to see the XEP80 being talked about again... I was just this
afternoon thinking about getting back to work on my XEP80 prototype handler
for Atari800Win. Seems a lot of my projects have stalled as of late. :)

By the way, can anyone suggest a software package out there that uses both
displays simultaneously (or pseudo-simultaneously) with good results?

Yes, the bit-banging technique is well known to me. But even if the
speed was given as 15.7kbps I would still wonder how does one achieve
it. A clock-dependant, cycle-counted busy loop with delay loops and IRQs
turned off??! I don't believe so. That 15.7kbps (if that's the right
unit) just have to come from something, the bit-banging routines can
relate to, I guess...

Bingo! That can be it. I'll have to check how does one use that as
timing reference. Thanks a lot!

Well, even today I use (slower) serial lines to operate the headless
servers from time to time, hence if you think of it as a "super speed"
terminal (9600bps was regarded to be "high speed" in the eighties/early
nineties), it just makes some sense, doesn't it?

[...]
> may, but a parallel connection would be much better.

Right. Especially that the XEP was quite a late product and aimed at the
"XE" line, where this type of connection was available and waiting for a
good use.

What I especially displike about this, is the fact that they actually
had designed an 80-column video card, which was not only connected
over the PBI, but its video memory was just mapped directly to the 6502
address space, yet it still was external! And this device was of course
abandoned in 1984.

Interesting. Has this device experienced any production runs? Or you
just heard about an unrealised product?

I just got a XEP-80 recently with the original disk.
Not used it yet.

No manual, unless I have a copy here (looking for it)

I have the Richmans Word Processor. Doesn't it have
support for the XEP-80?

Does the XEP-80 work on a normal RGB monitor?

I didn't get a cable with it, I've a bunch of different cables here
what cable do I need?

No, it was abandoned at prototype stage, together with the 1090
exnapsion box. Few (two?) incomplete cards exist. There also exists an
image of its - very prototypical - ROM handler, and from that you can
guess how did the device actually work.

You just need a standard RCA cable and a monitor with composite video
input. However, i hear you need a pretty specifically decent monitor to be
able to actually see all the lines it provides. Dunno offhand which ones
work well and which don't. The other connection on the device is for
hooking up a printer.

2290. Postal Lottery: Turn $6 into $60,000 in 90 days, GUARANTEED

Newsgroup: comp.sys.atari.8bit
Date: 2005-05-12 05:27:55 UTC
From: bruce.gibbons@gmail.com
Message-ID: <1115875675.274145.122080@g47g2000cwa.googlegroups.com>
Source record: 11247

Postal Lottery: Turn $6 into $60,000 in 90 days, GUARANTEED

I found this in a news group and decided to try it.

A little while back, I was browsing through newsgroups, just like you are
now and came across a message just like this that said you could make
thousands of dollars within weeks with only an initial investment of
$6.00!!!

So I thought yeah right, this must be a scam!!! But like most of us, I was
curious, so I kept reading. Anyway, it said that you send $1.00 to each of
the 6 names and addresses stated in the message. You then place your own
name and address at the bottom of the list at #6 and post the message in at
least 200 news groups. (There are thousands to choose from). No catch, that
was it.

So after thinking it over, and talking to a few people first. I thought

about trying it. I figured, what have I got to lose except 6 stamps and

$6.00, right? So I invested the measly $6.00!!! Guess what? Within 7 days I
started getting money in the mail!!! I was shocked!!! I figured it would end
soon, but the money just kept coming in!!! In my first week, I had made

about $25.00. By the end of the second week, I had made a total of over

$1,000.00!!! In the third week, I had over $10,000.00 and it is still
growing!!! This is now my fourth week and I have made a total of just over
$42,000.00 and it is still coming in rapidly!!! It's certainly worth $6.00
and 6 stamps!!! I have spent more than that on the lottery!!!

Let me tell you how this works and most importantly, why it works!!!

Also, make sure you print a copy of this message now. So you can get the
information off of it as you need it. I promise you that if you follow the

directions exactly, that you will start making more money than you thought
possible by doing something so easy!!!

Suggestion: Read this entire message carefully!!! (Print it out or download
it.) Follow the simple directions and watch the money come in!!! It's
easy!!! It's legal!!! Your investment is only $6.00 (plus postage).

IMPORTANT: This is not a rip-off!!! It is not illegal!!! ? It is almost

entirely risk free and it really works!!! If all of the following
instructions are adhered to, you will receive extraordinary
dividends!!!

Please note: Follow these directions EXACTLY, and $60,000.00 or more can be
yours in 20 to 90 days!!! This program remains successful because of the
honesty and the integrity of the participants!!! Please continue its success
by carefully adhering to the instructions.

You will now become part of the mail order business. In this business your
product is not solid or tangible, it is a service. You are in the business
of developing mailing lists. Many large corporations are happy to pay big
bucks for quality lists. However, the money made from a mailing list is

secondary to the income which is made from people like you and me asking to
be included on your mailing list!!!

Here are the 4 easy steps to success:-

Step 1:- Get 6 separate pieces of paper and write the following on each

piece of paper.

PLEASE PUT ME ON YOUR MAILING LIST

Now get 6 U.S. dollar bills and place ONE inside each of the 6 pieces of
paper so the bills will not be seen through the envelopes (to prevent mail
theft). Next, place one paper in each of the 6 envelopes and seal them, you
should now have 6 sealed envelopes. Each with a piece of paper stating the
above phrase, your name and address, and a $1.00 bill.

THIS IS ABSOLUTELY LEGAL!!! YOU ARE REQUESTING A LEGITIMATE SERVICE AND YOU
ARE PAYING FOR IT!!!

Like most of us, I was a little skeptical and a little worried about the
legal aspect of it all. So I checked it out with the U.S. Postal Service
and they confirmed that it is indeed legal!!!

Mail the 6 envelopes to the following addresses:-

1 Dave Sohi
11 Cinrickbar Dr
Toronto, Ontario
Canada
M9W 6X4

2.G.Lapensee
P.O.Box 21024
420 Queen St.
Chatham, Ontario
N7M 6H6
Canada

3.J. Sibley
P.O. Box 84
Ramea, NL. Canada
A0N 2J0

4.L. Jason
72 Malhotra Court
Ottawa, On. Canada
K1V 1K2

5.J. T. Rhodes
4108, 385 Patterson Hill S.W.
Calgary, AB. Canada
T3H 2P3

6. Bruce Gibbons
1391 East 8685 South
Sandy, Utah 84093
USA

Step 2:- Now take the #1 name off the list that you see above, move the

other names up (6 becomes 5, 5 becomes 4, etc.) and add your name as number
6 on the list.

Step 3:- Change anything you need to, but try to keep this message as close
to what you see as possible. Now, post your amended message to at least 200

news groups. I think there are close to 24,000 groups!!! All you need
is
200, but remember, the more you post, the more money you make!!! This
is
perfectly legal!! If you have any doubts, refer to Title18 Sec. 1302 &
1341
of the postal lottery laws. Keep a copy of these steps for yourself and

whenever you need money, you can use it again.

Please remember that this program remains successful because of the
honesty
and the integrity of the participants and by their carefully adhering
to the
directions!!!

Look at it this way. If you are of integrity, the program will continue
and
the money that so many others have received will come your way!!!

Note: - You may want to retain every name and address sent to you,
either on
your computer or hard copy and keep the notes people send you. This
verifies
that you are truly providing a service. Also, it might be a good Idea
to
wrap the $1 bills in dark paper to reduce the risk of mail theft.

So, as each post is downloaded and the directions carefully followed,
six
members will be reimbursed for their participation as a list developer
with
one dollar each. Your name will move up the list geometrically so that
when
your name reaches the #1 position, you will be receiving thousands of
dollars in cash!!! What an opportunity for only $6.00!!! ($1.00 for
each of
the first six people listed above).

Send it now, add your own name to the list and your in business!!!

DIRECTIONS FOR HOW TO POST TO A NEWS GROUP!!!

Step 1:- You do not need to re-type this entire message to do your own
posting. Simply put your cursor at the beginning of this message and
drag
your cursor to the bottom of this message and select copy from the edit

menu. This will copy the entire message into the computer memory.

Step 2:- Open a blank note pad file and place your cursor at the top of
the
blank page. From the edit menu select paste. This will paste a copy of

the
message into notepad so that you can add your name to the list.

Step 3:- Save your new notepad file as a txt file. If you want to do
your
posting in a different setting, you'll always have this file to go back
to.

Step 4:- Use Netscape or Internet Explorer and try searching for
various
news groups (on-line forums, message boards, chat sites, discussions,
etc.)

Step 5:- Visit these message boards and post this message as a new
message
by highlighting the text of this message from your notepad and
selecting
paste from the edit menu. Fill in the subject, this will be the header
that
everybody sees as they scroll through the list of postings in a
particular
group. Click the post message button. You've done your first one!

Congratulations!!! All you have to do is jump to different news groups
and
post away, after you get the hang of it, it will take about 30 seconds
for
each news group!

REMEMBER, THE MORE NEWS GROUPS YOU POST IN, THE MORE MONEY YOU WILL
MAKE!!!
(But you have to post a minimum of 200).

That's it!!! You will begin receiving money from around the world
within
days!!! You may eventually want to rent a P.O. Box due to the large
amount
of mail you will receive. If you wish to stay anonymous, you can invent
a
name to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT!!!

Now the why part. Out of 200 postings, say you receive only 5 replies
(a
very low example). So then you made $5.00 with your name at #6 on the
letter. Now, each of the 5 persons who sent you $1.00 make the minimum
200
postings, each with your name at #5 and only 5 persons respond to each
of
the original 5, that is another $25.00 for you. Now those 25 each make
200
MINIMUM posts with your name at #4 and only 5 replies each, you will

bring
in an additional $125.00!!! Now, those 125 persons turn around and post
the
minimum 200 with your name at #3 and only receive 5 replies each, you
will
make an additional $625.00!!! OK, now here is the fun part, each of
those
625 persons post a minimum 200 messages with your name at #2 and they
each
only receive 5 replies, that just made you $3,125.00!!! Those 3,125
persons
will all deliver this message to 200 news groups. If just 5 more reply
you
will receive $15,625.00!!! All with an original investment of only
$6.00!!!
Amazing isn't it!!!! When your name is no longer on the list, you just
take
the latest posting in the news groups and send out another $6.00 to the

names on the list, putting your name at number 6 again.

You must realize that thousands of people all over the world are
joining the
internet and reading these messages every day!!! Just like you are
now!!!
So, can you afford $6.00 and see if it really works? I'm glad I did!!!
People have said, "what if the plan is played out and no one sends you
the
money?" So what!!! What are the chances of that happening, when there
are
tons of new honest users and new honest people who are joining the
internet
and news groups everyday and are willing to give it a try? Estimates
are at
20,000 to 50,000 new users, every day!!!

REMEMBER PLAY HONESTLY AND FAIRLY AND THIS WILL REALLY WORK!!!

-- Comments/Feedback (please post your feedback/experiences here) --

Not bad for 1 hr's work....made me around $5320 in roughly 35 days
Anthony
M - TX

Hello, I rcvd 269 bucks in the post in 2 weeks. Dan Miami - FL

I had to wait around 10 days before I had any results - $13,450 as of
3rd
Jan 2003 to date (14th Feb 2003).Am gonna re-post it again for more
money!!
Del from Alberta - Canada

Only received around £588 in the post the last 2 months since I started the
program but I'd posted to approx. 100 newsgroups.
James P - Manchester, UK

Thanks for the info.

I have a Magnavox Pro. RGB that has the composite input.
So that should work. Hopfully it will display all lines.

Another question, since I haven't found a manual yet,
Can I leave it plugged in all the time, even when playing
games?

Or should it only be connected when using a WordProcessor?

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity. Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished. You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the

Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

[Here it is - the secret smoking gun memo
- discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan

for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

If you have your "regular" monitor hooked up as well, you can leave it
plugged in all the time - plug it into port 2 so that you can have your
game stick plugged in. Note that most games are not going to show through
the device. Unless you're running in a standard text mode or you have a
word processor or other app designed to take advantage of the XEP80, you'll
want to have its driver not loaded and be looking for output via the
standard video output.

> any more questions in here, just to avoid further bashings. Btw, this
> happens
> in most of the groups I lurk/participate in. Seems people don't read, they
> skim.

If you visite a forum or newsgroup you have to take into account that:

- some people don't read or are indeed stupid.
- some people had to learn the language commonly used on a forum or
newsgroup as a second or third or fourth or ... language
- even within a language there are variations. Ask an English guy what
a fanny is, and you will find that Americans use the same word for a
different body part.
- not everybody always understands something that is easy to understand
for other people.
- People can not see your face or hear your voice. So they only see
text. No tone of voice, no facial expression.
- In real live, you see the reaction to what you are saying while you
are saying it. This means you can change your explanation or question
while you are speaking.
- What you think or refer to might be obvious to you, It might not be
to the rest of the world. We only know you (if we do at all) via this
newsgroup.

And they even crippled the XEP80. The NS405 that lives inside can
handle 64 k x 16 bits and with some help even create a color image,
according to the data sheets.

You can find some (but not the data sheets) information about the XEP80
on my special stuff page at http://www.mathyvannisselroy.nl

So I heard a band on a local university radio station which totally grooved with me: TTC, a trip-hop band from France. Their latest album is "Bï¿½tards sensibles" (sensible bastards?), and at least this one include lots of noise that I swear must have come from an Atari 8-bit, a C=64, an MSX, or something.

I have no idea what they're singing, since I don't know French, so the lyrics _might_ be explicit. No idea. :^)

Their website contains samples of the tracks on their latest release (song #2, "Dans le club", was the one I heard on the radio, and is the groovin'est of the 8-bit sounding songs). Sadly, the site is pretty much dependent on Flash, so if you don't have that, you're out of luck. :^(

http://www.batards-sensibles.com/

Enjoy!

> Also, Is a normal RGB monitor like a MAG Pro that I already use on the 8-bit good enough for the 80 column Display or do I need something else. ... <

I'm guessing you mean a Magnavox Pro that also has a composite input (as opposed to MAG Innovision monitors). I had one of these years ago, and it cut off about 1/3 to 1/2 of the top line. On the plus side, it did display the 24th line, which usually is more important. If it doesn't work ok in the composite input, you might take a look at the XEP80 RGB modification as explained in the "Atari Classics" Dec. 1993 issue.

2306. Atarimax MyIDE+Flash Cartridge Now Available

Newsgroup: comp.sys.atari.8bit
Date: 2005-05-14 09:37:14 UTC
From: Steven Tucker <classics@atarimax.com>
Message-ID: <eFjhe.2642$Lu6.1767@newssvr19.news.prodigy.com>
Source record: 11113

I happy to announce that in co-operation with Mr. Atari, the "MyIDE+Flash" IDE Interface Cartridge
is now available.

The "MyIDE+Flash" Cartridge is a professionally produced IDE interface cartridge for all 64k Atari
8-bit computers.

The new MyIDE+Flash interface combines Sijmen "Mr. Atari" Schouten's popular "MyIDE" interface with
an Atarimax 1Mbit reprogrammable flash cartridge.

The cartridges built in 1Mbit flash system allows you to utilize the interface and your hard disk
setup in any 64k XL/XE computer, using the built-in boot OS, without modifications to the existing
hardware or operating system.

Official technical support and boot rom development is provided by Mr. Atari, the creator of the
MyIDE interface.

In addition to the pre-made boot roms, advanced users can use the powerful open source Maxflash
multicart firmware development scripts to create and share their own highly customized boot roms,
containing a mix of officially supported software and their own hard disk utilities, games or other
software.

Pre-ordering begins now, with shipments starting 05/19/2005.

Pre-order pricing is $49.99 per cartridge for the first 100 cartridges. (about 39 Euro currently)

For complete product information and the order form go to:

http://www.atarimax.com/myide/documentation/

Highlights:

Complete MyIDE interface with gold plated IDE connector and disk activity LED.
Built in user reprogrammable flash boot rom.
Complete ready to run, pre-approved Mr. Atari boot roms available.
Open source rom development kit, roll your own boot roms including any programs you like!
Hobbyist oriented design, no surface mounted parts.
Highest quality color labels.
Full MyIDE technical support from Mr. Atari!

I have made a new version with the older 2.x drivers to tackle the partition-copy bug. This version 3.2(F) is currently only available with
the MyIDE + 1Mb flash from steven tucker. It is loaded at bootup from the flashcartridge with optional basic / assembler. This device is the coolest hardware to be on earth!

The softversion that can be booted from disk will be ready soon. Some bugs need to be solved, booting the OS has problems....

The hardversion (ROM) has to wait, since there is not enough room in lower RAM to store the partitontables.

All is 100% compatible with the current IDE-configuration software!

Kind regards,
Sijmen.

Could you break this down a little for me?
The pictures at atarimax.com are tantalizing
but don't show the top of the cart, where
I think there is a 50 pin connector for the
IDE hard drive.
Let me conjecture:
The cart you are talking about contains an
IDE interface, female 50 pin port. (on the top of the cart, not a
pass-thru). You then need
an IDE OS to use it with a IDE hard drive.
You connect the drive to the cart port using
a 50 pin ribbon, and use a separate power
supply.
After all this, there is software to format and
partition the IDE drive?
Russg

Yes, there is a 40-pin IDE connector on the top of the
cartridge.

> You then need
> an IDE OS to use it with a IDE hard drive.

Mr. Atari provides a built in OS in the flash portion of
the cartridge, so no hardware OS mod is required, though you
can still add the MyIDE-E OS rom if you want the OS in ROM.

> You connect the drive to the cart port using
> a 50 pin ribbon, and use a separate power

Yes, Mr. Atari provides utilties to format and partition
the hard disk. Also, the built in flash menu has copies of
Shawn Jeffersons IDE manager utilities, which do that and other
functions as well.

From what I gather its a master piece.

When a movie is made from a classic game such as this.
Does the original Author/ programmer get contacted for
rights to base the movie on the game and use the name?

If not, looks like someone has a nice lawsuit.

2314. 1979 Computer Graphics Primer book online

Newsgroup: comp.sys.atari.8bit
Date: 2005-05-15 16:52:57 UTC
From: Kevin Savetz <savetz-remove@gmail.com>
Message-ID: <savetz-remove-93E62A.09525715052005@news.west.cox.net>
Source record: 11121
Cross-posted to: comp.sys.apple2,comp.sys.atari.8bit,comp.sys.cbm,comp.sys.tandy,alt.folklore.computers,comp.graphics.misc

The full text of the classic book Computer Graphics Primer is now
online at AtariArchives.org:
http://www.AtariArchives.org/cgp/

Published in 1979, the book highlights the state of the art of
computer graphics at that time. From the back cover:

"This book shows you how to create your own video graphics on the new
personal computers being sold across the country. It is oriented
toward the Radio Shack TRS-80, the Commodore PET 2001, and the Apple
II home computers, and it is geared to the user who wants to know
the concepts and techniques for drawing pictures, making graphs and
charts, animating shapes and objects, creating mandalas and dazzlers,
and just about any application of the visual arts that you can
imagine."

The book includes type-in BASIC programs for creating graphics on the
Apple II computer. Also of interest are profiles, with pictures, of
low-cost and high-cost ($5000 to $70,000) graphics computers of the
era.

This is the 33rd book to be made available at AtariArchives.org. The
1984 follow-up book, Computer Animation Primer, is also available at the
site.

Thanks, Steve.
That explains it. Do you or Mr. Atari sell
a regular OS ROM that could be plugged into
a RAMROD board? Or, is the 32-in-1 ROM board
from Atarimax have the MyIDE OS? I'm thinking
of a way to leave the cart port open. But the
cart has utilities as well, but these utilities
could be loaded from .COM files?

2316. Help needed reviving ComputerEyes...

Howdy Folks

Kevin from the USA has contacted me. We has found a PCB that we think might be his ComputerEyes PCB. It fits snuggly into what used to be the original housing.

Could you guys and girls please check out this site http://firewall.geezernet.nu/cmpeyes/ and tell us what parts are missing?

Anybody have the ComputerEyes software? IIRC there was software for ComputerEyes from the company that sold the hardware, but also from another company which might have been Irata.

Has anybody ever been able to contact the owners of the rights to ComputerEyes?

CU Mathy

PS there's also a picture of the inside of a Lantronics interface. If you have an RS232 port build inside your XL or XE, this one should fit inthere too. Then you'ld have an XL/XE with a working RJ-45 port.

Yes, Mr. Atari has single eprom versions of his MyIDE External
OS for 10 euro. Its not required with the new cart (it was
required with the old interface), but will still function and help
in some situations.

http://www.mr-atari.com/hardware-info.htm

> Or, is the 32-in-1 ROM board from Atarimax have the MyIDE OS?

Yes, it is also included as a selection on the 32-in-1 module.

Yes, you can build a menu of your own COM/EXE files to be contained
on the flash menu. :)

This was probably one of my *lesser* favorite Infocom games! The humor was great -- but some of the puzzles were a pain in the ass. :) In the end, all the game is is nothing more than a glorified treasure hunt. You had to collect just about everything in order to win the game at the very end.

My favorite response in the game is probably "This is family entertainment, not a video nasty." I think there was one which the game responded with "You figure it out!" if you tried getting some kind of assist during problem.

2321. An Assembly Lge. Question

Newsgroup: comp.sys.atari.8bit
Date: 2005-05-16 03:01:30 UTC
From: Larry <LLppwhite@aol.com>
Message-ID: <1116212490.187619.271220@g44g2000cwa.googlegroups.com>
Source record: 11128

I have been looking at and comparing features of several "80-column"
screen editors -- the Graphics 8 solution to the 80 column display
issue. What I seem to find is that the better-looking fonts are slower
in their screen display. Is there some logic to that, or merely
coincidence? Certainly none of these fonts are very good-looking, but
the ones with better-filled letters are slower. A Graphics 8 screen
requires about 8K, but is there some assembler trick that would allow
screen data with fewer bits "on" to be manipulated faster?
-Larry

Not for 80 columns. If it is a ~65 column proportional front maybe.

The programing is pretty simple IIRC how I did it. You just have a 4 bit wide character set and shift it if need be. I think I also did an 80 column screen with two character sets so I didn't have to do any shifting. You have to keep your own pointers just like the OS does for cursor position. You just AND the next character's 8 bytes of definition with the existing bytes to make the character appear on screen, indexing by 40 bytes each time so you stack vertically. Not the clearest of explainations but good'nuff.

Some of the 80 column screens are slow because they are a full handler hooked into the OS. The Atari OS is relatively slow because of all the house keeping that goes on what with the ability to backspace destructively, move the cursor around the screen non destructively, keep track of the character under the cursor so it can be inverted/highlighted. Most telecommunication programs and WP use their own handler so they can write directly to screen to beat the OS speed. I seem to recall the Atari poops out at about the equivalent to 800 BAUD if you aren't using any speed up tricks for the screen.

Shawn,

Sijmen can probably answer this better than I can, but as I understand it,
anything that uses the ram under the OS still requires the OS in ROM as an
upgrade.

Umm, the game wasn't exactly where it all started...?!?!

The Hitchhikers Guide was originally a radio series (Fit the first)
Then a vinyl LP release
Then a second radio series (fit the second)
More vinyl
TV series
Game
<big gap>
2 more radio series Fit the third/fourth)
Movie.

The fourth radio series is currently being aired for the first time on
Radio 4, UK which is where it all originated back in 1976/7 ish.

I assume that anything that even plays with portb will fail too, just like
with the flashcart. Oh, and you can't use SpartaDOS v3.3 with a RAM based
MyIDE OS for the reason you stated.

Still, the MyIDE + Flashcart is neat and removes the need to boot off
floppy to get the MyIDE RAM OS installed, with the added benefit of having
MyIDE tools (or any other tools or utilities available immediately!)

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

No, the book came out after the radio series. The first two books were
based on the radio series but the radio progs have some bits not in the
books and vice versa.

The radio series is available on CD in the UK and probably elsewhere.

Well, we've down offline for about 4-5 days because a storm took out
Charters' service in the area.

No e-mail, no newsgroups, no internet, nada... Ugh. Thought I was going to
go into DTs! :-(

Anyways, service has (finally!) been restored.

The DarkForce! BBSs' new IP address is: 24.177.23.74

"www.darkforce.org" has been updated to reflect the new IP address and if
you have trouble, you can always check there for the latest info.

Thanks everyone! :-)

Source record: 11141

Yes,
there is software available to partition the IDE harddisk... it is written in Atari Basic (with some ML code included I think). There are also some usefull utilities for the My-IDE available at Mr. Atari`s homepage...

Your description is right, the cart is not a pass-thru cart. The My-IDE works with its own (patched 800 or XL/XE) OS. This OS can be loaded via software (from disk), but then it requires RAM under the OS, which then will make programs that use that RAM area not work. Alternatively one can use the hardware-OS (an eprom) and piggy-back it on the existing OS and install a switch. With the hardware OS RAM under the OS is free and thus most programs using that area will run fine then...

I guess, the OS is also included on the Flashcart, but it is still the software-OS then. To get a hardware OS, one has to burn and install an eprom into the computer... -Andreas Magenheimer.

Hello there!

I have this original Sinclair ZX Spectrum tape of "Twister" by System 3 (of International Karate fame). Its manual lists the loading instructions for the various systems, and guess what, the Atari is mentioned among them as well.

Does anyone know whether this game was actually released for the Atari? Was it even finished or is it vapourware altogether?

Cheers from Germany,

Frank

2337. FS eBay: Atari 8-bit SCART and RCA(phono) cables

Newsgroup: comp.sys.atari.8bit

Hello All,

I'm selling a batch of Atari 800/XL/XE to SCART or RCA(phono) cables cheap
(2.99pounds each) on eBay:

SCART version:
http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8193121036

RCA version: http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8193119082

Quantities are fairly limited, so go and grab one while they're cheap!
They're available to the UK, Europe, US/Canada, Australia.

Dean Garraghty

Defintely radio first. Trust me on this one. I listened to it when first broadcast as I was an avid Radio 4 fan and they did quite a lot of sci-fi around that time.

I recently posted this to the Atari800-users list, but I did not receive much response... I have added real joystick support (2 sticks max) to the DirectX port of Atari800, and I could use a few people to play around with my personal build before the changes show up officially in the next release. If anyone is willing to test and provide some feedback, you can grab the build from here:

http://www.slor.net/a8/atari800-1.3.6-windx-TEST.zip

My testing was done on XP Pro SP2 with a Gravis Gamepad and Gravis Eliminator AfterShock, and I'd like to make sure all the DirectInput stuff works ok with various OS/hardware combinations. Just remember that this binary is unofficial, so you should not report bugs from it to anyone but me.

Thanks!

Source record: 11151

Hi Guys,

Nice to see a long tread about MyIDE :-)

The current 3.2F build 17052005 OS it more then
only a patched OS. The system is configured to
run on it's own and basically is a upgrade XL/XE
Operating system without relocateble / PBI-drivers.
'F'does not support internal BASIC, but uses banks
from the flashrom as programming language. Basic
(rev_c) and atari assembler are included!

Back to the tread: The OS loaded from frash is a
RAM based OS. Using casinit/casboot/3ed-3fc for
reset-proofness and location C000-FFFF as OS.
So any program that interfere with the locations above
can crash the system directly, upon a soft-reset or
hard reset.

The new Flash-OS loader was not easy to write. But
the result may be there. It runs on a 64k machine
with ANY operating system.

More info later. How about continueing this topic on
the atarimax-myide forum at www.atarimax.com?

Kind regards,
Sijmen.

I recently picked up a nice, unmodified 130XE. Tested it at 1X SIO, and all was well. Tried at 3X, and it worked, but with plenty of "static" in the background of the normal SIO sound.

Sooo... the caps need to be cut on the SIO circuit. But why (electrically) is this necessary? Is there a viable alternative? I've never had any ill-effects from making this minor mod, but I am curious as to technically why it needs to be done.

If you are getting good transfers at 56k, then I would say its
not necessary unless you wanted to go beyond that speed and couldnï¿½t.

The extra capacitance increases the rise and fall times on the
lines. As the signaling speed goes up, the dwell time at any one
voltage decreases, so there is less time to reach the threshold voltage
before another state change might occur.

If there is too much capacitance, the voltage seen by the receiver
might not reflect the desired voltage fast enough, and you end up with the
receiver missing bits at the other end, or not hearing anything at all if the
frequency or capacitance is too high.

Here is a page with some scope pictures that shows how the a square
wave changes as more and more capacitance is added.

Like in DOS you can specify a path for all the directories.

In SpartaX you can do the same.

What I want is to subdivide my directories so DOS is in one directory,
tools are in another all off the main root. But have the commands
accessable anywhere through SD.

I don't have many configs to report on but your driver seems to work
well for the following:

- K6-2 400 Mhz, Win98SE, DirectX 8.1, ATI All-in-Wonder (PCI original
model)

Suncom IFX 4000 (USB, 2 axis, 4 button, throttle)
Gravis Gamepad Pro (Joy emulation only, GRIP mode doesn't seem to
work)

- AMD XP (Tbred @ 2.1 Ghz), SDRAM, Windows98SE, DirectX 9.0 ('B' I
think)
Radeon 8500

Suncom IFX 4000
Thrustmaster Dual Analog Gamepad USB (left mini-joy)
Saitek Cyborg 3D Joystick (PC Gameport)
Atari Joystick via ATAJOY homebrew parallel port interface

(using PPJOY driver)

The combination of Atari800Win plus your joystick driver works much better than Atar800Win Plus 4.0 beta 4 when using analog joysticks.

Very nice job, Slor!

[Off Topic]
The color pallete doesn't match my Atari 800. Is there an easy way to adjust color with Atari800Win?

In Atari800Win Plus I set the Color Shift to 55 which sets the hues very close to those of my 800. Saturation levels are much higher in the emulator but I like this. At least, green is green, blue is blue, and red is red now.

Interesting note on that one - I'm curious what differences you see. I
still have Beta 3 on my machine, and I don't recall any issues with my
analog controls.

> [Off Topic]
> The color pallete doesn't match my Atari 800. Is there an easy way to
> adjust color with Atari800Win?
>

That's a good question, but I'm unfortunately not the one to ask. I have
done very little work with color palettes (a little on Atari++ for NTSC),
and I haven't done too much direct comparison with my actual machine
lately. What I DO know is that the Atari800 color palette was changed for
version 1.3.6, and the net result I see is that many builds show me dark
grey where the screen should be pitch black. A simple method to prevent
that from happening is to start up Atari800 with the "-black 0" option.
I've been trying to contact the palette guy to find out the intentions
compared with the results. Until I am successful in that endeavor, I won't
be touching any code. :)

Thanks for the feedback!

Excellent!

> The combination of Atari800Win plus your joystick driver works much
> better than Atar800Win Plus 4.0 beta 4 when using analog joysticks.

> Very nice job, Slor!

Interesting note on that one - I'm curious what differences you see. I
still have Beta 3 on my machine, and I don't recall any issues with my
analog controls.

I'd stick with Beta 3 if you are a game player. Beta 4 corrupts the
Saved States or gets corrupted by old states.

I do like the new History (H) option in the Monitor. Shows the most
recent 6502 instructions executed.

Regarding analog joysticks and Atari800Win Plus, what I see is
unintended direction changes. For example, if moving to the right I
then center the joystick. Before the stick even reaches center the
direction of player motion switches to the left. This is when stopping
is desired!!! Very annoying in games like Ms. Pacman.

If were to guess (and I do mean "guess") the Atari800win Plus joystick
driver is too sensitive, samples too fast, or something, or doesn't
have a big enough center "dead zone".

I installed ATAJOY to avoid the problem.

I also found gamepad control software to be a reasonable workaround.
Map the D-pad to keystrokes and set Atari800win Plus accordingly. I
can't do that with at least one of my joysticks.

> [Off Topic]
> The color pallete doesn't match my Atari 800. Is there an easy way
to
> adjust color with Atari800Win?

That's a good question, but I'm unfortunately not the one to ask. I
have
done very little work with color palettes (a little on Atari++ for
NTSC),

and I haven't done too much direct comparison with my actual machine lately. What I DO know is that the Atari800 color palette was changed for
version 1.3.6, and the net result I see is that many builds show me dark
grey where the screen should be pitch black. A simple method to prevent
that from happening is to start up Atari800 with the "-black 0" option.

I've been trying to contact the palette guy to find out the intentions compared with the results. Until I am successful in that endeavor, I won't
be touching any code. :)

The color shift always annoyed me but it was difficult to determine how much to adjust the color in the emulator until I discovered a utility called "Colorbar.BAS" from Analog Computing magazine, issue #38.

This program displays various test patterns, including color bars. Though not the intended purpose for the program the simple Red, Blue, Green test pattern makes it easy to "calibrate" the emulator.

Colorbar.BAS was originally intended to assist in adjusting TVs and monitors, and it was very useful for calibrating my AIW video card as well, good enough for Atari gaming at least.

Thanks for the feedback!

You are welcome!

Regards,

Steve Sheppard

I've been trying to contact the palette guy to find out the intentions
compared with the results. Until I am successful in that endeavor, I
won't
be touching any code. :)

Thanks! That indirectly gave me the answer I was looking for.

I ran Atari800.exe with the -help commandline switch and got the answer
I wanted.

The commandline switches needed for color shift are -genpal -colshift
xx (where xx is the amount of pallete shift). 55 is still the number
that seems to work according to Colorbar.BAS. At least on my PC and a
friend's PC, 55 is the right amount of shift.

Thanks again.

Source record: 11161

Does anyone know the Path command on SpartaDOS 3.2? When I punch it in
it says, "No path file." Additionally, does anyone have a digitized
version of the 3.2 (plus toolkit) docs?

Don,

I believe PATH.COM is a 3rd party utility, not officially part of the
disk based versions of SpartaDOS.

You can find documentation regarding PATH.COM at the following link.

http://ftp.atari.art.pl/stuff/collections/atari_forever/Dos/SpartaDos/

You'll find it in the SpartaDOS Utilities disk 1.

In brief, create a text file containing the paths you want searched
then type PATH filename (where filename is the file you just created).

example path file (from documentation)

D1:COM>
D1:TEST>UTIL>
D2:

You can also type PATH ON or PATH OFF to enable/disable the path
search.

I think the toolkit is available from the same site but you'll have to
dig for it.

There are also many SpartaDOS utility disks at the site, plus every
Atari DOS you can imagine.

Wish I could work on emulator code as well. I'd like Atariwin plus to translate CR/LF-->Atari EOL as opposed to just LF-->EOL, auto conversions using the H6:-H9: drives. Unfortunately, I find C language as incomprehensible as I find assembler, more so in fact. I just don't get C at all.

Sorry but I misunderstood what you said. Are you doing a XEP80 emulator add-on, developing software for real hardware, or talking about a making a homebrew XEP80?

The poster with the PATH command utility
is probably best for you. SpDOS 3.x doesn't
have a PATH command like you're looking for, either internal or external.
However, it does do one interesting thing that
you might want. It will try the root directory
if it doesn't find a file in the present working
directory. So you could put all your .COM files in the root directory.
I have a documentation for 3.2d in ASCII, if
you want it. It explains stuff like ?DIR (show
current working directory), TREE (show dir
tree starting with Current Working Directory).
And other stuff I never used.
You can e-mail me if you want, remove MUNGE
from address.

I started an emulation piece for Atari800Win PLus a number of months back.
I got a good deal of the basics working, but I unfortunately haven't had
the time to commit to it in the recent past. One of these days, I hope to
get back to it and clean some things up.

I have a lot of Atari 8 bit stuff:

2 Nice 800s with 48K (one with box)
2 pretty nice 800XLs (one with box)
1 810 Disk Drive
1 Indus GT Disk Drive with case (with manuals, original disks, dust cover intact). The case actually has the dividers in it that came with it to make it a storage box.
1 Atari 850
Various books/manuals
1 Touch Tablet in EXCELLENT shape
1 410 tape drive in the original box
Monitor Cables

I also have a Commodore 1702 monitor in the lot.

I'd rather get about $50 for it from someone local than go to the auctions and deal with shipping, so if you like vintage computer stuff and you are in the area, give me a buzz. I can provide photos.

Source record: 11170

Hi, out there,

I connected my Atari 800XL computer to my recently bought PAL TV set.
The TV set cannot synchronize to the Atari 800XL video signal and
display only irregular colored stripes. The same happens, when I use
the antenna output of the 800XL or whenconnect the TV set to my 130XE
computer. What is wrong? It there something special about the Atari
Video signals?

Christian

Modern TVs usually use a PLL locked to a quartz crystal for tuning.

This is rock steady but only tunes to fixed multiples of a basic frequency,
such as 1/16th MHz.

This is fine for TV stations that use a quartz-accurate signal.

The VHF modulators in 1980's home computers are analogue devices tuned by a
ferrite slug in a coil. These probably won't be exactly on a 1/16th MHz (or
whatever) boundary. So your TV may have problems.

If you peel back the label on top of the modulator, you will find a hole in
the can to access the ferrite slug. Tune your TV as close to the Atari
signal as possible, then tweak the slug with a non inductive tool (plastic)
slightly and see if the picture improves.

Alternatively just make an S-video lead, to bypass the VHF modulator
altogether.

K.

I have the same problem if I connect the 800XL with its DIN Video output
to the SCART jack of the TV set.

With my own 15" Toshiba, I had to go to a menu to tell the TV what mode some
SCART socket was.

I can set it to expect AV (=RGB) or S-video...

One has to set it to the right type, otherwise you will get strange screens.

Thought I'd try again to find a SpartaDos X cartridge for sale.

If you happen to have one for sale then e-mail me your
asking price.

Also, I have a SpartaDos X reference manual.
Was the reference manual included with the SDX cart
when bought new?

I use to have 2 X carts, but sold them years ago.
Now I need one for my ICD MIO, I am setting up
a 8-bit BBS and have SpartaDos 3.2D. But could use
the SDX cartridge for some of the Batch files and etc
I created in the past for use with BBS Express Pro.

I have just about all I need except for the SDX cart.

I do have some Atari 8-bit items and alot of Atari ST-Falcon
items for a possible trade.

I in the USA, but would accept one from overseas.

E-mail me at.....
phantomm@bellsouth.net

if you have one or more for sale/trade.

.

Hi folks,

Maybe someone would be interested in this.

The Party Quiz Game by SUNCOM.

All original, including box.
Everything is in very good clean condition except the
outer box is a bit worn.

Includes all items and original manual, disks, controllers and
interface.

Also includes extra Triva Disks.

The hardware will work on Atari 8-bits and Comodore 64.
The Original Disks are Flippes with the Atari program on one side
and Comodore 64 on the other side.

If interested make me a offer.
Need more info, then just ask.
Located in US.

well... guys...

but by my opinion...it looks a like bit off TV channel frequency...
I can open old TV and try to play with TV tuner and make
adjustment... and also I am going to make a new coax cable...

thanx for a good ideas...
george.

Are you using RF? Try svideo or composite. I use Chroma luma on my
modified Atari SC1435 with a 130XE. It is quite sharp. Been a long time
since I used RF. Doh, just read a bit more of your original post;-). Try
this...

Monitor Jack (all but 400, N. American 600XL, XE Game System, SECAM
systems):

3 1
5 4
2

1. Composite Luminance (Composite Video on 600XL)
2. Ground
3. Audio Output
4. Composite Video
5. Composite Chroma (not on 800XL(most),1200XL; grounded on 600XL)

from here;

http://www.faqs.org/faqs/atari-8-bit/faq/

I'm looking for non-functional black version OSS Super Carts. (not orange!) Can be of any product.

If you have an OSS "paper weight" send me an email and tell me what you have (and how bad it's butchered ;-) and maybe we can work out a deal.
LL*pp*white*a*o*l*com (remove the *s and add the "at" and ".").

The Atari 8-bit RF output is 75 ohms thru the RCA 1/4 inch plug;
an adapter
was needed in the old days for connection to the flat 300 ohm
terminals.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

2390. FS eBay: Atari 8-bit SCART and RCA(phono) cables

Newsgroup: comp.sys.atari.8bit
Date: 2005-05-25 17:54:56 UTC
From: Dean Garraghty <dgs@clara.net>
Message-ID: <1117043691.22635.0@dyke.uk.clara.net>
Source record: 11197

Hello All,

I'm selling a batch of Atari 800/XL/XE to SCART or RCA(phono) cables cheap
(2.99pounds each) on eBay:

SCART version:
http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8194711157

RCA version: http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8194710817

I've been able to reduce the shipping cost down for non-UK buyers since the
first batch on the RCA cables.

Quantities are fairly limited, so go and grab one while they're cheap!
They're available to the UK, Europe, US/Canada, Australia.

Dean Garraghty

2391. Minimum PC Requirements for APE

Newsgroup: comp.sys.atari.8bit
Date: 2005-05-26 07:34:51 UTC
From: Larry <LLppwhite@aol.com>
Message-ID: <1117092891.492324.267190@g49g2000cwa.googlegroups.com>
Source record: 11048

Likely an unusual question in this day of Gighertz PC's and approaching Terabyte storage drives -- but what is the minimum speed for APE for Dos? Will it run on an original 8088 4.77 MHz(IIRC) XT machine or perhaps the "Turbo" 8 MHz? I'm pretty sure that SIO2PC would run very low on the PC "food chain," but I've never tried APE. I remember some questions before about trying to get SIO2PC or APE to run on an Atari Portfolio, but never recall if anyone actually did it. (I'm not trying that.)
Thanks,
Larry

> DOS?

Dunno, but these days it is getting rarer to find a PC with DOS and a serial
port.

You could try a PC104 (beermat sized) embedded PC.

APE is in need of some kind of upgrade for Windows/Linux and a USB port.

Perhaps with small microcontroller to do the low-level bit bashing.

Looking for a schematic/parts list for the Microtek AMB 32.
This is apparently the board for use in the Atari 400/800
computers to upgrade from 16K to 32K in 400 and 16/32K to
48K in the 800. I have 15 of these and would like to build
and offer them for sale in the Atari 8-bit community.

Thanks,

Apple II Forever, Apple II Together

Source record: 11054

After setting it up, it will then go on the net.
So anyone who has a interest in Atari 8-bit would be welcome.

I don"t need a SDX cart to do it. They files are already setup with
Sparta Dos 3.2D.

I would just like to purchase one if anyone has it for sale/trade.

Heck, I don't need the pass thru, so If I can't find a original.
I'll get a Memory Cart and put the SDX Image on it.
Will work just the same.

And cost less.

phantomm@bellsouth.net

That's approx what I had it running on. MSDOS 6.22 on an old IBM PS2.
(Built-in monitor... musta been right after Apple released the first
Macs ;^))

2402. XEP80 and DScaler

Newsgroup: comp.sys.atari.8bit
Date: 2005-05-26 23:54:29 UTC
From: Larry <LLppwhite@aol.com>
Message-ID: <1117151669.137301.129910@f14g2000cwb.googlegroups.com>
Source record: 11059

For those interested in the XEP80 and getting a full 24 lines on the screen... I have tweaked the settings on DScaler and found a setting that significantly improves the readability of the text.

DScaler has a video setting for "Color Inversion." This changes the normal XEP80 white text on a black background to black/gray text on a a white background. The big deal with this (at least on my equipment) is that it gets rid of any "shimmer" of the text and makes inverse video easier to read.

The overall picture quality/legibility is still not quite equal to using a "soft-80" solution such Omniview, ACE80, Easy-80, etc., but the font is sure better looking and when there is a screen full of text, it definitely moves/scrolls faster. (Incidently, since *Omniview* has color options, it is possible to set the background color/brightness/contrast with it to closely mimic a "green-screen" or "amber-screen" monitor as well as black on white, etc.)

I still have a few things to try, but overall, I'm well-satisfied with this approach to making the XEP80 usable.

OK, I tried it on a "Compaq Plus" (4.77MHz 8088 luggable) and it worked
with standard SIO speed. But even so, the data throughput was noticably
slower than it is with the 486 laptops I usually use. Maybe putting the
disk images in a RAM disk on the PC would speed it up... but who has
all that RAM in an 8088 anyways?

How I can read strings from cassette, running a ATARI BASIC program?

```
10 DIM A$(100)
20 GOSUB READ_STRING_FROM_CASSETTE_TO_TEMP
30 A$=TEMP$
40 ? A$
```

and then, how to input new information to cassette?, assuming the cassette drive is human controlled perfectly (rewinds, and push rec/play)...

```
10 DIM A$(100)
20 INPUT A$
30 TEMP$=A$
40 GOSUB WRITE_TEMP_TO_CASSETTE
```

Help please :D

>
> Help please :D
Heh, Heh, I'll try.
5 DIM A$(128)
10 CLOSE #1
20 OPEN #1,8,128,"C:"
22 TRAP 400
30 A$=""
40 READ A$
50 FOR N=1 TO LEN(A$)
60 X=ASC(A$(N,N))
70 PUT #1,X
80 NEXT N
90 GOTO 30
400 TRAP 40000
410 CLOSE #1
420 END
1000 DATA STRING1,STRING2,STRING3,ETC.
The computer should beep twice, I think for a write, then press RECORD &
PLAY at line 20.
Then a read program could be done as well, if I remember the OPEN
#1,8,128,"C:" the
128 makes short IRGs (inter-record gaps). Hmmm.. PUTs are very slow, it
might
not work, then you might make a ML routine to do it. Hmm.. maybe, maybe no.
```

```

To write strings to a file (on a tape or whatever) it is more convenient to use PRINT instead of PUT, and later INPUT instead of GET to read them back.

```
5 DIM A$(100)
10 OPEN #1,4,0,"C:"
15 INPUT #1,A$
20 CLOSE #1
25 ? A$
```

Hi all.

Ive been searchin high and lo for this. The free disk based mac65 does not come with a debugger? I have the mac65.rom that works as a cart in an emu, but I would like to run on a real atari. I would also like a copy of the Assembler\Editor cart on disk, I've had it in the past, cant find it either. My email address is valid if anyone feels like helping out and mailing them to me.

OK, That would make it easier to tell the length
of a string, because a ? #1,A$ would append
a 155/CRLF to the end of the string, thus allowing
an INPUT #1,A$ to bring in any string that ends
in a 155. My program would just make a bunch
of bytes to C:, no way to tell the length.

Sorry if I didn't make that clearer. Yes, I am looking for the version
that was (also) used on the Atari 8 bit computers. It has two
joystickport connectors.

If your version doesn't have the joystickport connectors, could you
please tell me how they look. Maybe we can still find out something
about the parts we are missing.

```

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web address.

No email addresses are listed due to spam consequences.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no
guarantees. Information of this nature constantly ages; therefore, the
information contained in this list is constantly updated. Please use the
latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to
send me updates that correct errors that you find. If you use this
list, please do your part in keeping it useful for everyone!

B & C ComputerVisions (B&C, Bruce & Cathy Carso) 1/05
5917 Stope Way
El Dorado CA 95623-4716
USA
tel: (530) 295-9270 11:00 AM to 4:00 PM Monday to Friday (Pacific Time)
http://www.myatari.com/
Vendor: new/used hardware, commercial/PD/freeware/shareware

Eric Bacher 9/02
France
http://ourworld.compuserve.com/homepages/ebacher/
Developer: DIS6502 1.4 -- Atari 6502 Disassembler for Win 3.1/95

BAKTRA (Michael Kalous) 5/05
Czech Republic
http://www.baktra.wz.cz/

Developer: TURGEN (for DOS PC--Program input: ATARI file located on PC;
Program output: WAVE FILE which contains Turbo 2000 record of input file. WAVE
file could then be recorded to cassette (or CD), readable by Atari hardware.)

Richard Bannister 1/04
See also: Chris Lam
Dublin
Ireland
http://www.bannister.org/
Developer: Rainbow v1.5.0 - port of Rainbow 1.4 (Atari 800 series emulator
for MacOS 9) to Mac OS X, Emulator Enhancer v1.4.1

Lee Barnes 10/04
http://www.mathyvannisselroy.nl/mydos.htm
http://www.mathyvannisselroy.nl/aspi.htm
Developer: MyDOS RAMdisk patches, Black Box ATASPI V0.42 ("Atari (Advanced)
SCSI Programming Interface"), Black Box ATASPI V0.41

Ullrich von Bassewitz 5/04
Germany
http://www.cc65.org/
Developer: cc65 2.10.1 - a complete cross development package for 65(C)02
systems, including a macro assembler, a C compiler, linker, librarian and
several other tools.

Michael Beck 5/03
Germany
http://www.rho-sigma.de/
Developer: Atari 8bit filesystem for Linux 0.1

Matthias Belitz ("msc") 10/04
http://www.birmanns.de/atari/
http://www.mathyvannisselroy.nl/aspi.htm
Developer: msc-IDE Controller (IDE interface for PBI/ECI -- sold out),
IDE software utilities: INSTALL.COM V1.03, SETUP.COM V1.13, FDISK.COM V1.10,
MAP.COM V1.10, HDINST.COM V1.00, LMAP.OBJ V1.03, CDPLAY.COM V1.0,
CDREAD.COM V1.4, IMG2DISK.COM V1.00.
Black Box ATASPI V0.40 ("Atari (Advanced) SCSI Programming Interface"),
ATASPI CDPLAY V0.20 (audio CD player), ATASPI MON V0.12 (SCSI monitor)

Bensley Consulting (Brett Bensley) 1/04
PO Box 301
Westfield IL 62474-0301
USA
tel: (217) 967-5465
Developer: Happy's Programs - Math, U.S. History, Astronauts, Triangles

Best Electronics (Brad Koda) 9/02
672 Commercial St
San Jose CA 95112-1406
USA
Telephone: 408-278-1070 (M-F 1:30pm to 5:00pm PST)

FAX 408-278-1092
http://www.best-electronics-ca.com/
Vendor: new hardware, commercial software
Developer: "XE" Touch, Best Joystick, Best Light Gun.

BeWeSoft (Jiri Bernasek - Bernasek-Werner Software) 8/02
Na Hrebenkach 42
15000 Praha
Czech Republic
Developer: BW-DOS 1.00/1.10/1.30, BW-DOS Update #2, Multi Dash, Multi Race,
Multi Worms (multiplayer-games for multilink/gamelink 2 hardware), Golfer,
H2O, Tetris 3D, Superpacker 1.0, Virus Scanner 1.0, Text Converter,
plus many other game and demo programs...

Adam Bienias 8/02
Poland
http://www.try2emu.cavern.com.pl/sap/
Developer: SAP -- Slight's Atari Player, Codecruncher 2.x and 3.x

I use old Toshiba 486 notebooks with 10-20 meg hard drives. You can get a lot of Atari8 programs on these drives.Look on eBay. They work great and don't take up a lot of space.

If you are using the RF cable, then you need to have the toroid balun at the computer end or both ends. A regular audio cable will usually not provide a good signal. A thicker video cable may.

If you are using the monitor port, then almost anything will work that is NOT bought at a cheapie store like a 99cent store. But then you need a 5 pin din plug.

Source record: 11083

Up to 5.25VDC should be fine... remember, once it travels the cord to the machine (resistance of the cable), it'll have dropped a little. If you're measuring 5.25VDC at the PS, I'd wager you'd see about 5.1VDC at the chips, which is totally fine.

Later,
Rob

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

> Cool! I always wanted to try doing Atari SIO2PC stuff off of my
Sharp Zaurus. Perpahs I should buy one of those Serial cables for it
and try out atarisio/atariserver on it. >:^) <

Hi Bill-

I don't know much about the Zaurus -- does it run MS-Dos or is it a
Linux device?
(Although having read your posts before, I suspect I know... ;-)

Thanks, really works, im trying to save a "string matrix" to cassette,
but print #n,var$ is limited to 255 chars per var$. My array is with
1000 chars, 50 chars per input, so the text in position n starts in
n*50. (Atari basic does not have string arrays??)

by the way, anyone knows how to avoid the double_beep before save
someting to cassette?, like a POKE.
```

Howdy folks

I'm looking for (an image of) Video Meister by Irata. It's software for
the ComputerEyes software. I've googled for it, but can not find it.
Please help.

I looked around, didn't fine Video Meister. I found some type of
editor by Irata, in German, and Computer Eyes Executive versions 1.3
and 2, by Digital Vision. One is on Holmes (Executive) and the other
is at a ftp site.

2438. Connecting devices and receiving impulses to atari

I can switch on and off a remote device using the joyport and diodes, npn and a 12v relay, devices like a cpu fan, or lights, but when I control the output of the joyports, I cant receive info from its, peeking like before.

How I can set some pins to input and others to output?

:D please help me

The following is found in Analog Computing #44 July 1986 pp.41

"POKEing to 54016. A 0 puts all pins to logic 0, a 255 sets them all
to 1, while 85 turns on every other pin.

... POKE 54016,15 (00001111), then the first four pins of port A would
be outputs, and the last four inputs. Joystick 1 would be outs and
stick 2 would be ins. Note the reverse relationship between binary
numbers and joystick pins."

If you have an 800, you can POKE 54017 (Port B) to setup Joysticks 3 &
4.

IIRC, the 800xl still has all 4 sticks, but 3&4 need to have
connectors wired internally. I don't remember exactly where,
but I do remember connecting them a looooooong time ago. Did
it so I could use my Home Alarm System on the 800xl that had
been originally used on an 800.

I am looking for a copy of either the 1025 or the Microline 80 manual.
I have googled for both but to no avail. Okidata has removed the
microline 80 manual from their website so previously posted URLs are of
no help and anytime I have seen the 1025 manual listed on ebay it is
bundled together with various hardware pieces other than the printer.
Help me atari 8bit community, you're my only hope! (too cheesey?)

> connectors wired internally. I don't remember exactly where,
> but I do remember connecting them a looooooong time ago.

They're found on the PIA, the chip should be labelled 6520. However,
not all bits are available. For the XL, bits 0,1 and 7 are used to control the
MMU. For the 130XE, even more bits (IIRC, bits 5 and 6) are used for bank-switching,
so there aren't enough spares to connect a joystick in an 800/400 compatible way.

> Did
> it so I could use my Home Alarm System on the 800xl that had

Depends on which joystick port bits it required, of course.

So long,
Thomas

2443. AtariSIO Question

Hias (or anyone),

I'm not a Linux user. I am interested in AtariSIO but do not wish to
install Linux on my PC because I don't wish to reorganize my
partitions.

Can AtariSIO be run using just Knoppix and FAT32?

Thanks

Steve Sheppard

Yeah, I knew I used some at least of the 3rd and 4th sticks,
but had trouble remembering if it was all or just some of them.

: > Did
: > it so I could use my Home Alarm System on the 800xl that had
: > been originally used on an 800.
:
: Depends on which joystick port bits it required, of course.

True. For my Alarm System, I only needed a few more signals.
It was very primitive and minimal, but it did the job. My son
tried to get back in through a window when he came home too
late one night and forgot about the alarm. Man, was he very
surprised to find that I had it set. :o)

Particles! BBS has been online, more or less, since 1992. We feature:

- USENET and DoveNet
- 10000's of Classic Gaming Files (C64, Apple II, Amiga and many more)
- Active online games, LORD, TW, and much, much more.

The BBS is online 24/7 though down when we have the big thunderstorms come through the area :)

Check us out at:

telnet://particlesbbs.dyndns.org

Or you can visit via Java telnet program on the main website.

Retroputing:

The forums are dedicated towards the discussion of older computers, ie, "retroputing". Though there are many sites dedicated towards conversations and information sharing on the topic of classic gaming consoles, there didn't appear to be much in the way of forums of all old computers - normally sites are dedicated to a single system. I'm hoping to change that and create a bit of a community for all fans of older computers. Hopefully you'll check it out. Thanks for your time!

Brian

I haven't tried that yet but I guess it should work, at least with
the most recent Knoppix versions supporting UnionFS (kind of a
ramdisk on top of the read-only filesystem on CDROM which allows
you to "modify and/or overwrite" files).

FAT32 is no problem.

BTW: If you are interested I can email you an 1.44MB floppy image
with a selfmade mini Linux and the current AtariSIO version. Then,
all you need to do is boot the disk, mount your Windows partition
(mount -t vfat /dev/hda1 /mnt), connect your SIO2PC cable to the
first serial port and start "atariserver".

I haven't tested my mini-Linux on too many PCs yet (that's also the
reason I didn't release it officially) and it is quite possible that
some important (IDE-) drivers are missing and that it won't detect
all IDE controllers.

Just drop me a line if you'd like to test it (my Reply-To: address
is valid).

so long,

Hias

Thanks for the update Brian. I'm now keeping a list of telnet Atari BBSs
on my BBS. For the list can you give me some additional info? Like the
following?:

BBS Name - The Particle BBS
Sysop - IceBreaker
Computer -
Software -
Location -
Telnet -
Comments -

Thanks! :-)

Hmm, are the 8bit and ST versions of BBS Express fairly close? I know the 8bit version has been kept better updated.

Anyways, under the ST version on DarkForce!, I always start my ASC and V52 screens with:

&00

then do whatever codes I want to do from there. IIRC, that sets the background screen to black.

I'm not sure about pure ANSI stuff. I use an editor called FANSI that runs on the ST. Written by Eric March in GFA Basic, its awesome. :-)

HTHs.

No way is "Atari" developing a new games console. You saw how much
money it took for MS to create the Xbox? When did Atari get their hands
on that sort of cash?

Atari got split up years ago, I think Atari games are still going, at least when I worked on arcade machines they were still getting new machines out on the market. Its the same old story, they are just "using the name" they have no intention in Atari machines, Why would any company build a 68000 based machine these days ? it would be 10 years out of date. If they did it would be a PC based machine, doubt anyone would invest in a new OS for it, so it would never be a True Atari.

They may develop games with the Atari title, but thats as far as it will go. Though is it "*Really* Atari ? I think not, I have Unreal 2003 with Atari stamped on the box, it aint going run on a Atari machine, so whats the use in it ?! I'm affraid to say that anything with Atari stamped on it is meaningless. I've not worked on the arcade machines for a couple of years now, though the last ones I saw were Jaguar based using the 68000 series CPU. I very much doubt any company would invest in updating that kind of games machine, they would just make it PC based. Big companys don't care about us ppl who are hardcore Atari lovers, all they want is to use the Atari label and thats it. Somewhat easier than trying to make a new brand label known.

Atari corporation owns Atari. They were Infogrames, but took Atari
as the corporate name, mostly sell software for Xbox, PS2, PC. Also
sell a retro machine with built in retro games. Atari went from
the Tramiels to JTS, to Hasbro, to Infogrames/Atari. No, I don't think
they have a lot of capital, and I don't think they are doing a new consol.
I don't think Atari is interested in the old Atari hardware, or maybe don't
even own the patents and copyrights of the old hardware.

Atari Announces Departure of Chief Executive Officer
Tuesday June 7, 4:21 pm ET

NEW YORK, June 7 /PRNewswire-FirstCall/ -- Atari, Inc. (Nasdaq: ATAR - News), a leader in interactive entertainment, today announced that James Caparro has resigned his position as Atari's President and CEO, effective immediately. The board of directors appointed current Chairman and Chief Creative Officer, Bruno Bonnell, to act as CEO on an interim basis. The board has instituted an immediate search for a permanent President and CEO.
ADVERTISEMENT

As announced by Glenayre Technologies, Inc. in an SEC filing on June 3, 2005, Mr. Caparro entered into an agreement to become the President and Chief Executive Officer of Entertainment Distribution Corp., a division of Glenayre.

Bruno Bonnell stated, "Atari has assembled a senior management team that is moving forward to execute its strategic objectives. The team -- from product development to marketing and sales to finance -- possesses enormous energy and experience to lead us as we evolve into a more dominant force in the entertainment industry."

2470. Atari Colour JPEG Viewer Released

Newsgroup: comp.sys.atari.8bit
Date: 2005-06-07 21:57:10 UTC
From: rjespino@hotmail.com
Message-ID: <1118181430.079175.258310@g49g2000cwa.googlegroups.com>
Source record: 10977

Hi all,
After a long wait, a colour JPEG image viewer has arrived on the Atari
8-bit. Version 0.1 of CpegView is now available:
http://rjespino.tripod.com/8bit/colrjpeg/colrjpeg.html
http://www.angelfire.com/80s/rjespino/8bit/colrjpeg/colrjpeg.html

CpegView is the colour JPEG viewer for the Atari 8-bits, based on the
C=64's
Juddpeg decoder (http://www.ffd2.com/fridge/) written by Stephen L.
Judd.

There are 3 display modes available:
* 80x200 in 256 colours: 16 colours x 16 levels of grey (APAC)
* 160x200 in 64 colours: 16 colours x 4 levels of grey (C15)
* 320x200 in 32 colours: 16 colours x 2 levels of grey (C8)

Despite the '0.1' version number, the viewer is pretty stable, please
try it out, let me know how it works for you and what you think.

Comments, suggestions, bug reports, feedback, etc. are welcome.

Next: Adding support for TIP and RIP

Hello Larry... Nice to see that your ATARI is still humming

Re: 14-16mhz cpu upgrade of xl/xe

This one has being doing the rounds for as long as i can remember, the
only 2 upgrades that i heard that actually exist are

65816 cpu upgrade by Bob Wooley... cant remember what he called it
Turbo 8/16 by Chuck Steinmann/Dataque (this was the first u/g to use
this processor)he also did the original stereo pokey u/g called 'gumby'
I remember hearing that FTE/ICD working on something similar
And similarly for CSS (new york)

Trust that this helps

happy Atari'ng

Now i understand, instead of hooking up you atari via a proper tv, you are going thru a tv card on a pc

I did try this a year or so back (just the xe, no xep80) and got so, so results (win tv and dscaler)

I also tried to hook up an old playstation, worked ok as well (always set the channel to 36...if in the UK)

Nah, there's been a more recent one being worked on in Europe, I guess.
There were some AVIs of demoscene demos running at insane speeds recently.

I think that's what he was asking about...?

Sweet16 was the 65816 upgrade from FineTooned Engineering. I don't
remember details about clockspeeds with that one. I'm not a hardware guy. :)

Midway, actually.

I had the opporunity to work at Atari Games in Milpitas back in 1998,
but decided to stay with my soon-to-be-wife. (Ironically, we landed down
in this area (SF south bay / peninsula) a few years later, anyway :^))

There was a slashdot article a coupla years ago when the Midway (Atari)
offices finally closed in Milpitas. I recognized a lot of the stuff
in the photos. (Posters on the wall, etc.)

2478. Video Magazine query

Newsgroup: comp.sys.atari.8bit
Date: 2005-06-08 23:35:42 UTC
From: John Kavanagh <cpcoxygen@gmail.com>
Message-ID: <d87vbp$q9k$1@reader01.news.esat.net>
Source record: 10985

Hi,

I'm currently in the process of making a CD-ROM based interactive tv show. Basically here's the idea:

1. The magazine will come out monthly / bi-monthly or quarterly (depending on interest)
2. Each CD-ROM will contain well over an hour of video footage, along with text and software content. It will all be connected by a sleek interface for easy navigation.
3. The CD-ROM will cover retro news, events, interviews, latest games (for retro computers/consoles) and a lot more. Covering computers and consoles such as the Commodore 64, Sinclair Spectrum, Atari ST, Amiga, MSX and game consoles from Sega, Nintendo and others.
4. It will sell for about 5 USD (thats's about 4 Euro and about 2.70 Sterling) with free postage throughout the world.
5. Depending on the success of the CD-ROM, supporters will be paid for video footage etc, failing that they will be offered free issues of the CD-ROM.

Here is what I want to know..... WHO'S INTERESTED? As in, who would purchase such a CD-ROM, if this interests you or if you want to be involved then email us at john(at)digi-alt.net

Hi Carmel, Bill -

>Nah, there's been a more recent one being worked on in Europe, I guess.
There were some AVIs of demoscene demos running at insane speeds
recently.
I think that's what he was asking about...? <

Yes, I was referring to the 14/16 MHz turbo modification as used in the
demos at
http://pasiu.krap.pl/

The earlier mods were regular Atari (NTSC) clock speed of 1.79 MHz.
But they had the advantage of 16 bit registers, etc. Our users group
had a demo of Turbo 8/16.

Of course, there can be "many a slip between the cup and the lip..."
but I do believe this thing will happen. Gee- it would make a dandy
Xmas present for that "special Atari enthusiast" on my list... ;-)

Here's the history of Atari Games Corp. I put together (and just recently updated), available at http://home.centurytel.net/hunmanik/atariholdings.html

What I just figured out is that, legally anyway, Midway Games West still exists, and is still the owner of all the Atari Games Corp. rights.

Just like Atari Interactive is the legal unit within today's Atari, Inc. that owns all the old Atari Corp. rights.

Anyway:

Atari Coin-Operated Games (Atari Games Corp.)

1985
February 6: Namco, Ltd. (of Japan) purchased the Atari Coin-Operated Games division of Atari Games, Inc. from Warner Communications, Inc. Upon the purchase, Namco renamed the division Atari Games Corp., and made Atari Games Corp. a division of Namco America, Inc. The transaction included the "Atari" name and "Fuji" logo, along with intangible property rights (patents, trademarks, and copyrights) owned by Atari Games, Inc. in conjunction with its coin-operated video game business, all for exclusive use in the area of coin-operated video games. (Upon the sale, the Atari Games, Inc. unit of Warner Communications was renamed Atari Holdings, Inc.)

Spring: Hide Nakajima became president of Atari Games.

1986
(after July 3): A group of Atari Games employees purchased Namco America's controlling interest in the company. Atari Games became independent of any corporate parent. (Both Namco America and Warner Communications remained major investors.) [NOTE- MC has not been able to document this transaction directly.] Hide Nakajima remained president of Atari Games.

1987
September 1: Atari Games purchased all assets of Barrel of Fun, Inc., owner/operator of the "Barrel of Fun" and "2001 Entertainment Center" chains of video game arcades, located primarily in six southeastern U.S. states. The acquired arcade operations would now be run by a new wholly-owned subsidiary of Atari Games, named Atari Operations, Inc.

December: Atari Games created Tengen, Inc., a wholly-owned subsidiary, for the purpose of marketing games for home video game systems (where exclusive use of the Atari brand was owned by Atari Corp.).

1990
June 26: Atari Games announced that it would repurchase the entire 43.8% share of the company held by one of its two largest shareholders, Namco America. In return, Namco received ownership of Atari Games' Atari Operations subsidiary, which operated more than 40 video game arcades in the Western and Southeastern U.S. SEE BELOW.

While there was no majority shareholder in Atari Games before the transaction, the majority shareholder after the transaction became Warner Communications, itself now a unit of Time Warner, Inc.

1992
September: Hide Nakajima was still president of Atari Games.

1993
December 31: The Warner Communications unit of Time Warner reported owning 79% of Atari Games.

1994
April 11: Time Warner Interactive Group, Atari Games and Tengen announced plans to integrate their operations and to utilize the common name, Time Warner Interactive. Use of the Atari Games brand was discontinued, though the Atari Games business unit remained distinct.

December 31: The Warner Communications unit of Time Warner reported owning 100% of Atari Games.

1996
March 29: Midway Interactive, Inc., a subsidiary of Midway Games, Inc. (itself a subsidiary of WMS Industries, Inc.) acquired the entire 100% of Atari Games owned by the Warner Communications unit of Time Warner. Atari Games became a division of Midway Games, and use of the Atari Games brand resumed.

1998
April 6: WMS Industries spun off to shareholders its entire stake of Midway Games, making Midway Games an independent entity. Atari Games remained a division of Midway Games.

1999
Atari Games released San Francisco Rush 2049. This turned out to be the last coin-operated arcade game sporting the Atari Games name and logo.

2000
January: Atari Games was renamed Midway Games West, Inc., and games produced by the group would now sport the Midway Games brand.

2001
June 22: Midway Games announced its exit from the coin-operated arcade video game market; it would now develop software exclusively for home systems. The Midway Games West division remained an in-house game development unit within Midway Games.

October 1: Happ Controls acquired assets of Midway Amusement Games' Midway and Atari Games coin-operated videogame parts and service business, and assumed warranty repair operations and all warranty obligations. See

http://www.happcontrols.com/midway/midway.htm

2003
February 7: The Midway Games West development studio was shut down, but it remained a legal entity wholly-owned by Midway Games.

TODAY: The Atari copyrights/trademarks/patents secured by Atari Games Corp. from Warner Communications in 1985, along with all Atari Games Corp. and Midway Games West properties created since 1985, are owned by the Midway Games West unit of Midway Games. Midway Games, Inc. is based in Chicago, Illinois, USA: http://www.midway.com/

Atari now is just a brand logo used by a games comapny that is themselves very small. There is no way I can see that they are going to build a new hardware, they don't have anything like the money or experience to do it. Besides it wouldn't be wise from a business point of view. I think in the future they will wind up making games mostly for the mobile market where the overheads involved in making games is less, plus they can use their old titles. People won't Q up to play PacMan on the PSP or Xbox 360, but they won't mind paying a few quid to download it to their phone.

oops I forgot to test the gallery link, thanks for that.

The good news is that I've fixed the link.

The bad news is that I've not been able to get any good colour screenshots yet, so the gallery only has greyscale images in it for now. =(

The old interlaced screenshot from the emulator method isn't working, the colours are coming out much too bright. The images themselves look good in the emulator and on the real thing, but the emulator screenshot looks bad. I am using an old emulator (Atari800Win Plus 2.7) though, maybe this has been fixed in newer versions?

I think there may be quite a big market for simple, retro games on the
next gen consoles. All 3 consoles are going to be more on-line
centric, with some games available for download.

If microtransactions can be made to work then the market for simple,
cheap retrogames could be huge - if they can get the cost right there
might be a lot of money to made.

Hello All,

I have another batch of cheap Atari SCART and Atari RCA cables
available for sale at the fixed price of £2.99 (+shipping) on eBay.

The link is below (this may split over two lines, so please copy/paste
the whole link into your browser). People often think this is a fake
eBay link because they don't know that 'ebay.co.uk' exists. That's the
United Kingdom (England) local variant of eBay, but it makes no
difference because I ship to the US/Canada/Europe/Australia/NZ:

Didn't I hear at one point that Infogrammes officially changed their name to Atari? So in that respect, it isn't a subsidy, but the company's official name. It's still only a surface change, though. There is no support for past Atari products at all. Just a means to use past Atari ideas and better name recognition to make PC games.

Hi Carmel-

> I did try this a year or so back (just the xe, no xep80) and got so, so
results (win tv and dscaler)

I also tried to hook up an old playstation, worked ok as well (always
set the channel to 36...if in the UK) <

I am using the least expensive WinTV product -- the "GO" version. Can
be purchased here for $20-30 when on sale (frequently). It does not
have S-video input -- just composite. But that's fine for the XEP-80,
since it is luma only. They do have updated models with S-video. I've
tried several other PC video capture devices, but I've yet to find one
that delivers better results with the XEP-80.

For regular Atari video, the composite input to the WinTV likewise only
looks so-so. So my regular (Chroma + Luma) goes to my ATI
All-in-Wonder card, and it looks *superb*. The ATI will not work with
the XEP-80 -- requires the color burst for sync.

There are a lot of variables to display quality. I recently picked up
a 130XE that has the cleanest display and best saturation of any Atari
I've ever owned -- even several 800's. It is "stock" and in fact had
never been opened (as best I can tell).

-Larry

Who's crying? As I said above, I've got good service from him before, and wouldn't hesitate to buy from him again.

Its hard for me to imagine that very many people in the Atari community (8bit and ST) *don't* know of him as a dealer. I understand that he has to advertise. Its just my opinion, (and others) that he should tone it down just a little bit.

Heck, I've got him listed in the Atari Vendors section of my BBS. :-)

See ya.

The floppy drive most fitting in design for this computer is the Atari XF551 and can usually be found at eBay only, as can the older floppy drives Atari 1050 (matching the XL series in design) and Atari 810 (matching Atari 400/800). The XF551 is a double sided, double density drive, the 1050 a single sided, "enhanced" (127 KB) density drive and the 810 a single sided, single density drive.

The most common of these is the 1050.

HTH,

Thorsten

Source record: 11010

Though probably very rare today, there were also third party drives like Rana 1000, Indus GT, Astra Big "D" (double, density dual drive), and many others. (See Atari 8-bit FAQ below. Search for "What other floppy disk drives can I use with my Atari?")

Many drives and drive systems, Astra, Trak, Percom, Micro Mainframe, SWP ATR8000 (ATR8000 is an interface, drives purchased separately), and more, used industry standard drives of the day including the type used in PC's of the same era. Don't know if this is factor for you but old PC 360K drives (half-height) make perfect replacment drives for such systems.

An alternative to a disk drive is a SIO2PC cable which will allow you to connect your Atari computer to a PC which acts as a virtual disk drive and printer. Disk images are available all over the internet for use with this cable if you use software like SIO2PC (DOS), APE (DOS and Windows versions), Atarisio (Linux). I think there a program for a MAC but I don't know the name.

These were just some examples. There are plenty of people with experience here with all of the above who can offer actual recommendations. I'm not one of them, except I own an ATR8000 and I've tried two SIO2PC cables.

Really??? How do I hook up a PC 360K drive to an Atari? I would love to
do this!

Sorry, I guess I wasn't clear. You need to buy a drive or system that
has the proper controller installed in order to use PC drives. Once
you have such a device, replacement/upgrade drives can be PC drives

The ATR8000 has a 34-pin edge connector. PC floppy drives just plug
in using a ribbon cable. Of course, you need to press an edge
connector onto the ribbon cable as the PC end would normally be a
pin-connector.

The other systems should work similarly but would already have the
necessary cables included.

The Percoms had a special arrangment , drive/slave boxes but I think
the raw drives can be industry drives. The original drives (inside the
Percom boxes) may have been Radio Shack type 35-track drives though.

Just like My Commodore 64 XE cable! I will try to find one immediately.

Do you have any good sources?

I had special needs. The cheap (oops, inexpensive) 1468 1-chip cables
weren't compatible with my ATR8000. Nick Kennedy's 2-chip design works
pretty well. I bought it from

Artur Burzinski (sp?)
http://www.angelfire.com/80s/j131atari/

Found him on Ebay.

He builds a nice cable but it uses the 1-chip design. When I had problems with my ATR8000 he built me a 2-chip design (no extra charge). Shipping was a bit high at, $10 (from Poland) but I won my auction at $10 so overall it was pretty cheap (if I didn't need a special cable, that is. Return shipping cost me $4 plus the cost of packaging).

I hear good things about Steve Tucker's new cable (available from www.atarimax.com) though I don't know much about it so you better ask others here for opinions. (Seach this group or the 8-bit FAQ for information on the differences between SIO2PC, 10502PC, and PRO cables).

If you are good with a soldering iron there are plenty of SIO2PC schematics online. Below is a great site.

Link
http://www.geocities.com/atarimods/

There is also some brand new hardware available for the Atari 8-bit. Latest version of MyIDE (IDE interfaces), USB interface (limited to a few gaming controllers, I think), Flash cartridges (multiple Atari ROM/disk images/binary files), and more.

Thanks again for such detailed information. People like you make it a joy to get into retro computing.

Personally, I get most of my Atari nostalgia kicks from emulators (like Atari800Win PLUS 4.0 beta 4) but I keep my old Atari gear going.

Enjoy your Atari,

Steve Sheppard

Let me second this recommendation. I bought a cable from Artur a while back, and it worked great. The cable got fried, about a year and a half later, when my house got hit my lightning (go figure). I asked Artur about getting another one, and he offered me a replacement a NO CHARGE. I couldn't help but send him some money anyway, but I was very impressed at his offer to send a free cable when the death of my first one had nothing to do with workmanship on his end. That's the kind of guy I like dealing with!

Oops!

The budget 1-chip designs use a 14C89 chip not 1468. (I have no idea why that number popped into my head).

I have serious trouble with numbers (undiagnosed dyslexia?).

I also have trouble with schematics, C language [joking of course], and I fragment sentences sometimes despite proofreading them [not joking].

Steve

Source record: 11016

The Fine Tooned upgrade was a plug-in replacement for the 6502 on your XL/XE motherboard that ran at 1.79Mhz. It came on a small PC board with a memory mutliplexer on the reverse, which in theory would let you add memory beyond the stock 64Kb by multiplexing the data lines on the processor.

They distributed John Harris' MAE 65 assembler along with the boards.

I purchased mine at the TAF Atarifest in 1994 or 1995 and it's still chugging along inside one of my 800xls. I did try some assembly programming, but never got very far with it (managing interrupts is a pain, as you've got to flip back and forth between processor modes)

Source record: 11018

This is not a flame war. I just want to know why the best of the three best computers seems to be the least supported.

There were three advanced, affordable home computers in the united states in the mid 1980's: the Atari XE130, Commodore 128, and Tandy Color Computer 3. From What I've seen, the Atari was the best, but after selling the computer itself, something bad happened to Atari.

Commodore sold a low cost composite monitor with S-Video for a better picture. Tandy's got 83 channels. Atari's got cancelled.

Commodore had 800k 3 1/2" floppy drives. Tandy didn't 3 1/2" floppies because they had hard drives. Atari canceled the XF351.

Need some cheap software to get started? Commodore had Jane. Tandy sold Color DeskMate 3. Atari apparently canceled Infinity.

A third party sold an advanced G.U.I. environment for Commodore. (G.E.O.S.) Someone else had one just like it for Atari.(Diamond G.O.S.) Tandy made their own. (OS-9 with Multi-Vue Environment.) The Commodore and Tandy versions eventualy had a whole series of applications, but Diamond never went anywhere.

What happened? It couldn't have been a lack of customers to sell this stuff to. Atari wasn't as popular as Commodore, but more than Tandy. (just try finding CoCo stuff in thrift shops.)

Was Jack Tramiel afraid to compete against his old company? or were Atari products so good they didn't need a fancy GUI of 3 1/2" drives?

You know a lot more about the subject than I ever did but by 1985 and 1986 very few people I know were giving serious looks at Atari 8-bit. With many models being sold exclusively in department stores/toy stores they were hard to take seriously. The 520ST and 1040STE were where many Atari fans were looking but they weren't satisfied with what they found.

Also, wasn't 1986 when the 8-bit software market went into the dumper. Developers yelling "piracy is ruining us".

I don't recall the color computer 3 being at the same price level but I do think Radio Shack was marketing it poorly. They should have pushed the "affordable" aspect. Nobody but enthusiasts knew what OS/9 was. (Wasn't there an alternate OS, FLEX or something like that, which was the OS of choice for CoCo 3?)

I barely remember any mention of Commodore 128. I could be just blocking it out. I was an Atari fanboy. LOL!

I remember the mid 80's as being a time of fiascos (sp?). There was the IBM PC jr, the Portable PC (or was it called Convertable PC) with it's pop-up floppies. Hugely more expensive but Apple Lisa died before it started. Atari built a fanbase of gamers and enthusiasts and then could not make up it's mind what it wanted to sell to the fanbase.

Maybe the mid 80's was just a bad time for anything but x86 boxes, Macintoshes, Osbornes, and Kaypros.

Sorry, I didn't add anything all that intelligent. I don't have any facts, just vague recollections.

I guess I stand corrected! Perhaps I saw the wrong applications. The 520ST just did nothing for me, except it seemed to one-up the Mac with color and speed at the time. I really did like the RGB monitor.

I don't really know what turned me off about the 520ST. I think I was annoyed that it wasn't backward compatible with the 8-bits but I'm not sure that was it. Too long ago.

This was the time that I lost interest with Atari and Atari computers.

Funny, how things change. I'm enjoying retro computing with my 800, perhaps more now than I did originally.

I do understand. :-)

> This was the time that I lost interest with Atari and Atari computers.

I never really lost interest, but like you, there was a time I became...well, disillusioned is the closest way I can think of to describe my feelings. It was about the time that Atari Corp. closed shop. Also, I was running my BBS and we got 'Net access in our county for the first time. Man, calls dried up like quick! So I shutdown the BBS, sold some of my hardware (but not nearly all) and since I had already been using MINT on my Falcon, I got into Linux (I've always loathed MS/Windows). I guess it was just the timing - all that happening at once. :-(

> Funny, how things change. I'm enjoying retro computing with my 800,
> perhaps more now than I did originally.

Ditto! After discovering the Lantronix UDS10, and its ability to get even non NIC equipped computers on the 'Net, and the fact that after 5 years of being stored in an outbuilding, my Atari ST BBS hardware and software fired up like it was yesterday, well, I was right back in business.

Learning about Rodolphe Czubas' CT60 upgrade for Falcons certainly didn't hurt either - it rocks! :-)

See ya.

I think the main difference is by the time the 130xe came out Atari
was really shifting focus to it's 16bit machines (the ST series), so
you dont see anything on the 8bit from Atari (like a GUI for instance
or 3 1/2" floppy disk support) that could cut into the ST business.
3rd party support was dropping like flies, this was due to rampant
piracy on the 8bit and popularity of 8bit bbs's. Let's face it Atari
users were pirates, prob because we had the cheapest possible computer
so we didnt have the money to buy every single game...

In contrast Commodore stuck with it's more successful 8bit line much
longer (the huge price difference between the c64/128 and original
Amiga made them non-competitors).

I dont see the Color Computer from Radio Shack as beeing all that
successful to be honest. Altho looking back with hindsite it is an
interesting platform, it was pretty mediocre back then. It was not
popular like the Commodore or Atari.

> You know a lot more about the subject than I ever did but by 1985 and
> 1986 very few people I know were giving serious looks at Atari 8-bit.

I find that hard to believe.

> With many models being sold exclusively in department stores/toy stores
> they were hard to take seriously. The 520ST and 1040STE were where
> many Atari fans were looking but they weren't satisfied with what they
> found.

Atari wasted too much time on games. That's probably what ruined them.
I can't believe anyone would take the slow, overpriced 16-bit junk with
all it's bloated software seriously.

> Also, wasn't 1986 when the 8-bit software market went into the dumper.
> Developers yelling "piracy is ruining us".

That didn't kill C= or Tandy.

> I don't recall the color computer 3 being at the same price level

$219.00 from RS, as low as $169.00 elsewhere.

> but I do think Radio Shack was marketing it poorly. They should have
> pushed the "affordable" aspect.

> Nobody but enthusiasts knew what OS/9 was. (Wasn't there an alternate
> OS, FLEX or something like that, which was the OS of choice for CoCo
> 3?)

I don't know if Flex even works on a '3. OS-9 is all anyone ever uses.
The last version came out last year. (It's called NitrOS-9 now.)

> I barely remember any mention of Commodore 128. I could be just
> blocking it out. I was an Atari fanboy. LOL!

You must be. It was the #1 computer of 1985-86. It would have been an
overpriced XE130 with *all* the options (CX85, XEP-80, CP/M) if the
graphics had been better. (Whoever invented character cells should be
reformated)

> I remember the mid 80's as being a time of fiascos (sp?). There was
> the IBM PC jr, the Portable PC (or was it called Convertable PC) with
> it's pop-up floppies. Hugely more expensive but Apple Lisa died before
> it started. Atari built a fanbase of gamers and enthusiasts and then
> could not make up it's mind what it wanted to sell to the fanbase.
>
> Maybe the mid 80's was just a bad time for anything but x86 boxes,

> Macintoshes, Osbornes, and Kaypros.

Why would anyone buy a macintrash, pee sea, amiga, or STink?

> Sorry, I didn't add anything all that intelligent. I don't have any
> facts, just vague recollections.

That's ok, I'm not all that inteligent myself.

By the way, I'm not complaining about the Atari. I prefer the good old fashined menu driven software, like most C=64, CoCo, and almost all Atari programs.

By the way, who sells XE130's, Atari software, peripherals, etc.?

Hi,

I downloaded the asmed.rom, but the break key doesn't respond with beta5 emulator. Also the break key is not read using standard Basic. Is this a new feature or a setting I need to change in the configuration.

RoyE

Hi, Gork! Where have you been hiding?

Fortunately, the 1.3.6 engine command line options still work. Adding
-genpal -colshift xx (where xx is desired color shift, 55 in my case)
to the Atari800Win Plus link/shortcut achieves the colors I desire.

Don't know what's up with the BREAK key which is a bigger problem.

Jack just did not want to spend the money. Too cheap. Target wanted to stock
the Lynx when it first came and put in a HUGH order. Atari hardly sent them
any. Same for the ST and Jaguar.

Having successfully fitted a Granlin Stereo upgrade to an XEGS (no mean feat since it doesn't fit) I was surprised to find Bounty Bob Strikes Back had stopped working.

I checked the memory on self-test and it was all green. Is there anything strange about stereo upgrades that would stop some programs working? Certainly BBSB seems particularly sensitive; a few years ago it failed to run on another Atari of mine after installing Warp OS (the roms of which later transpired to be ntsc intead of pal ones). Anyone got any ideas...?

Bins of the ROM alone won't help. You need the programmable logic array
chip that's on that cart to make it work too. I don't think anyone has been
able to reverse engineer that yet.

Correct, after seeing that it's a 64K PROM, I agree that reproducing
the logic to bank switch it would be next to impossible without the
source code. So, in lieu of that, I took Action, BasicXL, and Mac65
instead. All of which are 16K ROMs.

Theres a SpartaDOS X image already posted for the 1mbit flash
cartridge. It works, but you will be missing the pass-thru connector
thats on a standard ICD cart.

I've considered buying games from this fellow, but I find the spelling and grammar problems in his ads to be a complete turn off. Anyone else feel this way? I guess subliminally I think the service will be bad, or something will go wrong with my order because the spelling and grammar abuse makes him appear incompetent (which probably isn't the case)... It's just not good business to present oneself in such a manner to potential customers.

Not to rush to anyone's defense, but I sent this gentleman an e-mail with some concerns I had about trying to find a certain Atari product on his website. The reply I got was polite, professional, and friendly. I was impressed. If he had the products I was looking for, I would have surely bought them on the merit of his reply to my original concern.

I've bought from him in the past - despite his (apparent) lack of
grammatical skills, the service was fast and solid. :-)

PS BTW, why was this cross-posted to such a large number of newsgroups?

Hi Ronald

That's besides the point, he's spamming a non-commercial base with his
retarded and much repeated wares.

Hey, Don! Off topic, but I was just curious - is the Bear Cavern BBS Atari
based or something else?

I checked out Ben's website and catalogs a couple of nights ago and I found
his website to be most difficult to read. I'm not terribly impressed with
his prices either.

Example:

SX212 1200 baud Modem $25 U.S.
SX212 1200 baud Modem $40 U.S.

At first I thought it was a double entry for the SX212 modem. I couldn't
figure out why one modem cost $15 more than the other when they are both
identical units. Then I figured it out: The $15 premium gets you a manual
and a box.

I have to say that I find Ben's shareware prices to be somewhat outrageous.
Ben wants $10 U.S. for a copy of a shareware program like BobTerm. If Ben
is actually getting people to pay $10 U.S. for a disk with one shareware
program on it, I'm going into the shareware distribution business!

Also, on the question of integrity, Ben had a contest where customers were
invited to submit "customer satisfaction" testimonials. The customer to
write and submit the best testimonial, in Ben's opinion, would receive a
cash prize of $25.

I was shocked to learn that Ben awarded the $25 cash prize to a very close
friend of his. Most reputable businesses exclude friends and family from
eligibility in contests. Not Ben! Ben even goes on to describe how much
of a friend the contest winner is.

Note to Ben Smith: Testimonials carry much more weight if they are written
by people that you don't actually have personal relations with.

Anyway, I don't anticipate that I will ever be ordering from Bravo Sierra
Computers.

> working? Certainly BBSB seems particularly sensitive; a few years ago
> it failed to run on another Atari of mine after installing Warp OS (the
> roms of which later transpired to be ntsc intead of pal ones). Anyone
> got any ideas...?

Maybe, yes. The stereo upgrade usually splits the pokey address space
at d200-d2ff evenly between the two pokeys. Even though the memory map
defines that the 1st and only pokey should be addressed at d200-d20f,
a program would also reach it at any of the following addresses up to
d2ff. With a stereo upgrade, the same read or write would go into the
second instead of the first pokey, and thus the function of a program
that does not use the official addresses is changed. The "inofficial"
chip addresses often have been used for obfuscination, especially in
copy protection schemes.

My recommendation would be to insert a switch that disables the stereo
upgrade. I haven't seen the schematics, but I would believe that
it basically works by using address line A4 and'ed with the Pokey chip
enable (CE) line to address either the first or the second pokey chip.
The switch would then either apply address line A4 or GND to the new
chip select unit to disable the 2nd pokey.

So long,
Thomas

Hello, I'm new to this group, just a quick question please to those of you in the know.

While trying to get back into the Atari 8bit scene (I used to do 6502 programming in the 80s), I bought an 800XL and disk drive on eBay and connected them up. Now the computer works but the drive had smoke coming out of it so I shut it down. Is there some correct order to connect these up/switch them on, because it's been 20 years and I've forgotten.

Thanks
Paul

Hi,

Thought some of you guys might be interested in the following items I'm currently auctioning under the seller id j0nstringer:

1) Official Atari Technical Reference Notes (bound)
2) Atari Assembler Cart and Manual & Master Memory Map book
3) "De Re Atari - A Guide to Effective Programming" (bound)
4) Programming the 6502 by Rodnay Zaks

Also got a couple of C64 and Amstrad CPC development auctions currently running.

Any questions give me an email.

Cheers
John

Hi Paul,

Smoke is not normal no matter how you connect them. Can you tell us
what the voltage/current markings on your 1050 power supply are, written
on the bottom of the brick? If that is the wrong brick it could be causing
your problem.

Other than that I would say you just received a defective drive. You
could try taking the top cover off and trying to see what component the smoke
is coming from, then perhaps we can help you repair it.

Steve

1050 psu has 240v in and 9v ac out as markings on the top, I can check this later with a meter, it seemed ok when I had the computer switched off and the 1050 switched off, then connected the two together, then remembering the PC rules about switching on peripherals first I switched on the 1050 then the computer, which then said "boot failure" or similar because I didn't have a disk in the drive. So at that point the 1050 was still working. Then I switched the 800XL off to start trying combinations of holding down start/options etc as I switched it on to see if I could start it by bypassing the drive then I noticed the smoke.

There is a burned resistor inside. It's not a big deal to replace it, providing I can get the value off the pcb, I was trained as an electronics engineer but that doesn't make me an expert on old Atari's hence the posting.

That and the Z80 version by Leventhal were the books every serious
home-computer user had in the 1980s. I used to see them everywhere, then in
bargain bins, then they disappeared entirely apart from a few copies on
eBay.

I'm surprised that they have not been turned into electronic versions, like
the many more machine-specific books (e.g. at
http://www.atariarchives.org/).

I started turning the Z80 version into HTML, and of the 451 pages I scanned
I have done 77 and have 379 to go! (1/9th total).

If you scanned the 6502 book into 300 dpi PNG files, I'd be interested in
that.
Though don't hold your breath for me to OCR/HTML it! :-)

9V ac out is correct. I guess you're in a 240v country, else the plug
wouldn't fit.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

UK. Given all the years since manufacture is a circuit diagram for the 1050
something I am likely to get hold of?

I do not know where to find a circuit diagram, but if you use a digital
camera
to take a picture of the circuit board with the damaged component, I could
probably look inside one of my 1050 disk drives at the same location and
read
out the colour code of the resistor for you.

Thank you for the kind offer.

In fact it turns out to be an inductor, I should have realised this from the designation which is L6. I did a Google this morning for cct diagrams and found one for the 1050. It gives the value of the inductor so replacing it ought to be easy. Of greater concern is why it burned in the first place. There isn't really much more I can post on this ng until I have done some measuring and soldering but I appreciate your offer.

Paul

2600. Cartridge Expander?

Newsgroup: comp.sys.atari.8bit
Date: 2005-06-21 12:16:43 UTC
From: Larry <LLppwhite@aol.com>

I was wondering if anyone other than ICD ever sold a "cartridge expander" for the XE models? Perhaps in Europe? Of course, the ICD model was actually an adapter with two cartridge jacks between the XE ECI and the MIO which used the 600/800 XL PBI.

I don't recall any others, and yet they are sooo handy. I seem to recall some pre-promotions for one, but I think that it never was actually sold. These were quite popular with other computer systems, some with selector switches to choose the cart(s) that you want to be active (or none, IIRC). You could probably even adapt this to XL's by using a short ribbon cable & connector to "plug" into the XL cartridge jack. (?)

From: Greg.Goodwin@fmlynet.org
Message-ID: <266036.d552cc@fmlynet.org>
Source record: 10859

From...
http://desnoyers.org/retrochallenge/

Introduction
Do you depend upon modern computers, or are you a creative spirit who can push the limits of your old hardware in order to fulfill your everyday needs? The Retrochallenge is where you find out. This competition promotes the use of vintage hardware by establishing up three challenges. You are encouraged to enter any or all of theses challenges, to judge the creative works of other participants, or simply join in the discussions on our mailing list.

What are these challenges? If you enjoy creating original artwork, music, or programs on your legacy computer, then the creative challenges are for you. Simply do what you normally do, then submit your work to be judged by your peers. The second challenge is simply using a qualifying computer through the month of July, in a competition to see can survive a month without the latest in gadgetry. The third challenges judges how well you could communicate with the outside world on a retrocomputer.

So what is the prize? The excitement of participating in the challenge (everyone gets that one), and the respect of your peers. In order to help you gain the recognition of your peers, MLAgazine has gratiously offered to publish an article about the winner.

(6502 computers get a x3 modifier compared to the standard '030 computers which will be a modifier of x1, so running an 8-bit in this competition could be fun.)

You think you got what it takes? :)

It contains three Atari manuals:

1) Operating System User Manual
2) Operating System Source Listing
3) Hardware Manual

Really interesting stuff but well beyond my level of knowledge or need.

Photos can be seen within the auction:

I agree. I've sold a couple of copies of the Rodnay Zaks texts on ebay
and they always do well. A text or HTML version would make an excellent
online reference.

That's great! I didn't know they were available online!

I've had the earlier manuals, dated 1979 (purchased in 1981, I think),
but my manuals didn't include the source code, only the Equates.

Sorry I went off-topic but not to worry, I think the original books
will obtain a tidy sum. There are plenty of collectors here.

I wasn't posting it as spoiler for the auction. Paper versions are easier
to read and there will always be a market for the original.

That and the Z80 version by Leventhal were the books every serious
home-computer user had in the 1980s. I used to see them everywhere,
then in
bargain bins, then they disappeared entirely apart from a few copies on
eBay.

It's killing me that I can't find my copy of the 6502 book by Lance
Leventhal. My 6502 assembler knowledge is so rusty and picking it up
again is not as easy I had remembered it being. LOL!

I wasn't posting it as spoiler for the auction. Paper versions are
easier
to read and there will always be a market for the original.

...and I wasn't criticizing you. Sorry if it sounded that way.

I didn't/don't think your post will spoil the auction.

There are true enthusiast collectors here and they will definitely
scoop up the books.

Me, I just caught the nostalgia bug a bit. Some programming, maybe a
little gaming (with emulators and real Atari computers), gaining some
knowledge on things that I didn't learn when the Atari was new, that
sort of thing.

That's great! I didn't know they were available online!

I've had the earlier manuals, dated 1979 (purchased in 1981, I think),
but my manuals didn't include the source code, only the Equates.

Correction: Make that dated November 1980.

Ed,

I agree that he is probably a great guy, but what people are saying
is that his continual posting and multiple posting of his ads does
give the impression that he is desparate to sell his goods.

The Apple II groups has a special place for such ads, and there
should be one for Atari 8 bit groups as well, if there isn't one
already. That would be the place to post his ads where people
would go if they were in the market for Atari items.

Of course, there are those who just need something to complain
about and we have those in all groups, not just in the Atari-8
group. :o)

I seem to recall that there either was one other company, or a privat
person wanted to make some. Heck, I'ld love it, if somebody would pick
this up.

BTW I actually have one of those ICD cartridge expanders. Bought it
when I needed a printer and modem cable for my 850. I'm still using the
expander. With my BlackBox and an XE.

The expander is permanently plugged into the XE. It's connected to the
BlackBox using the cable that is intended to connect the XL to the
BlackBox. I do this so that the connection between XE and BB is
flexible. That way I can move the XE around on my desk a little bit
without damaging the edge connector. The only thing that could get
damaged is the ribbon cable. But a 50 pin ribbon cable and the 50 pin
connectors will probably be available for the next couple of years. I
even found a place where they give me the strain reliefs for these
connectors for free when I buy the connectors. Apparently nobody asks
for them.

CU Mathy

PS I haven't forgotten about the scans. I'm looking for a scanner and
my eye has fallen on the Canon Lide 500F, but I'm not sure yet if it
will scan 3D objects like motherboards. (Not that I need that for the
NS405 data sheets.)

No, my entry didn't lose. I didn't have an entry because I've never done
business with Bravo Sierra Computers.

I can recognize and appreciate Ben's KISS philosophy when it comes to his
posts and website content. However, this approach makes his post and
website very difficult to read if you're not viewing the content in a
40-column browser.

If I might make a suggestion, Ben may wish to have two versions of his
website content. Perhaps if Ben created content for 40-column viewers and
for regular viewers, he wouldn't get so much flack over how his
advertisements appear.

It would probably go a long way in improving the outward appearance of his
business as well.

Call me naive, but if Ben put a little more effort into making his business
look professional, he wouldn't have to spam as much.

Just my opinion.

2620. Chat Server For Atari Users

Newsgroup: comp.sys.atari.8bit
Date: 2005-06-22 05:36:27 UTC
From: You <you@cogeco.ca>
Message-ID: <BEDE711B.263A%you@cogeco.ca>
Source record: 10877

I am running a chat server for Atari computer users.

This is real time chat for the Atari Community. You do not need an account or a password and there are absolutely no restrictions.

To use the server just Telnet to: utoc.dyndns.org

It's that simple. You can even use your Atari to connect to this server if you're able to telnet from your Atari.

There are currently 2 channels available. Channel 1 is Atari 8-Bit and Channel 2 is Atari ST.

This is a brand new service, so if there's nobody there when you first connect, just give it some time.

Oh yeah, when you first connect to the server, you'll be asked to enter a name for yourself. This is the name that other users will identify you by. These names are not saved when you disconnect and may not be available for your use the next time you connect if somebody else is currently using the name.

Check it out...

2624. Re: SDX cartridge

Newsgroup: comp.sys.atari.8bit
Date: 2005-06-23 01:25:15 UTC
From: Phantom <phantomm@bellsouth.net>
Message-ID: <P9oue.46088$zm.34174@bignews4.bellsouth.net>
Source record: 10881

Hi,

Thanks for the URL.

I got all the ROMs except for the MIO 1.1. The code comes up on my
screen in my browser. All others
give me the option to save them.

BTW, I have a ICD MIO 1meg version. I was just wondering what one could
do with this ROM except
maybe make one if you have a damaged one?

Anyway, I'd like to have a copy just in case. Can someone check and see
if they have the same
problem as I am having?

Regarding the SDX roms, can these be used on the 1 meg Ram carts or is
there a different type
for that.

Looks like I'm going to have to go that route to get sometype of SDX
cart.
I'd like a SDX cart to use with my ICD MIO. Even if its not a original.

Also, I know a few of you guys burn your own ROMs. Thats something that
I'd like
to get into. I have a Tech background. What would be a good all purpose
ROM
burner to get ahold of?

I need one that will do 8-bit ROMs and related stuff and also
Atari ST-Falcon ROMs. Gals and the like. 16Bit and 32Bit stuff.

Any tips on good Burners and where to find them at a good price
would be most helpful.

I actually have some programs for the Atari 8-bit that I would like to
burn in a chip and put in a cartridge form.

Also have similar stuff for the Atari ST/E thru Falcon machines.

Any help is much appreciated.

I mirrored the website, got 286 PDF's, of the few I checked only one was
corrupt. Theres alot of C64 stuff mixed in as well.

2626. FS/FT : Large qts. of boxed/new ATARI 2600/7800 and 800 XL/XE cartridges :

Newsgroup: comp.sys.atari.8bit
Date: 2005-06-23 04:17:36 UTC
From: Ulrich_Sternaxe@gmx.de
Message-ID: <f16cbc23.0506222017.5977c877@posting.google.com>
Source record: 10883

Hello,

I have many boxed ATARI 2600/7800 games, most of the new :

PAL Games : 1.50 Euros each

Astroblast (Telegames, PAL) www.vectrex.de/c/astroblast.jpg
Big Bird's Egg Catch (CCW, PAL) www.vectrex.de/c/bigbird.jpg
Cookie Monster Munch (CCW, PAL) www.vectrex.de/c/cookie.jpg
International Soccer (Telegames, PAL) www.vectrex.de/c/intsocc.jpg
Kung Fu Superkicks (Telegames,PAL) www.vectrex.de/c/superkic.jpg
Pick 'n' Pile (SALU, PAL) www.vectrex.de/c/pickpile.jpg
RealSports Tennis (ATARI,PAL) www.vectrex.de/c/rstennisp.jpg
Super Breakout (ATARI, PAL) www.vectrex.de/c/superb.jpg
Super Challenge Football (Telegames, PAL)
www.vectrex.de/c/football.jpg
World Championship Baseball (Telegames, PAL)
www.vectrex.de/c/wsbase.jpg

PAL Games : 2.50 Euros each

Bogey Blaster (Telegames, PAL) www.vectrex.de/c/bogey.jpg
Chess (PAL) www.vectrex.de/c/chess.jpg
Mission 3000 (BitCorp, PAL) www.vectrex.de/c/mission3000.jpg
My Golf (HES, PAL) www.vectrex.de/c/mygolf.jpg
Title Match Pro Wrestling(Absolute,PAL) www.vectrex.de/c/title.jpg
Tomcat (Absolute, PAL) www.vectrex.de/c/tomcat.jpg
Weltraum Tunnel (BitCorp, PAL) www.vectrex.de/c/wtunnel.jpg

NTSC Games : 1.50 Euros each :

RealSports Football (ATARI,NTSC) : www.vectrex.de/c/rsfootvc.jpg
RealSports Tennis (ATARI,NTSC) : www.vectrex.de/c/rstennis.jpg
RealSports Volleyball(ATARI,NTSC) : www.vectrex.de/c/rsvolley.jpg

NTSC Games : 2.50 Euros each :

Galaxian (ATARI, NTSC) : www.vectrex.de/c/galaxian.jpg
Pole Position (ATARI,NTSC) : www.vectrex.de/c/polepos.jpg
Jungle Hunt (ATARI,NTSC) : www.vectrex.de/c/jungle.jpg

ATARI 7800 PAL : 1.50 Euros each

Mat Mania Challenge (ATARI,PAL) : www.vectrex.de/c/mat.jpg
Sentinel (ATARI,PAL,Lightgun only) : www.vectrex.de/c/sentinel.jpg

ATARI 800 XL/XE NTSC (PAL compatible) cartridges 2,50 Euros each :

Ballblazer (ATARI) : www.vectrex.de/c/ballblaz.jpg
Crossbow (ATARI) : www.vectrex.de/c/crossbow.jpg
Hardball (ATARI) : www.vectrex.de/c/hardball.jpg
One on One (ATARI) : www.vectrex.de/c/oneonone.jpg
Pole Position (ATARI) : www.vectrex.de/c/polexl.jpg
Star Raiders 2 (ATARI) : www.vectrex.de/c/starrai2.jpg
Tennis (ATARI) : www.vectrex.de/c/tennisxl.jpg
Thunderfox (ATARI) : www.vectrex.de/c/tfox.jpg

Hardware :

4 Euros each (2 units in 1 box) :

CX-50 Keyboard Controllers (ATARI) : www.vectrex.de/a/keyctrl.jpg

2 Euros :

Sears Paddle/Joystick Combo : www.vectrex.de/a/paddle.jpg

Most of the games are boxed and new, sealed.There are huge qts. of these games available, usually 50 or more copies.

These games are great for resale or for homebrewers who need empty cartridge shells.

Telegames cartridges contain 4K or 8K EPROMs, this may be interesting for homebrewers.BitCorp games contain 4K EPROMs.

I can sell the games OR trade for ATARI 2600/7800, ATARI ST, ATARI 800 XL/XE, Commodore 64, AMIGA, NES, Gameboy, ATARI Lynx, Colecovision, SNES, Intellivision, MS DOS or other games.

I can ship worldwide and I accept paypal.

Shipping depends on the final weight, it's 12,90 Euros for up to 15 games, 32 Euros for up to 40 games and 62 Euros for up to 150 games. In Europe, shipping is 8,60 Euros for up to 16 games, 17 Euros for up to 40 games and 32 Euros for up to 150 games.

If you're interested, please write to my email-Address.

Nice.

I think the hardware guide is one that has been turned into HTML.
http://www.howell1964.freeserve.co.uk/Atari/800XL/atari_hw/atari_hw_contents.htm

Or at least, the chip data sheets have, the hardware guide seems to be the
data sheets rolled together.

Hi,

Some of you may be interested in a new book that has been published by a small specialist publisher. The book reviews and discusses over 200 home computers and consoles, including the Atari 8bit, 16 bit and console ranges. It manages to pull off the unusual combination of being really well designed (224 full colour pages) and informative (lots of interesting facts about the systems, key titles and market history).

Anyway you read more about the book and also have a look at some example pages at my web site:

http://www.jcec.co.uk/book.html

I'm in regular contact with the author, a really friendly ex-games journalist, if you have questions.

Cheers
John

I posted a similar message in a older thread.

Anyway, I know some of you folks burn your own ROM images in chips to be used in cartridges and the like for the Atari 8-bit.

I am interested in getting a EPROM Burner that will allow me to do this with
8-bit Roms and also 16 and 32 bit Roms for the Atari ST/E thru Atari Falcon
computers.

I have some Atari 8-bit programs that I wrote which I would like to burn into
a cartridge type chip to be used on the Atari 8-bit. Also have similar stuff
to do on the Atari ST/E Falcon Line of machines.

I was wondering if anyone here who has experience with these types of Burners could give me some info on what would be the best type/model of Burner to do these types of projects?

I need to burn different types of chips such as GALs. And if possible I'd
like a burner that could duplicate a chip inserted and burn a exact copy.

If anyone here could pass along some info, it would be much appreciated. URLs and the like also.

Also, I need a source for blank Atari 8-bit cartridge PCBs and Atari ST cartridge PCBs.

And respond in e-mail please,

You can contact me at phantomm@bellsouth.net

Thanks
.

If you only need a device programmer that can do eproms and you
have access to a PC, then one of the really cheap parallel port programmers
will do just fine for you.

Go to eBay and search for 'Willem Programmer' and you will find many
boards that can easily and quickly program the small eproms you will be using
for 8-bit and ST carts. These are open design programmers with free software,
so as long as you wont need technical support from a vendor, you will be fine.

> Also, I need a source for blank Atari 8-bit cartridge PCBs and Atari ST
> cartridge PCBs.

You can get 8k/16k PCBs that fit into standard Atari cartridge cases
from www.atariage.com. These accept 2764 or possible 27128 eproms.

I did the Ultima III conversion. I just want to say that it's not FULLY
tested, but if any issues come up, I'll try my best to fix them. Also, I
am going to write a utility to copy the characters from the cartridge onto
a disk and vice-versa.

2646. Ulitma 3 won't work with 2 drives

Newsgroup: comp.sys.atari.8bit
Date: 2005-06-24 13:55:50 UTC
From: Son of man <sonofman1@comcast.net>
Message-ID: <M-SdnbQiGMRvjSHfRVn-pg@comcast.com>
Source record: 10803

I kept trying over and over in the emulator and didn't know why it kept crashing when i said journey onward. Now I know, i have to swap the playter disk into drive 1, because the game doesn't look for a second drive.

2647. Atari++ 1.41 sound problem?

Newsgroup: comp.sys.atari.8bit
Date: 2005-06-24 15:46:08 UTC
From: Son of man <sonofman1@comcast.net>
Message-ID: <naadnaLRJf9QtyHfRVn-vA@comcast.com>
Source record: 10804

My sound isn't working with this emu. Maybe someone has a .conf file they can send me that works to bcozier@bellsouth.net

thanks.

Im not 100% sure but I think that bug was a product of the cracked game you find on the net. The original if Im not mistaken, asked for a number of drives at the start and would use all four if selected.

Steve,

Are you aware of any knowledge about the PAL chip on the Spartados X cart?
I have two blank Spartados X boards that I would like to populate.

Must'a been a different game. Ultima III came on a single flippy disk.
What you did was use side one for booting and a copy of side 2 for game
play/character storage.

There was also an easter egg if you ignored the insert side 2 or 'create
a character to start' prompt, I can't remember exactly. If you just went
load character or something you would get the a few prerolled characters
with Ultima insider names like Shimano<?>.

I am having XL 5-pin DIN to SCART cables made by a professional
manufacturer; these will be the finest Atari cables ever made - better
than studio quality - using top of the range cables and connectors.

If anyone in this group would like one please email me; I may as well
get a few made at the same time. They will be expensive though.

Thanks everyone!

The XL does not have RGB output so most of the SCART pins are unused.

DIN to S-video plus phono is simpler.

And one can connect the phono pins to a hi-fi system.

Absolutely. And my TV has an S-video jack too. Unfortunately the weight of a high-end cable puts a lot of strain on an S-video socket; for once the much-hated SCART has an advantage in its bulk!!

2660. Wanted RGB Monitor

Which output driver are you using? On Win32, there is SDL, DirectSound
and WAV (the latter only saves the sound, it doesn't play it). On Linux,
I've SDL, Oss, OSSHQ and ALSA to offer.

So long,
Thomas

Howdy friends,

is there a way to use Visicalc with a XEP80? As far as I remember,
Visicalc is using standard graphics 0 text mode so it could work. I've
never been a big friend of the XEP80 due the bad usability (joystick
port suxx!!) and the poorly support for serious business applications.
But Visicalc surely would be a great thing to use with XEP80 on the 8bit.

Hi,

> I tried all.

Well, I afraid that still doesn't answer my initial question,
namely "what is all"? (-; Specifically, are you talking about
the win32 version or the Linux version as the answer may really
depend a lot.

> Do you have a .conf file I can try out?

Various, but that won't help you much unless I know your
target architecture. If even SDL cannot get out a sound,
then something's considerably broken.

Which sound chip is this, if I may ask? (Sound hardware).
Try "alsamixer" on Linux, the device manager on Win32 machines.

Then, please check the sampling frequency in the sound setup; some
chips only allow fixed frequency output here, something like 48kHz or
44.1kHz, depending on the hardware. It might help to try here a
bit. Actually, the program *asks* the hardware which frequencies it is
able to deliver, but I've seen several notes that especially some
DirectX drivers are "considerably broken" and do not deliver this
data.

If you see any error messages, please let me know, too.

BTW, you can edit the ".conf" files with an editor of your choice,
that's just plain ASCII.

So long,
Thomas

Source record: 10831

Anyone got the source code for the Atari 400/800 OS and/or BASIC?

I've found a huge 6 MByte pdf here:

http://www.strotmann.de/twiki/bin/view/Infothek/AtariTechnicalReferenceNotes

I can't just stick it through an assembler,
but I can disassemble the binaries and try to re-create the source
by adding the original comments.

No way am I typing in all the mnemonics as well!

Made a start on the project here:

http://homepage.ntlworld.com/kryten_droid/Atari/800XL/atari_os/atari_os_contents.htm

but have only done 1/16th of it so far (the zero page memory allocations).

Just wondered if anyone already had the source code in text form?

K.

Hi,

> Anyone got the source code for the Atari 400/800 OS and/or BASIC?

Not the original, this would be a copyright violation. But if
a work-alike (plus bug fixes and improvements) is good enough
for you, then yes, here's a version that assembles with the CC65:

http://www.math.tu-berlin.de/~thor/atari++/

On the page down, check for os++.tgz.

> Just wondered if anyone already had the source code in text form?

"Almost". Os++ keeps a couple of improvements made in the XL series,
minus the parallel port stuff, plus an built-in FMS and DOS, plus
a couple of improvements (optional text window for Gr.9 to 11 and
others).

So long,
Thomas

Sorry about the lack of info...

I'm using the Win32 version and tried all sound options, WAV, DirectX and
SDL.

Can you supply me a .conf file for the Win 32 version at my email thanks.

I think that's a fait accompli, so much Atari stuff is already on the net
and there is no real Atari company to be angry about loss of earnings etc.

The spirit of the law is to make allow innovators to gain the rightful
profits of their labour.
They've all done that, and wound up business when profits were mined out.

Yep, did that but the file is not there.

I'll have a go at re-sourcing the code from the binary, using the cc65
disassember features.

2678. Hard Disks and MIO

Is there a program that will do a surface scan and map out bad sectors on hard disks? I run the hdphmt9 program and it formats the hard drive, then you run the hdfmtdir or whatever it is and it makes it usable. But I want something to scan for bad sectors.

Thomas

I attempted to take the PDF and OCR it using OmniFormat, PDF995s, and OmniFormat OCR Module (a Free Windows based suite that supposedly converts various graphics formats to PDF, PDFs to various graphics formats, and OCR of all). OmniFormat broke down the PDF into individual JPEGs but the image quality is too low to obtain acceptable OCR or the OCR module is not good enough.

Sorry, I tried.

At least with separate JPEGs I can turn the images from landscape to portrait mode and be able to read the source code on the screen.

Not sure, but FLASH BACK by ICD might do this.

I have the software and manual but I'm not near it to check.

I did see Flashback on a Atari FTP site awhile back.

If you don't have it, you might want to get it.

Got a question that you might can help me with...

Years ago I bought a 8bit hard drive system with ICD MIO.

The system had 2 hard drives. One is a Seagate ST225 and seems to have
a Adaptec 4000 controller board installed on the bottom of the drive.

The other drive does NOT have a controller board on the bottom of the
drive.

However, In the case was a Adaptec 4000a Controller card and both drives
were connected to it with cables. It ran just fine. But the powersupply
went
bad and I've not replace it yet.

Does each drive need its own controller card or can you run more than
one
MFM/RLL drive off of one Adaptec controller using the MIO?

The Seagate 225N has a built in controller. The other one I'm not sure how
many drives the adaptec controller can use. I think you can address 7
devices. I'm not really sure about the atari. I know I have two 225n
drives and one is id0 for boot.

Last-modified: March 25, 2005

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

That doesn't change the problem, though. The Atari owners (now Infogrames)
haven't released the sources as far as I'm informed, so the problem
remains as stated.

> > On the page down, check for os++.tgz.

I think that you can have two MFM/RLL drives on each controller card. I used to have it and it worked fine, but after a move, nothing comes up on anything. Can't even reformat or start over. I tried two different 4000A controllers and several drives. I might have forgotten how to do it or need the same low level formatter as the original poster does. Anyplace to buy Flashback?

Thanks.

I've had similar problems.

Whenever I scan a document for archival, I scan it to 300 dpi monochrome PNG (lossless) so that it is good enough for OCR if someone ever wishes to do so.

When putting images on the web to be read on a screen, I use copies at 100 dpi.

I also avoid scanning to pdf because it creates one huge document to download before starting to read, and it is a pain

As always, JPG is the wrong format for storing scanned text.

> At least with separate JPEGs I can turn the images from landscape to
> portrait mode and be able to read the source code on the screen.

The pdf file security settings allow me to rotate the pages for viewing (which suits all but the cover page), but not save it like that. Another reason I dislike pdf files!

If I had that book myself I'd re-scan it for you.

Foggy<REALLY foggy> memory but SDX wasn't compiled or written on an Atari 8 bit. It was done on a one off compiler/assembler on an IBM. Could be a Keith Ledbetter cross compiler, like I said foggy memory. Unless FTE gave out copies to subcontracters there would be only one copy available and Mike would have it.

I am 90% sure the source code for SDX was specific to the compiler which is not in distribution. IOW: Even if you had the source to it you would have to figure out what it does and how to do a translation.

At some point in time it becomes academic for several reasons. SDX was more of a power user toy. If you needed a huge amount of free memory for running a BBS or programming it was the tool to have. Not a lot of BBSs left and the same holds true for programmers.

2692. What's Sparta DOS X?

Newsgroup: comp.sys.atari.8bit
Date: 2005-06-28 16:37:02 UTC

Source record: 10699

Please excuse my inexcuseable ignorance (again) but what is Sparta DOS X? Yes, I know it's a third party DOS for Atari computers, but is it more or less advanced than Atari XE DOS? The "X" isn't a version number; does it mean "uniX" like features (pipes, filters, subdirectories, etc) ?

I understand there is no multitasking enironment for the Atari, but what about task switching? I read somthing about a program called "Snapshot" that seems to task switch, or as they put it in the old days, "create seperate virtual computers" using the extra RAM.

Did anyone make an adapter to use a 1064 on an XE?

hi Rick,
thank you for your answer. having the source would be nice but I can
get by without that. there are some nice utilities in the cart I would
like for the SpataDOS 3.X versions. I do a lot of my Atari work for
the Cross Assembler from Kieth Ledbetter. it is a nice piece of work
on his part.
anyway, the file format for those cart *.com files is rather odd,
would like to understand that format better.

hi,
both the MIO and BlackBox low level format utilities will scan for
bad sector. If any ar found then they are mapped out and the drive
formats again with the bad sectors taken out. Also, the fmtdir.com
from the BlackBox utility disk will checl for bad sectors and write
them to a special file "SECTORS.BAD" IIRC.

SpartaDos X is a ROM based DOS that runs on a cartridge. It has a pass
through connector on top to attach an additional cartridge such as an R-Time
8 (real time). It eliminates the need to boot off of a floppy, plus has
some powerful additions to it.

Yes I used this program (snapshot) with my 130xe. There was a
terminal program (I believe it was called Bobterm, but 15 years ago
is pretty hazy for me) that allowed you to play "breakout" while you
were downloading, so there was that one program for the 8bits that
multitasked.

2698. I think I found the sound problem in Atari++ 1.41

Newsgroup: comp.sys.atari.8bit
Date: 2005-06-29 02:12:38 UTC
From: Son of man <sonofman1@comcast.net>
Message-ID: <P46dnVwUxu0Gnl_fRVn-uQ@comcast.com>
Source record: 10705

apparently when I boot my machine the default master volume is set half way. I usually have to turn it up using volume controls to about 90. If I don't turn up the volume after booting, the sound in Atari++ is working. If I turn up the volume using windows volume controls to about 90% from the previous 50%, and then run Atari++ it seems the volume is too loud and it cuts off the output altogether. Reducing to 70% produced very distored sound. So that's the problem I was having for whatever its worth.

2699. Re: Hard Disks and MIO

All of the SCSI / SASI controllers that I used with my MIO (and there were a bunch of them - Adaptec 4000; DTC-510b, Xebec and others) supported two drives - In fact, I've never seen one of those controllers that didn't support 2.

Work alike/MS type commands. It had a default batch type file in its ROM that would set up several options like reserving 64k of banked memory for OSI language like BasicXE. On a 256k machine it really came alive since you could add a batch file to your boot disk and set up your machine as you wished. For instance you could set up a 192k RAMDISK, copy all the frequently accessed BBS files to it, load the RS232 handler, then run your BBS program. You could access 8 drives of up to 16 megs and RAMDISK w/o having to change anything.

For programming, lets say you were writing ML routines to be accessed by BASIC. You would just have your ED/ASM plugged into the SDX and compile to page 6. You would then switch to built in BASIC just using commands and test your code. Doing compiles of large programs to and from RAMDISK made doing large programs almost tolerable.

There were a lot of other utilities in SDX IIRC. I think it had a ARC type utility, support for high speed disk drives, handlers for ATR8000, etcetera. I may be thinking about one of the other Sparta for the ATR handler but heck, something like a 256k or 512k ROM in that puppy meant a lot of goddies were included.

For the average person that just wanted to play PacMan it didn't have much value. A lot of the functions like directories and 16 meg disk access were handled by MyDOS. Even when SIO2PC came along I found bugs with my version of SDX<2.19?> made it unusable: That was pretty much the last nail in the coffin for me.

2701. Re: Update: MIO and hard disks

Looks like HDFMTPH does a physical format and then verifies the sectors.

The HDFMTPH6 doesn't include low level formatting for the seagate embedded drives.

The HDFMTPH9 seems to work for other seagate embedded drives other than the st225n.

shrug I don't know... Seems like the HDFMTPH is the only one that verifies and maps out sectors.

Yes it had a ARC utility built in. I used that feature alot when I had
mine.
It was fast to ARC or UNARC to the RamDisks in the MIO.

Yes there were alot of extras in the cart.
They were all protected IIRC, meaning you could use them from the
cart. But you couldn't copy a file such as a driver from the cart to
disk right?

>
> For the average person that just wanted to play PacMan it didn't have

I had 2 at one time and sold them after I moved on to other Atari
Computers.
Didn't sell my MIO and hard drives or software and a few others good
bits.

But now, I really could use a SDX cart. I'd like to get a original one.

But with the ROMS available. One can make their own with a memory cart.
Or so I've been told.

Has anyone did this yet if so, Does everything work correctly?
I know there's no pass thru, but what about everything else?

Okay, the link downloaded os++.tar but my windows machine does not recognize
tar format.

I'll have a look for a trustworthy tar extractor.

Just a suggestion, but is zip format the most common format (at least for
the general public running Windows)? I use zip format for stuff I put on the
web. I'm guessing Unix/Linux can cope with that.

Using Mandriva Linux here, no problem with *.zip files at all.

You might have to install the zip utility (RPM for Mandriva) but other
than that, its dead easy to use. Command line or gui.

I'm really foggy on that too. I think it probably had a kernal in the
ROM that was accessed by just about every utility so they wouldn't run
w/o SDX being plugged in. I think there was one odd ball way of looking
at or transferring programs, like using redirection to pipe a print to a
disk file or something, but I can't remember what it was.

I think you need a SDX PC board because of the decoding. I don't think they are available. Once again I can't remember exactly what the adresses were but IIRC they worked similar to the OSS supercarts, i.e. writes to $D5XX bank switch but were the OSS carts would respond to any write in that range, address $D501 functioned the same as $D5F1, the SDX was addressed at $D58X or $D5Fx and up and had enough latch to decode the entire ROM. All the code in the carts only used the lowest addresses available so you were safe with SDX. The information was somewhere on the web. It was someone in the group pointed me to it. Maybe goggle supercart and SDX.

I made a couple of pass through carts with built in RS232 and single D/A converters. I remember it being a hassle, particularily because of my limited number of brain cells, to get it to only respond to a limited address range to work with Supercarts and SDX. Made for an odd stack of my homebrew cart with SDX and Action! plugged on top of it. Leaning Tower of Carts.

See someone else's comment on the size of Infogrames. (I'll take their word for it :^))

> There is no way I can see that they are going to
> build a new hardware,

Except, they already _did_. I mean, it's not a PS2, but...

http://www.atari.com/us/games/atari_flashback/7800

and:

http://www.classicgaming.com/features/articles/flashback2/

The latter is _actually_ an Atari-compatible device (whereas the original Atari Flashback is based on a Nintendo-NES-on-a-chip).

> People won't Q up to play PacMan on the PSP or Xbox 360,

Define "people." There are a lot of us out here. The first disc I bought when I got my original PlayStation was the Williams arcade classics disc (the one with Joust and Sinistar).

Aside from Super Mario World, the only cartridges I have for my Gameboy Advance SP are classic arcade game compliations. (Pretty much every game I have _for_ my GBASP were made before the _original_ GB came out!)

> but they won't mind paying a few quid to download it to their phone.

And that's where people like me come in. >:^) I write cellphone games for a small company in the Bay Area.

Except for all of the classic games they're re-releasing...

http://www.atari.com/us/genre/arcade

* "Retro Atari" for the Gameboy DS (which is apparently pretty awesome,
though I've never even tried a DS, let alone this game)

* Atari Anthology for PS2 & XBox

* Atari: 80 classic games in one (Windows)

* Atari Arcade (Windows)

* Atari Anniversary Edition (Windows)

* Atari Flashback (a stand-alone console with built-in games;
not so well-received)

* Atari Flashback 2.0 (coming this summer; highly anticipated)

Linux all the way, baby! ;^)

The lowest-end models are something like:

200MHz ARM CPU
32MB RAM
32MB Flash (file space)
320x240, 16bpp backlit LCD touchscreen
Built-in QWERTY keyboard
CF memory & device slot
SD/MMC memory card slot
USB slave connector
Linux 2.4 kernel
Qtopia desktop environment (tho some people replace their entire s/w stack)

There're something like 1200 (at least) pieces of software for the things,
and numerous models out, these days [1], including Atari emulators! :^)

Sadly, discontinued in the US, but the Japanese market are getting
some sweet devices. (Some with 128MB of Flash, 64MB of RAM and a 4GB
HDD built-in! [2]) You _can_ get them in the US, but it'll cost you [3].

Aha, source to re-create the XL/XE ROM contents. Nice.

Having read the README, I see it is from a guy called Sidney Cadot.
Do you think it's okay for me to put the sources on the web in html format,
so long as I assign appropriate credit?

I suppose the XL is the most advanced version, so recreating the 800 source
is only of historical interest to replace the 6 MByte pdf file.

Cheers, K.

From: Vidar Olavesen <olavese@online.no>
Message-ID: <NtadnQfUvfRA3Vnf4p2dnA@telenor.com>
Source record: 10740

I just got it working now, but I have an old setup, which I like very much when programming. I use TopDos, Textpro and AMAC for coding. I made a small partition to fit this on and that seems fine enough. However, I used to have the MIO connected and there I swapped drives from 6 to 1 and that made TopDos work, but the MyIDE can't swap drives. Any suggestions on easy fixes?

Take Atarian care

You're having such a hard time because your prices are too high. Lower
them until sales pick up. Match the economic times. Collectors don't
have the expendable income like they did a few years ago. Compare prices
on ebay now to what they were before the tech bust. They're like 1/3
what they used to be.

My other critical advice for him would be not to use Xmas in July as an
advertisement. It might offend some religous people (I'm a little
dissapointed but not offended) because the primary meaning of Xmas is a
religious celebration, not a means to market merchandise (remember, "Have
you made my Father's house a den of merchandise?")

I realize that many companies do market at Xmas time, however I think "Xmas
in July" sale is taking it too far.

Just some helpful criticism, not a flame.

I have no idea where one could buy it, unless you find it on ebay.
IIRC, Flashback is mostly for backing up your hard drives.
It's been awhile since I've used it though.

Now recently, I did see the program on a Atari 8-bit FTP site.
But I can't remember which one. Have a look and you might find it.

Also, I have a MIO utilitie disk from ICD. I have forgotten whats on it.
And at the moment I can't tell as my 8-bit monitor went out on me.
So until I get another monitor, I can't check out my disks.

phantomm@bellsouth.net

2738. ICD MIO Utilitie Disk

Newsgroup: comp.sys.atari.8bit

I had forgotten that I had this disk until the other day.
It's an original ICD MIO utility disk.

I'm not sure if it came with the MIO or was sold seperate.

Anyway, my 8-bit monitor went out on me. And I can't
check my disks until I fix it or get another.

Anyone else have this disk, if so whats on it, I can't remember if it
has hard drive formatting sofware on it or what exactly.

I have another disk that has some of the HardDrive formatting
programs listed on the label.

BTW, if someone in the US has a MAGNAVOX PRO. RGB Monitor
for sell, do contact me.

There is a similar one called Phillips Magnavox 80 RGB or similar.
They are about 13 inch, and have a door that opens on the bottom
which hides the controls. There is a Green button and a CVBS button.

On the back there are a few ports. And they can also be used with
a Atari ST.

Contact me at phantomm@bellsouth.net
if you have one for sale.

No, Xmas is Gifts, Party's, Egg-nog, and decorations.

Christmas is the religious celebration.

2743. 65xx library for Eagle

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-01 07:28:55 UTC
From: Euphoric <nospam@microsoft.com>
Message-ID: <42c4f0b8$1$30042$636a15ce@news.free.fr>

Hello all,

I am currently designing a 6502 board with Eagle CAD software, and since no 65xx library is in, I have begun developing one...
For now, I've put in a NMos version of 6502, plus a CMOS version (in DIP and PLCC packages), and also DIP and PLCC packages of 65816 and 6522.
I plan to add other peripheral chips like the 6551 ACIA, etc.
Anyway, I'm a relatively new user of Eagle, so this first library might not be perfect, but if this can be of use to someone, don't hesitate to ask...
Ah, I should have asked first: perhaps someone has already built such a library ?

Cheers,

Fabrice

Actually, it's well known that Xmas was hijacked from the pagans to aid
in the transistion to christianity. For all we know, Jesus' real
birthday could be in July!

Most historians place it in August, although some say it might have
been in March.

When they first came out, I believe they were limited in number made or
too expensive for the average 8-bitter.

For years I only knew one guy that had one and never saw one for sale
until
EBAY.

I have a version of the Richmonds Word Processor thats suppose to be
XEP-80 compatible. Haven't tried it out yet.

Other than that and Atari Writer, I don't know of any other as I have
only had
mine about a month.

Why do you think there's a descrepency? What method did you use
to backup your drive? I guess you're talking about 16 meg partitions
on IDE/MIO/BB drives. You could use a CRC program to check
that two copies of the same program are actually the same, this could
be done for all the files in a directory with a CRC16 checker I wrote.
I think you'll get a better response if you provide more info.
I think my CRC program pukes if it encounters a directory in the files it
is checking.

Speaking fdisk and all with the MyIde, exactly what format is a MyIde drive in? I mean you have the pockets of space that hold the active drive images, and then you have this area of space that holds the images thereafter. But what format is all this held in? .
To answer anyone curious, early on when I got my current drive from Mr. A, I tried to back it up with Ghost and another program we used at work at the time, Altirus... nada! Even at a low level the PC tools were not happy copying this. It is wild. So would love to know. .

Yes, you can swap drives, with another program that you load. Two have
been created, one by me and another called myswap11 or something.

Here's mine:

http://www.jeffersonsauctioneering.com/atari/myide

These don't work with the new flashcart yet, well actually Sijmen's new OS
version on the flashcart. I'm working on it.

> Yes, you can swap drives, with another program that you load. Two have
> been created, one by me and another called myswap11 or something.

Thanks! I do however think somethings wrong with my MyIDE. If I setup a disk (tried several) it still insist on being initialzed every time I use FDISK. And I have setup the FDISK.BAS to use Image loader, but when I try to use the Manager, it errors.

I got my MIO back up, so for now I am in no hurry, but hope to get the IDE interface working too. I also have problems with the one I bought from Jerzy Dudek. It partitions fine, but won't softformat and MYDOS either won't format the partitions. Seems like I am out of luck. Tried with brand new drives and old ones. Anybody have a program that would make the polish interface work?

2781. Re: Chat Server For Atari Users

Newsgroup: comp.sys.atari.8bit

Source record: 10784

It's pretty darned static. Actually, it's a sticky IP address and I'm registered with dyndns.org. So the URL (utoc.dyndns.org) will always get you connected to the chat server.

There generally isn't a whole lot of traffic on this chat server because people tend to connect while there are no other people connected. I was thinking that scheduled chat sessions would remedy that situation.

One other thing, this chat server is not running on an Atari computer. It's actually running on my Mac web server. I had a bunch of extra bandwidth and clock cycles so I tossed some chat software on there. I haven't told too many people about this server (just the people here at c.s.a.8) so it should be relatively free of trolls that don't use Atari's.

I expect that this server will eventually end up running on my SGI Indy.

I would prefer to keep it Atari specific because the Atari 8-bit computers were my first true love. (I progressed from Atari -> Macintosh -> SGI)

2783. Atari Chat Server

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-04 01:33:40 UTC
From: You <you@cogeco.ca>
Message-ID: <BEEE0A34.2EE3%you@cogeco.ca>
Source record: 10786

```
Atari Chat Server - 24.57.169.235 - utoc.dyndns.org

There are currently ten chat channels on this server. They are:

1) Atari 8-Bit
2) Hot Topics
3) Internet
4) Computers
5) Work
6) Music
7) Games
8) Talk
9) Help!
10) Sports

To get a list of all available commands, type: /HELP

To get a list of all available channels, type: /CHANNEL

To switch to another channel, type: /CHANNEL # (Where # is the
channel number)

To logout, type: /QUIT

Most of the commands are pretty straightforward. I am letting the users of
the server change the channel subjects to whatever they desire. If you
wanted to change channel 6 (Music) to a channel on the subject of Atari
Jaguar, for example, you would simply do the following:

Goto channel 6 (Music) by typing: /channel 6

Once you are in channel 6 (Music), you can change the subject by using the
/SET command as
follows: /SET SUBJECT Atari Jaguar

The next time anybody does a channel list by typing: /CHANNEL the
list will display channel six as being a discussion on the subject of the
Atari Jaguar.

There are a bunch of other commands available too. This is a really easy
chat system to use and is perfect for those people that use older machines
that cannot take advantage of other chat servers.

To connect to the server with your 8-bit, just telnet to the server with
something like BobTerm.
```

2785. HDFMTPH versions for Atari 8-bit hard drives

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-04 04:25:54 UTC
From: Phantom <phantomm@bellsouth.net>
Message-ID: <gS2ye.23898$Tt.1550@bignews3.bellsouth.net>
Source record: 10791

How many versions of HDFMTPH are there?

It would be good for someone to list all versions they know of,
plus what each version did.

I have a disk with some of these, but it's been sometime since
I've setup a new hard drive on my ICD 1meg MIO.

It's on my list of things to do, as I get the items I need.

And would like to use the best version of HDFMTPH to get
started with.

I will be using at least SpartaDos 3.2D for system software.

Going thru my 8-bit hard drive box. I came up on another
treasure.

2 versions of the SpartaDos Tool Kit. Manuals and Disks.

Maybe some folks didn't know that there were 2 versions.

Does anyone know if there was an official 3rd version?

In the versions I have, most of the files are the same but
the file sizes are different. And there are at least 2 new
programs on the newer? version.

I remember the ToolKit being quite useful.

DISKRX is the spartados disk editor, it edits sectors and rebuilds
directories and etc.
CLEANUP detects file structure defects in spartados and rebuilds
Directory structure.

CleanUp is one of the programs thats in the Upgraded version and isn't
in the
older version.

PROKEY is another new one not in the old version. It adds up to 20
Programmable function
keys, path prompt, screen color change, IBM style recall console keys
and more to
SpartaDos.

I remember both DiskRX and CleanUp saving info on my hard drives on more
than
one occasion. Especially if the Directory structure got screwed up as
sometimes it
did and ya didn't know it until a major problem happened or you ran
CleanUP.

So I used CleanUP often just to check.

These two are very useful on hard drives running spartados.

I know Thomas had some problems with his hard drives, These tools maybe
what he and others need if they don't already have em.

There are other useful tools in the kit.
Like a DOSMENU and MIOCFG that lets MIO owners save and reload MIO
configurations.

Just thought some maybe interested in this info.

2787. atari++ 1.42 stable

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-04 11:03:17 UTC
From: Thomas Richter <thor@mersenne.math.tu-berlin.de>
Message-ID: <dab51lrpm1@mamenchi.zrz.TU-Berlin.DE>
Source record: 10794

Hi folks,

a new release of the Atari++ emulator for Linux and Win32 is
available for download at its home page:

http://www.math.tu-berlin.de/~thor/atari++/

This makes again a new stable release (it's been time, the
old stable was rather outdated).

So what's new this time:

- Fixed race condition when switching the resolution, could
cause crashes.
- Fixed Antic CHARBASE switches, did not keep care of
horizontal scrolling correctly.
- Fixed leaking key presses from the GUI to the core.
- Fixed PIA Port A handling, Port A input is non-buffered.
- Fixed Monitor backspace key on some broken ncurses
implementations.
- Added "graphical" single-step trace command for the monitor.
- History of the monitor is now a tad smarter and buffers un-
finished lines.
- Fixed "dummy writes" for INC and DEC commands.
- Fixed player horizontal split, did erraneously remove the
old player.
- Fixed timing of the pokey timers, should be more precise
now.
- Fixed XIO for serial baud generator, argument zero leaves
baud rate alone.
- Fixed serial input counter for concurrent mode
- Fixed state parser, is now less sensitive to CF/LF vs. LF
confusion.

I especially want to thank Don Fanning and Sebastian Pachuta for
their time reporting a couple of bugs in the 1.41 release. I hope
they're more or less fixed in the 1.42 by now. Thanks, folks!

So long,
Thomas

What's on my disk is
HDFMTPH.COM
HDFMTPH6.COM
HDFMTPH9.COM
README.DOC
HDFMTDIR.COM
PARK_AD.COM

That's it. I also have another disk, which I think corrects the MIO's faulty
19200 BAUD problem. Hispeed MIO or something like that. It's on my DOWNLOAD
page at : http://games.nmi.no/atari/a8dl.htm

Take care

What I don't understand is this: I bought some hard drives off of Ebay
which appeared to work fine. Used the HDFMTPH program to set one up, used
the HDFMTDIR to setup for SpartaDOS, and still get bad sectors. Obviously
sectors aren't getting mapped out when bad. Do I need to hook this up to a
PC and use Seagates utilities? Argh...

It's been a LONG time since I formatted one (probably 10 years - it still
works fine) but I think I did my Seagate ST 225 with HDFMTPH9. I also have
a bunch of different ones. There is a file on my 'website' that has a bunch
of MIO stuff in it - unfortunately I cannot remember what is there but you
can get to it via the link below.

Is there a document which describes the overall strategy and operation of
your emulator? The OS kernal for a complex emulator would be an

interesting learning tool.

Of the emulated Os or the emulator design? For the latter, there's
a file named ARCHITECTURE in the distribution; it's pretty old, but
it should give some basic ideas about its design.

So long,
Thomas

HDFMTPH9 has an option for 'embedded scsi drives'. This one works. I used
the regular hdfmtph because after it was done it did a 'verifying sectors'.
That really didn't seem to do much good though. Maybe i'll try the HDFMTPH9
next and see if the drives work better.

I have about 5 of them, hdfmtph, hdfmtph4,6,8 and 9. hdfmtph6.com
was the one that worked for me with a adaptec 4000a and ST 225 HD.
HDFMTPH6 and probably the others, isn't very user friendly, if it

is encountering errors, it will run forever, without any notice at all.
I learned that something was wrong if the lights were blinking for over
5 or 10 minutes. It could be that different hdfmtph's are for different
type drives, I found no docs on them.

Source record: 10656

Opps, I lied, I do have a hdfmtph doc.......:
"
HDFMTPH6 is the general purpose
physical formatter for most drives
and controllers. It provides a
fast format with verify passes and
remapping for bad sectors.

HDFMTPH6 does not support the
Seagate ST225N imbedded SCSI
drive. Try the older HDFMTPH for
those drives. After formatting,
you should set the correct start
and end+1 sectors for your
drive(s) and then run the HDFMTDIR
directory build program on each
drive partition. Remember to save
the configuration when all finished.

HDFMTPH9 is the main formatter modified
to work with NEWER Seagate embedded
SCSI drives. Only those drives with
the newer firmware will work properly
(this appears to be 1.2 or greater).
Earlier versions of Seagate embedded
drive will only format 512 byte
sectors. If your drive formats but
shows only half the sectors it should
have, and you get an error when trying
to write to it, then chances are it
has the older firmware. Be careful!

PARK_AD is the park command for
Adaptec controllers. Syntax is:

PARK_AD [Dn:]

This moves the head on the physical
drive to the innermost cylinders.
It is a good idea to park the head
before transporting the drive and
especially before shipping it.
There presently is no park command
for other controllers.

```
All new MIO files will be posted on
our BBS for downloading as they
are created or updated.

ICD BBS 815-968-2229
"
```

Oh well, here's something I wrote, because I can't remember stuff like this:

0,70
Some Notes on using Hard Drive(s) with MIO
Russ Gilbert

These notes cannot/do not replace the MIO owner's manual. It is
intended to give some helpful hints that the owner manual may leave a
bit unclear.

The MIO can only use hard drives with 256 byte sectors. These would be
only the older MFM, RLL and SCSI hard drives, probably less than 100
megs in size.

For MFM and RLL hard drives, a SCSI to MFM or SCSI to RLL
adapter/controller must be used. The most common is the Adaptec 4000A,
aka ACB-4000A controller, used with a Seagate ST225 20 meg hard drive.
Any 256 byte/sector mfm hard drive can be used with the MIO and 4000A,
however. The RLL Adaptec controller is the ACB-4070. I don't think
using RLL drives with the 4000A or a MFM with a 4070 is a good idea.
256 byte/sector SCSI hard drives exist, such as the Seagate ST225N.
SCSI hard drives have the controller built into them, so no 'in
between' controller is needed.

SCSI uses a convention of ID number and Logical Unit Number (LUN). It
seems the ID number is always 0 for a setup with a single controller.
ie. the ID number identifies the controller number. I suppose you can
somehow daisy chain controllers. You'd have to daisy chain controllers
if you used two SCSI drives, which would have two separate controllers
(remember the SCSI has built in controllers).

The LUN is the physical drive number. You must set a jumper on the
drive itself to indicate which drive it is. 0, 1, 2, 3 etc.

So, drive 1 on the controller is ID 0, LUN 0. Drive 2, attached to the
same controller would be ID 0, LUN 1.

The MIO also can use SASI drives. I have no idea what these are.

Ok, now to my notes on specifics of setting up.

I. THE CABLES. POWER SUPPLY AND JUMPER SETTINGS:

Keep your cables short. No more than about one foot in length is
probably best. Any pc power supply can be used that has the 'standard'
four hole 'D' shaped power plugs. Newer power supplies may not have
the correct plug, or an adapter may be needed. The power requirements
of the controller and HDs should be carefully determined, and matching

power given to them.

There must always be a drive 0. If more than one drive is to be used, the termination resistor, somewhere on the hard drive itself, must be removed. Only the last drive MUST have this termination resistor and no other drives can have it, as I understand. There are no termination resistors on the cables themselves (the MIO documentation seems to indicate there should be.) Sometimes the termination resistor isn't where you can get at it, it is inside the drive someplace. Possibly a drive like this would have to be the last drive.

Set the jumper which selects the drive number. The first one for drive one. These jumpers can often be identified by searching for drive information from the drive manufacturer on the www (eg. www.seagate.com).

A fifty pin ribbon cable connects to the MIO. The red 'line' on the cable is wire #1 and goes to pin 1. Pin one is at the top back of the MIO. It is possible to put this ribbon on backwards. With the pin type headers, great care and patience should be taken to line up the holes and pins and gently push the cable connector on the pins. Removing the connector should be done slowly, probably prying with a small screw driver, first one side then the other. It is VERY easy to bend and break the head pins, great care must be taken installing and removing the cables.

For MFM and RLL drives, there is a 34 pin and a 20 pin ribbon cable to the drives, coming from the adapter. The 34 pin can be daisy chained. Each drive gets a separate 20 pin ribbon. The J0 on the 4000A is for drive 1 and J1 is for drive 2. Be sure the 20 pin connections and the jumper settings on the HD match. And be certain of the pin 1s on your connections. More than one connection can be done backwards. The slot connectors with a notch are nice because you can't put them on backwards.

II. WITH CONNECTIONS MADE, YOU ARE READY TO POWER UP:

The sequence is first hds, then MIO and finally computer.
The hard drive lights should blink a few times and the controller light should blink a few times, then all hd and controller lights should go out (if they don't, something is wrong with your setup or hardware). With lights out on the hd and controller, turn on the MIO.

Finally turn on the computer. Hold SELECT and hit RESET to enter the MIO menu. Select 'T' for drive type, and hit 'N' to select the number of the drive you want the hd partition to be. The MIO menu determines a hd partition. A partition cannot be larger than 16 megs. You can partition a single hd to be more than one 'Drive #' in order to use more of the hard drive over 16 megs.

I'm only going to describe a single hard drive setup. If you understand this, you can add another one.

Say the hard drive is a 20 meg. You want a 16 meg partition and a 4 meg partition. You select, say, drive # 3 to be a Hard drive. I forget when you hit SPACE and when you hit ENTER, but you go thru the interface, ID, LUN, Cylinders (Drive size is automatically computed), Heads, Start Sector and End+1 sector. For a 16 meg partition, the start sector should be 1 and the End+1 sector 65536. The number of cylinders and heads you have to know from the hard drive manufacturer. Often, this is printed on the hd. For a second partition on the same physical hd, you would start with sector 65536 and end with the about 81180 (for 20 meg drive).

Ok, you can't save the configuration yet, the hd hasn't been low level formatted. For this use the hdfmtph6.com on the MIO disk you got. I had best, actually only, success with hdfmtph6. Other hds may do better with one of the other hdfmtphX, but hdfmtph6 worked best for me. You will be asked the ID, LUN you want to format. 0, 0 for the first partition. Then you'll be asked what type of controller you have. Finally you'll be asked 'buffered' or 'unbuffered'. You might get a hint from hard drive tech specs on this, but 'Buffered' worked best for me for a ST225 and Olivetti XM 5220/2.

The behavior of hdfmtph6 isn't very friendly, it doesn't let you know if it is hung or what is going on. Normally you begin the low level format and the hd light comes on for some time. Then the screen shows verifying blocks and the # of blocks to verify. If an error occurs, the whole process starts over. If lots and lots of errors occur, there is probably something wrong with your setup. Also, if the initial stage, before the verify, takes longer than, say, five minutes, something is wrong. I waited an hour once, I think. Everything could burn up, or something, the program just keeps going, saying nothing.

A successful completion of hdfmtph6 will tell you success and tell you also the number of sectors on the hd. Write this down, as it is the last sector you can use for partitioning in the MIO menu.

Finally, you go into the MIO menu, save the configuration and then run hdfmtdir.com to put the Atari Directory structure on the hd.
All above is with SpartaDOS. MyDOS may have some differences, and, actually I suggest using MyDOS with the Black Box and SpartaDOS with the MIO.

Copy DOS (say x32d.dos) to the hd, type 'boot x32d.dos' and now you can boot from the hd. The MIO configuration will load from the hd when you do a power up sequence. Other than the first time, you can leave the MIO on all the time. Just be sure the hd is up to speed and finished initializing before turning on the computer.

I believe those are cartridge binaries converted to file.

Hi,

XEX files are recognized by several emulators and associated thru the
Windows PC file system and will 'Load and Run'. Opening the XEX file will
start the emulator with the selected XEX file if associated to the
emulator.. XEX files can be any Binary file recognized by the Atari 8-bit,
utility,game,application. XEX files can be renamed to COM,OBJ, etc.. and
used by Atari 8bit equipment from disk, or other.

They probably don't work because the MyIDE drive doesn't have any
standard partition table. The info on how the configuration data and
everything else is layed out on the drive should be at mr-atari.com

Since you are using lynx, I assume you are using a Unix shell account via dialup. If the operator of the Unix system has not removed or restricted access, you can download files using the following:

1) Use lynx or w3m to download the desired files to your Unix working folder. If you know the exact URL of the file you want to retrieve, you can use wget instead.

2) Once the file(s) are in your working folder on your Unix account, you can download them to your Atari by using "sx" to send the file to your Atari via XMODEM. (This is a variation of the "sz" send zmodem command).

Consult the man pages "man w3m", "man sz", etc for the exact syntax on these commands.

Good luck.

It's not in any "format" in that sense of the word (like FAT32, NTFS,
etc....) Mr. Atari's OS is just writing "RAW" data to the drive, and only
256 bytes of the 512 bytes available per sector. I think that ghost should
be able to back it up using a raw sector image of the drive (but never
tried that, although I've used ghost for years.)

Hmmm... I should try it just for fun.

If FDISK.BAS won't work, then I'd say your drive is either incompatible
with the MyIDE hardware, or has some bad sectors in vital areas (vital to
MyIDE that is.)

Try another drive and see what happens.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

Well, the FDISK.BAS does what it should, but it seems to loose the
information later. I have managed to set up partitions and boot MyDOS from
them, but I can't create the image space. Then it all turns bad.

Thanks, so they're just standard binary files with run addresses and all.
That's good to know! Thanks again and take Atarian care

2813. 80 or 40 columns most popular?

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-06 17:14:05 UTC
From: "Ronald J. Hall" <dark_lord@charter.net>
Message-ID: <pan.2005.07.06.17.14.04.940545@charter.net>
Source record: 10670

I was just wanting to take an informal survey and find out if most 8bitters access the Internet at 80 or 40 columns. I just assumed that most of you who are expert enough to do so would have upgraded to an 80 column setup as well. But you know what they say about assuming... :-)

The reason I'm asking is, currently, I don't really have 40 column support on my BBS. Its available as an option where you edit your parameters, but most menus are at 80 columns.

I'm trying to determine whether or not there is a need for the 40 column support. I mean, if 8 out 10 8bit users on the 'Net are at 80 columns, I'm probably not going to fool with it. Of course, if 8 out of 10 are at 40 then its something I'll have to look at.

Thanks for the input gang! :-)

2814. curses port for 8-bit?

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-06 17:32:56 UTC
From: Slor <slor@comcast.net>
Message-ID: <Xns968B7F515D1E9emuslor@216.196.97.136>
Source record: 10671

I was looking at a potential project today, and it got me to wondering whether anyone had ever ported the curses (text mode screen handling) library to the Atari 8-bit platform. It would seem to be reasonably straightforward to at least implement a subset of the functionality, but then again I haven't tried it. :) At any rate, I don't want to reinvent the wheel if it has already been done and is available somewhere.

thanks

Message-ID: <dahh09$9le$1@korweta.task.gda.pl>
Source record: 10672

Atari binary files are quite often stored on our hard disks among other binary files (MS Windows, UNIX, etc.). Atari binary files like .OBJ, .COM. .EXE should be renamed to .XEX in order to avoid confusion with common binary files used with MS Windows and others OSes.

That's weird. Setting up image space doesn't really do much, besides
setting one byte in sector 1, head 0, cylinder 0.

Would anybody here be interested in an NNTP server that just had the Atari newsgroups on it?

I was thinking about setting up my own NNTP server to host the newsgroups that I read most frequently. The reson for this is two fold. Firstly, posts on my ISP's NNTP server don't have a very long lifespan. They seem to get deleted quite regularly. Secondly, I'm wanting to create an archive of newsgroup discussions but still preserve the newsgroup structure.

Good idea or bad idea? Would I just be wasting valuable drive space? Would anybody here be interested in such a server?

Think I found the problem. Both my stock 130XE PAL machines act up, while my 800XL does it fine. Now my only problem is remembering what images are on which slot. Sigh, getting old ;-)

WOW, Real Multitasking!!! I thought the CoCo and one rarely heard of alternative OS for the Apple //gs were the only ones with that!

Will snapshot work with an Atari DOS menu, G.O.E. or something similar, or does it have it's own menu?

How much RAM and how many tasks will it work with?

How do you upgrade the RAM on a 130XE anyway?

Only a few Atari programs really support 80 columns. If you want
people to actually call with thier 8-bit Atari, 40 columns is a must. :)
ATASCII support, even better. :)

Well, DarkForce is down right now anyways, but it looks like the trend is going to be for supporting 40 columns.

Guess I've got some redesigning work to do once we get back online. :-)

PS BTW, whats ATASCI? I mean, I know what basic ASCII is, is that just the Atari 8bit version of it? Thanks.

Dark Force? 'May the force be with you.' There's dark energy and dark
matter,
now dark force, instead of E=MC^2, or F=MA, we have DF=DM*DA.

ATASCII is the Atari 8-bit char set, same as ASCII for alphabet and numbers
and the usual characters 32 to 126, but also has useful graphics characters
for
ATASCII graphics, rather than the ASCII 128 to 255 and 0 to 31.

The full text of Compute II magazine is now available at The Classic Computer Magazine Archive. (http://www.atarimagzaines.com)

Compute II, subtitled "The Single-Board Compute", was a sort-lived spin-off from Compute! magazine that only published two issues in 1980. It focused on KIM, AIM, SYM, and OSI single-board computers. Articles in the archive include "Designing an IEEE-488 Receiver with the SYM" and reviews of expansion kits for early single-board computers, including a Speak & Spell interface for the SYM. A complete list of the Compute II articles is available at http://www.atarimagazines.com/computeii/index/ .

Launched in 1996, the Classic Computer Magazine Archive serves up 6,000 articles from early personal computer magazines including Compute, Creative Computing, Antic, STart, Hi-Res, and Tandy Whiz Kids comic books.

Okay, thanks for the explanation. Now...how is it used? With ANSI or VT52
you use codes to display what you want. If someone can point me to a list
or send it to me, I can start working on stuff.

Also, any 8bit telnet BBSs using it right now so I can see examples?

Thanks again.

Yep, I remember now, that's what should be on mine as well.

Will check to make sure ASAP.

Hmmm...Don't think I have that MIO modem fix. Will have to get that.

I know that that the MIO doesn't support FlowControl. I always turned
this
off of any modem I used with it. Is this a Fix for the Flow Contol?

I never had a problem a 19200 Baud as long as I turned off the
FlowControl
I use to use a ZOOM 14.4 Fax modem on mine. Worked very well.

Will check out this program.

Thanks for info.

2834. Re: HDFMTPH versions for Atari 8-bit hard drives

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-08 02:14:12 UTC
From: Phantom <phantomm@bellsouth.net>
Message-ID: <Kilze.49876$Tt.31865@bignews3.bellsouth.net>
Source record: 10691

Hey,

Not sure if this will help ya.

But do you have the SpartaDOS ToolKit?

If so, there are two programs that might help with the bad sectors.
CLEANUP and DISKRX. I know that one of these if not both will go thru
your hard drive and allow you to mark Bad Sectors so that they don't get
used.

It does seem that alot of older harddrives will have some BadSectors.
Modern Software markes them as bad automatically IIRC. so that you don;t
run into trouble with them after you start filling the drive with
software.

Now CLEANUP and DISKRX does this. Even if you have software already on
the drive. I have used these in the past on my hard drives to mark bad
sectors.

One problem is that if you already have alot of software on the drive
and mark
the bad sectors. They can screwup a few programs or directories so you
might
want to back up your software before you do this on a fairly full hard
drive.

On a new hard drive, Marking the bad sectors to not use is what ya need
to do
to prevent problems. Unless you have tons of them. If thats the case
then something
isn't right. The drive is very bad or not formatted correctly.

This is correct to the best of my knowledge.
Please correct me if I am wrong.

I aggree with you here. 40 columns looks best on the 8-bit. I have seen 80 columns and it looks ok, but the test look somewhat fuzzy. Now if we can clear up the fuzziness, then by all means 80 columns would be the thing to have.

Source record: 10697

We're trying something new that will hopefully mean we can make more
great material available much more quickly: user contributions with a
specific goal in mind.

Here's how it works: You can make a contribution with PayPal for a
specific project at AtariArchives. If the target amount is reached,
we'll be able to outsource the OCR/HTML work to get material online
quickly. If not, you get your contribution back in full.

Our first user-supported project: Of the 30+ books available at
AtariArchives.org, one of the most popular is Computer Animation Primer
by David Fox and Mitchell Waite. However, that book is currently
available only with full-page images. If successful, this fundraiser
will allow us to make the full text available. This would be much more
useful, searchable, and easier to read. Users will be able to copy and
paste excerpts for reports, etc.

Want to make it happen? Contribute $8 or more at
https://www.fundable.org/groupactions/computeranimationprimer

Thanks
Kevin

I would not mind doing so,

but have a problem. my 8-bit monitor went down on me.

I have ordered another and when it arrives I will be back in business
and
will make ya a ATR or something asap.
phantomm@bellsouth.net

I also have a collection of MIO utilities and a collection of
SpartaDos Utilities, Disks full of them, that I may put into some type
of
package for a small copying fee if anyone is interested.

The Indus disk drives used a Z80 processor; supposedly they could be
upgraded to 64K RAM and could run CP/M.

If you aren't too particular OSS came out with something like OS/A. It's
been a long time since I used it. I remember it as similar to Apple and
CP/M with a command line interface. Not too unlike what Sparta DOS was
years later.

To donate money, people first have to earn it by selling their labour and paying tax (about 20% in my case). The outsourced people may also have to pay tax.

Why not ask people to contribute their labour directly, by doing some OCR themselves?

They do not have to do the whole book or even a chapter, just a few pages each when they have the odd moment free.

Even rough OCR would do, since the proof reading can be done by netizens reporting errors.

HTML is best done by a single person, to ensure consistent style over pages.

Many hands make light work.

I empathise with people who convert whole documents - I did the Atari chipset data sheets and hardware guide! I'd like to see "Programming the 6502" by Zaks, but I've already done bits of "Programming the Z80" by Leventhal and I think I bit off more than I can chew!
http://homepage.ntlworld.com/kryten_droid/z80_assembly/z80_assembly.htm
However, even partial conversions are useful, as HTML frames around images - e.g.
http://homepage.ntlworld.com/kryten_droid/Atari/ST/spg/st_prog_guide.htm
Anybody want to help with these, they would be very welcome!

2846. Re: First AtariArchives user-supported project

BTW, $240 for 500 pages is a lot less than I thought.

Who is doing the work for that kind of money?

Will you outsource it to India/China/etc?

I have, and they do. For nine years, a small core of volunteers have made AtariMagazines.com and AtariArchives.org the resources they are today. They've scanned, OCRed, and HTMLized thousands of articles and dozens of books. They've been amazing. Many other people want to help but don't have the time. This is another way they can do so.

> They do not have to do the whole book or even a chapter, just a few pages
> each when they have the odd moment free.

Possibly. But doing projects in that way often takes months or years to get them online. Outsoursing gets them up in weeks.

> Even rough OCR would do, since the proof reading can be done by netizens
> reporting errors.

That's not good enough. I don't like to put material online until it's right, for a number of reasons.

> Many hands make light work.

It can, but in my experience many hands can lead to the work not getting done at all. I can't count the number of times someone has volunteered to work on a book or magazine, then after a year or two admits that they just don't have the time to finish it. This project -- Computer Animation Primer -- is a 500-page book, quite an undertaking. I'm afraid it wouldn't get done without paying for the work.

One other thing: AtariArchives and AtariMagazines has permission for a whole lot of material that we just haven't had the manpower to get online. We don't have enough vonunteers to catch up and get all this great material online in a timely fashion.

> BTW, $240 for 500 pages is a lot less than I thought.

> Will you outsource it to India/China/etc?

I use a firm in India.

No really what I need is a Magnavox Professional RGB Monitor, Phillips made a similar one.

These are RGB monitors about 13 to 14 inches. They have a long door on the bottom of the
monitor. Inside the door is a Green Button, A CVBS/RGB button, Color, Sharpness, Contrast
and etc.

On the back of the monitor are some ports, usually a TTL RGB, a Lin RGB, a Audio RCA input, a
Video Input and a square VCR Button.

These can be used with an Atari ST-Falcon and also a Atari 8-bit. ALso a Commodore 64.

The power button is on the bottom front and is usually square with a green Led. Sometimes it
will have 80 on it or something similar.

I remembered that one of the Micro Mainframe drives could run CP/M.
Whether that required an optional upgrade I don't know.

According to the 8-bit FAQ (http://www.faqs.org/faqs/atari-8-bit/faq/)
there was also L.E. Systems LEDS5-01 which with the called the "RAM
Charger" upgrade could run CP/M.

I was surprised to hear that the Indus GT could also be upgraded to run
CP/M. Always liked that drive.

Well not to take anything away from the chat server, it's great!

However, I have a 16line telnet BBS you can all check out at:

hodgepodge.dtdns.net

It features multi-user chat, and a ton of online games including rpg,
trivia, and whatnot.

Call with ansi if you can.

Thomas

2866. Atari Chat Server

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-11 21:55:41 UTC
From: You <you@cogeco.ca>
Message-ID: <BEF8631C.33A1%you@cogeco.ca>
Source record: 10623

The Atari Chat Server will be back online at 7:00pm Eastern time (6:00 central time).

The new IP address is: 24.57.165.180 port 23

The URL remains the same: utoc.dyndns.org

The Chat Server software will be updated this weekend to include color and ANSI support. In addition, the new server will allow users to create private chat areas that are accessable by invitation only. Many new features coming soon.

I tried it, but get an error in Windoze, does one need to use a
special password to get in.

BTW, Any 8-bit sites that uses passwords would be helpful.

E-mail them to me and I won;t pass em along.

Atari (NASDAQ:ATAR) announced yesterday that it has signed a licensing agreement with Activision (NASDAQ:ATVI) to include two of their classic video game hits, Pitfall!(R) and River Raid(R) in Atari's forthcoming Atari(R) Flashback 2. The Atari Flashback 2 game line-up includes more than 40 games spanning a variety of 8-bit genres. Developed by Atari, the Atari Flashback 2 is scheduled to ship in August for under $30 at retailers nationwide. ATVI also recently released a video game based on Marvel Enterprises comic book characters the Fantastic Four.

Come Play the Atari Flashback 2.0 at our Booth at VGS- Sunday 26 June, 2005 Viewed:61

Atari Video Club/Jaguar Community United is proud to announce that with help from Corey Koltz of 8-bit Classics (http://www.8bitclassics.com) and Curt Vendel of the Atari Museum http://www.atarimuseum.com/) that The Atari Flashback 2.0 game console will take it's first midwestern appearance at The 2005 Video Game Summit in July before it's inital release in August. This will be it's first public showing in full retail form. The Atari Flashback 2.0 made it's first southwestern appearence at the Okalohma Video Game Expo on June 18t(before that it was shown at the Electrontic Entertainment Expo back in May). The Atari Flashback 2.0 features 40 built in 2600 games all using actual 2600 technology (some games are classics but there are a few new homebrew games included). Plus the controllers are interchangable with classic Atari controllers. Stop by the 8-bit classics table at VGS'05 to check out The Atari Flashback 2.0 and flashback to the 70's when you got your first 2600.

The 2005 Video Game Summit will be on July 16th,2005 from 9am to 6pm Fairfield inn and Suites (Heron point building), 645 West North Ave, Lombard, IL 60148.

Join the Video Game Summit mailing list for updates on the event (VideoGameSummit-Subscribe@yahoogroups.com) Visit the VGS website: http://avc.atari-users.net/Events/FestVGS.html

For more information about Video Game Summit contact Daniel Iacovelli at AtariVideoClub@yahoo.com.

2875. Atari Chat Server has been updated!

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-15 22:15:33 UTC
From: You <you@cogeco.ca>
Message-ID: <BEFDADC5.3494%you@cogeco.ca>
Source record: 10632

The Atari Chat Server has been updated.

We're running new software and the power and flexibility now available are phenomenal. The new Atari Chat Server allows private inter-node chat among users, group chat between groups of users, private chatrooms, the ability to send simple private messages between users, and many more features soon to be implemented.

In the very near future, the Atari newsgroups will be available on the Atari Chat Server as well. I am currently looking into the possibility of providing email accounts to users as well.

Come check out the new system!

The Atari Chat Server Support Site Is Available Here:
http://utoc.dyndns.org

The Atari Chat Server is available via Telnet at: 24.57.165.180 port 23

URL: utoc.dyndns.org

2876. Re: Visicalc for XEP80

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-16 00:57:18 UTC
From: Glenn <noemail@nospam.com>
Message-ID: <OXYBe.585$k_.530@trnddc07>
Source record: 10633

There's a sad story about the XEP-80 and the way Atari treated the engineers who designed it and their backlash on the company - I think it's the reason why only the joystick version was released. From what I vaguely recall, there was a parallel port version designed also.

For most programs to make use of the XEP-80, it requires the replacement of the E: driver routine. Since most programs like Visicalc and SynCalc are self-booting software I think they need to be rewritten to get them to use a replacment driver and make use of a larger screen.

I don't know if the Austin-80 for the 800 was able to make Visicalc and other programs work for it.

Someone please correct me if I got something incorrect or can add further details.

Glenn

Does anyone out there have an Atari 8-bit computer to PC compatible cable called the Xformer that they wanna sell? OR does anyone have a schematic diagram on how to make one?

Either will do, but i would rather have one that's already built.

please let me know!

Thanx!

Rick

The support website for the Atari Chat Server has undergone a major facelift. The Atari logo is now featured prominently at the top of the page. The style and layout has pretty much been finalized and content is being added as I type this.

Another great Atari resource has taken its place on the World Wide Web.

Check it out today. http://utoc.dyndns.org

I get the same errors. I guess he's still new to building web pages.

His code while rock solid was a little hard for me to decifer back in
his ANALOG days. I remember thinking I would burn TEDIT into a cart but
wanted to eliminate the 2 space left margin. I looked at that source
code for a week w/o being able to figure it out.

Hi everyone!

I'm looking for two broken Atari 1050s. I just want the enclosure
shells not the mechanisms, and the shells should be in decent shape.

I do not need power supplies or anything, they are for a project of
mine.

Intriguing.

I have toyed with the idea of using a 1050 shell to mount a removable hard disk drive bay and caddy for my 160MB HDD. It originally came with an extruded aluminium case that looked nice but had no fan, thus it overheated unless just used for occasional backups.

A 1050 case has got room for a full 5.25" drive-bay and cooling fans!

Pictures of the show I took. It was a small show, but I thought it
was pretty good. It was nice in that I could actually walk around and
talk/look. Met some people/made some sales. Ate some food. Gave
away a refurbed NES, gift certificate for my site ($10), and AtariMax
donated a 1MB MaxFlash cart.

And now you easily play emulators on the PSP with the KXploit tool. I have a NES emulator (NesterJ) on my PSP (has the 1.50 BIOS) with a sh**load of games, including some Famicom Disk System games (you need to have the Famicom Disk System BIOS, and it has to be named disksys.rom).

Now if someone would just develop an Atari 2600 emulator for the PSP (or a combo 2600/7800 emulator for the PSP).

I tried to learn some about this. There is an
article in the first issue of Antic about what
I think you're talking about called 'Multi-tasking
in Forth" by Bob Gonsalves. The article describes a version of Forth that
allows making
VBI routines that can be used with other languages. As far as I can
determine, it envolves a disk of fig Forth that contains the
routines, a disk from Pink Noise Studios (pns).
I haven't been able to find this Forth boot disk.
I found 5 fig Forth disks, but none of them contain the VBI creating
routine.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

Interesting, that's the exact same location as SWRAP2003!
(www.swrapexpo.org) Just coincidence, or are there some common organizers?

I heard that SWRAP2005 might be moved back there, have they decided?

2901. HLA Adventure on the Atari and Apple 2...just converted to the C64!

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-19 15:56:35 UTC
From: dunric@yahoo.com

Not sure if this opens the door to an 8-bit Apple II and Atari 800
version of HLA Adventure, but...

HLA ADVENTURE for the Commodore 64
Ported from the .Z5 version by Paul Panks and Roger Pepitone

It took me awhile to figure out how to do this, but I think the game
now works on the Commodore 64/128!

Run the first disk side FIRST, then it will prompt the user to insert
the second disk. Do so and follow the game prompt. Type 'help' at the
command prompt for a list of game commands.

This was ported directly from the .Z5 version of the Windows and Linux
versions of HLA Adventure. It doesn't quite display elegantly in
40-column mode, but it doesn't look bad, either.

The game data file is very large -- in fact, if you're running this in
VICE, be sure that TRUE DRIVE EMULATION is turned OFF after you load
the game (make sure it is turned ON while the game loads the first two
disk sides, then turn it OFF when game play begins...otherwise gameplay
is unbearably slow).

As for how to optimize this game so it plays faster...well...I'm not
entirely sure yet. You might try compiling it somehow and making it run
faster that way, because it is intepreted from the game data file on
both sides of HLAADV.D64 and HLAADV2.D64.

If playing on a REAL Commodore 64 computer, have lots of patience while
the game determines what command you entered and then wait as it
displays the current room. Sometimes it took up to 45 seconds for this
to happen for command (an almost unbearable wait). But hey...a game
that shouldn't fit into a Commodore 64 now does, so I guess there's
some sacrifices to be made. :) Speed being one of them.

If you have any suggestions on improving this game, please write to me
at:

dunric@yahoo.com

The website for the original HLA Adventure game is located at:

http://members.tripod.com/~panks/hlaadv.html

Alternatively, you can grab a copy of HLA Adventure for the Commodore
64 at my main adventure games page:

http://www.geocities.com/dunric/pauladv.html

2907. Good source for ASM source code?

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-20 23:11:16 UTC
From: Slor <slor@comcast.net>
Message-ID: <Xns9699B906C9278emuslor@216.196.97.136>
Source record: 10564

I may have asked this before, so feel free to chastise me if I have, but...

In my "on again, off again" quest to get back more into the 8-bit scene, I'm working to learn 6502 assembly a bit better, and my end goal is to put together a game that can run on stock 130XE hardware and perhaps go as far as putting out some homebrew carts (thanks for the burning pointers a while back). I haven't decided yet whether I want to do a port from another platform or work on an original idea.

What I'd like to know is if there is a good source for assembly (can be geared for Assembler Editor or MAC/65 - either way) source code for a reasonably basic game or outline of a game. I feel like I'm getting a good grasp of the initial concepts, but I know there are a lot of tricks and recommended practices that I am less than in tune with, so it would be great to have at least one nice sample to work with that does a good job with screen handling, speed, memory usage, etc.

Could be I already have something among all the 8-bit archives I've grabbed and don't even know it, so if I might find something in the Pooldisk or any other generally accessible collections, just assume that I could tripped over it and not noticed. :)

Any pointers will be greatly appreciated!

thanks

ANALOG published source code for all their
ML games, so the magazine would be good.
If you don't have the magazines, then you could
go to the cyberroach site and maybe download
some articles and code.
There may be some good books for Assembler
at the Kevin Savitz archive site. (there are
a number of them, http://www.atariarchives.org

The 'Mapping the Atari' is essential. I find the
table of all documented operators (LDA, STA, TXA, RTI, about 50 of them,
found in Inman's

'The Atari Assembler' a very useful item.
I have some text files that can be good intros.
De Re Atari has a lot of useful info, like especially
the IOCBs, how to set them up and use them.
Someone was asking about VBIs, I found some
info at the URL I mentioned.
I started with Poole and McNiff's 'Your Atari
Computer' and really never graduated from
BASIC, but can use USR calls from BASIC.
For a beginner, BASIC, or maybe ACTION!
can enable to accomplish something easily
that would be difficult in assembler. I never
graduated to MAC 65, or today the cross
assembler for PCs that let you develop on
a PC (I forget the name). I would guess most
Mac65 programmers have a fairly large bunch
of macros to use, just set up the parameters
and call the macro, return after accomplishing
what you wanted.

Thanks Russ. I have ATR images for '85 to '88 ANALOG disks in the Pooldisk
collection, so I will start looking there. I'm not surprised there is
likely some good source hiding in all the stuff on my computer.

> There may be some good books for Assembler

I'm pretty good bookwise - I grabbed a lot the recommended reading
(including the ones you referenced) a while back and have worked my way
through some of it. My biggest issue is having the time to code enough to
not forget everything I learn. :)

One of the most impressive (at least to me) books explaining game design and programming on the Atari is "Atari Graphics And Arcade Game Design" . Starts off with Basic USR calls and moves thru all aspects of the Atari feature set as it moves more and more toward straight Assembly code for gaming.

The Assembly code is for the F-S Macro Assembler (compatible w/ SynAssembler). But, if you are up on the basics for either Editor Assembler or MAC/65, you can easily make the minor code/syntax changes.

The book is available (as RussG mentions) on Kevin's site:

http://www.atariarchives.org/agagd/

Hi all,

The 130xe had the following mods built in:

PS/1 4" LCD screen with built in speakers
Internal MyIDE by Mr Atari
Compact Flash Adapter and 128mb CF card
32 in 1 OS by AtariMax

The LCD folds forward for storage and transport. The machine can boot
from the CF with the 32n1. Its pretty cool to see the machine boot
without a disk drive :)

I'm thinking of making a battery pack, but I'm thinking that the
battery life will pretty short. But it would be worth to see it work
with a battery pack.

I would like to make more of these, but LCD PS/1 screens a little
pricey to make a lot of them... Cost about $200 for the parts alone
not including the battery pack or the 130xe. I really just want to see
if it could be done.

Rory

I have the source code for my demos on : http://games.nmi.no/atari/a8dl.htm
if that helps! They only run on PAL Ataris and neither emulator or NTSC will
do. But the source is there anyways. And I also wrote a very simple
introduction on Megamagazine (don't remember the number they were on),
called Making of a demo or something.

Good luck and please feel free to ask, I will do my best to help!

Take Atarian care

2913. ABBUC contests 2005...

Newsgroup: comp.sys.atari.8bit

Source record: 10570

Hello folks,
this is just a small reminder that the ABBUC software and hardware
contests will end by the 31 August 2005. If you still have any
contributions, get in contact with the software-ressort of abbuc
(softwareatabbuc.de) or the hardware-ressort of abbuc
(hardwareatabbuc.de) respectively...

For those, who have never heard of these contests, the rules and the
available prizes can be found with this link:

http://www.atari-portal.net/modules.php?name=DocTree&dtIsBlk=y&dtId=184

just click on the interested subject and then choose your language
(english, german, polish, czech and spanish are available). Well, hope
to hear from you soon... greetings from ABBUC, Andreas Magenheimer.

Source record: 10573

On Sun, 10 Jul 2005 at 16:20 -0700, stephen sheppard scribbled:
->According to the 8-bit FAQ ... there was also L.E. Systems LEDS5-
->01 which with ... the "RAM Charger" upgrade could run CP/M.
->I was surprised to hear that the Indus GT could also be upgraded
->to run CP/M.

On February 10, 1987, Future Systems Inc. sent a letter to 40,000 people who had bought Indus disk drives for Atari or Commodore computers, announcing that they had acquired manufacturing and marketing rights for the Indus. Ram Charger was the name for their 64K CP/M module for the Indus drive, also announced in that letter.

Apparently the L.E. drive also used the Future Systems CP/M board. As I mentioned in another posting, I have an Indus drive with the CP/M board installed so I can attest that it works.

2917. Midwest Computer Festival to be July 30

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-21 17:05:38 UTC
From: Sid Pacman <8-bitter@6502.chip.old.folks.home>
Message-ID: <Pine.GSO.4.61.0507211254420.974@furyy1>
Source record: 10574

The following announcement is excerpted from the Vintage Computer Festival (VCF) Gazette, Volume 3 Issue 1, published May 12, 2005:

VCF Midwest "Lite"

The VCF is introducing the new concept of the VCF "Lite" event. VCF Lite events feature all of the elements of a traditional VCF event (including speakers, exhibitors and vendors) but the event is held on a single day instead of across two days.

VCF Midwest 1.0 will be held on Saturday, July 30th at Purdue University in West Lafayette, Indiana. Doors will open at 9:30am, with speakers beginning at 10:00am and exhibits starting at 12:00pm. The event ends at 5:00pm. Admission is $5 per person.

Exhibitors and vendors are wanted, so if you want to show off part of your collection or want to sell some of it, register now at the VCF Midwest website at:

http://www.vintage.org/2005/midwest/

Additional VCF Midwest 1.0 information will be posted to the VCF Midwest website in the coming weeks, so get yourself onto the VCF mailing list to be informed of updates as they are announced. You can add yourself to the VCF mailing list here:

http://www.vintage.org/maillist.php

A separate announcement for VCF Midwest 1.0 with more information about the event will be distributed in the coming days so be on the look-out for that.

If you'd like to organize a VCF Lite in your area, please contact Sellam Ismail at <sellam@vintage.org>.

Best regards,

Sellam Ismail
Producer
Vintage Computer Festival
http://www.vintage.org/

This issue of the VCF Gazette can be found online at:

FlightSimBooks.com is a new site that features the full text of eleven classic flight simulation books.

http://www.FlightSimBooks.com

More than 2,200 printed pages have been digitized into 800+ web pages. The titles available are:

- Jet Fighter School and Jet Fighter School II by Richard G. Sheffield

- Flying on Instruments with Flight Simulator by Jonathan M. Stern

- Learning to Fly with Flight Simulator and Realistic Commercial Flying with Flight Simulator by John Rafferty

- 40 Great Flight Simulator Adventures, 40 More Great Flight Simulator Adventures, Flight Simulator Co-Pilot, Flying Flight Simulator, Runway USA, and A Flight Simulator Odyssey by Charles Gulick

These books, published from 1985-1989, cover Microsoft Flight Simulator and Sublogic Flight Simulator software, plus other flight sim programs including F-15 Strike Eagle and Sublogic's Jet. Users who prefer more modern flight simulators will find that many of the techniques and situations described in these books, such as aerobatic maneuvers and instrument flying techniques, remain relevant to newer flight simulators.

All of the books are available with the gracious permission of their authors.

FlightSimBooks.com was created by Kevin Savetz with help from volunteers. His other classic computing sites include AtariArchives.org, which offers the full text of 30 classic computing books; and Classic Computer Magazine Archive (www.atarimagazines.com), which offers full text of Compute!, Creative Computing, Antic, and other early computer magazines.

Enjoy!
Kevin

Please contact me in e-mail (see below). Incidentally, I didn't mention that the extra board made the Indus run hot. In order to use the drive with the CP/M board installed for any length of time it required extra efforts to cool it down. For that reason I'd recommend to anybody thinking about installing that board that they do it in a drive that's extra, not in their main drive if they have only one.

Then there's the question of how many people are running actual Atari 8-bit floppy disk drives nowadays? I am, but I'll have to admit I haven't turned my Atari system on for several months.

> Thanks Vidar. Now I have something to do this weekend. :)

Don't hesitate to ask. I am looking for graphics artists myself, but seem unable to find any. I am about to complete my Atari Box World game and start to code Atari Mummy Maze. Need someone to draw me some cool graphics.

What's your plan? Demo? Game? Utils?

Have a nice Atarian weekend!

2930. New book about the Battle between Commodore and Atari

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-23 01:57:32 UTC
From: Variant Press <variant@commodorebook.com>
Message-ID: <ouhEe.8632$mN.100341@news1.mts.net>
Source record: 10587

Find out more about the battle between Atari and Commodore in a new book, "The Spectacular Rise and Fall of Commodore". Learn how former Atari 2600/Atari 800 engineer Jay Miner developed the Amiga computer, and how Atari almost purchased Amiga. Find out how the Atari ST was partially designed by Commodore engineers while they were still at Commodore. Atari founder Nolan Bushnell even joined with Commodore to launch the Commodore CDTV, a precursor to the modern DVD player.

The Spectacular Rise and Fall of Commodore is a detailed history of the company behind the best selling computer system of all time, the Commodore 64. This book was almost two years in the making, using over 44 hours of interviews with Commodore engineers and managers.

Title: The Spectacular Rise and Fall of Commodore: The Inside Story
Pages: 624
Size: 6 x 9 inches
ISBN 0-9738649-0-7
August 2005

I took a look at your demo articles - good intro to some basics. I'll
check out what's on your site next. Thanks for the pointers.

>

Most likely a game. Something simple to begin, then perhaps a port from
another platform.

Hello. I'm looking for a working copy of Spartaread, so you can read spartados disks on an ibm drive. I found a couple copies but cannot unarc them. If anyone can just send an attachment with the files unarc'd, i'd appreciate it!

Thanx!

Rick

Hello out there. I used to play Pac-Man in the arcade, like just about everyone this side of the planet Jupiter. I remember some of the patterns, and was wondering if there are any patterns anyone in this NG has developed for the 8-bit Pac-Man cartridge?

Please lemme know.

thanx!

Rick,

Outside of the arcade games, patterns just don't work. The arcade games had used an algorithm that controlled the ghosts behavior based on the position of Pacman in the maze. This obviously lead people to develop patterns of play that when used again and again enabled people to suceed in the game.

As the game was ported to other video game systems and computers, the programmers who wrote these translations developed their versions based on observations of the game and not actual game code. So you will find that even though the may look like Pacman, their underlying game code isn't Pacman but someone else's interpretation of Pacman. And because of this they don't play the same way.

Namco later on put randomness into Ms. Pacman to prevent the ability to develop patterns. Patterns encroached onto the ability of arcades from making more money on the games because people who were able to play longer tied up a machine from collecting more quarters.

Glenn

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

2942. Primary factors preventing emulation?

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-26 18:56:05 UTC
From: Slor <slor@comcast.net>
Message-ID: <Xns969F8DC15FDF8emuslor@216.196.97.136>
Source record: 10500

As I've been reading more and reviewing notes from previously asked questions, I'm trying to get a good feel any major issues that prevent some software from working properly with the current 8-bit emulators. For instance, I attempted to run a program from the Atari Graphics and Arcade Design book in an emu, and it crashed. I haven't tried it yet, but I'm sure it will run on the real machine. I have seen mention of other demos and games that spell out "this will not work in an emulator". So, does anyone happen to have a short list of the most common reasons? Are they related to incomplete emulation, failure to properly emulate cycle timings, etc.?

In my development, I intend to support the lowest common denominator as much as possible (likely dependent mostly on memory requirements), and I want to make sure I don't cross any boundaries of emulation unfriendliness as well.

thanks

My demos use too much of the VBI and DLI, so I guess it's timing problems mainly on demos. I still hope for an emulator that can run my demos, which seems like they're done by a drunk man on an emulator.

How is the coding going? Hope all is well on it's way!

Take Atarian care

If you find something that doesn't run on Atari++, I would be curious
to hear since that's something that requires fixing (of the emulator,
that is).

So long,
Thomas

That's like saying "The charm of Studebaker (or Hudson or MGB or DeSoto or whatever) is that all the support comes from users and not the corporation." Would Apple users be better off if the Apple company folded? Of course not. "Charm" is one thing, but it doesn't hold a candle to having the real company in business supporting the products.

->[I] was wondering if there are any patterns anyone in this NG
->has developed for the 8-bit Pac-Man cartridge?

Dunno about the 5200 version, but I can comment on the 8-bit com-
puter version. I never discovered any sure-fire patterns in the
same sense as the arcade game. The only thing you can do is apply
similar concepts, methods, and tricks based on general Pacman exper-
ience and knowledge.

The biggest difference is that the maze is longer horizontally in
the home computer version, whereas the arcade screen is (or was)
oriented vertically. On the home version you have to be more careful
in clearing the "danger zones" at the bottom of the maze because it
takes longer to reach a point to safely exit at. That gives the
ghosts a better chance of trapping you.

Also, in the arcade game it's easy to hover at one end of the
tunnel and lure all four ghosts in behind you; while they're slowed
down you zip out the other side. I found that this can't be done
anywhere as easily on the 8-bit computer version.

The 8-bit computer version of Ms. Pacman is much more true to
the dynamics of the arcade version.

Apple users wouldn't be better or worse off either way if Apple Corp folded,
however, Macintosh users might have a bad time of it if they did. The Apple
II
line was abandoned by Apple Corp in the mid 90's, and haven't been in any
way
supported except for a few pieces of crucial system software still on their
site
under the obsolete list. :o)

FamilyNet Newsgate

Interesting mention that in the new Charlie & The Chocolate Factory movie, the "Television Boy" who is into television and violent video gaming is shown to be playing on an Atari 2600 with a game that has PS3 graphics or something. :) But non-the-less it is a 2600 that they have there as his game system.

Hello,

I have many boxed ATARI 2600/7800 games, most of the new :

PAL Games : 1.50 Euros each

Astroblast (Telegames, PAL) www.vectrex.de/c/astroblast.jpg
Big Bird's Egg Catch (CCW, PAL) www.vectrex.de/c/bigbird.jpg
Cookie Monster Munch (CCW, PAL) www.vectrex.de/c/cookie.jpg
International Soccer (Telegames, PAL) www.vectrex.de/c/intsocc.jpg
Kung Fu Superkicks (Telegames,PAL) www.vectrex.de/c/superkic.jpg
Pick 'n' Pile (SALU, PAL) www.vectrex.de/c/pickpile.jpg
RealSports Tennis (ATARI,PAL) www.vectrex.de/c/rstennisp.jpg
Super Breakout (ATARI, PAL) www.vectrex.de/c/superb.jpg
Super Challenge Football (Telegames, PAL)
www.vectrex.de/c/football.jpg
World Championship Baseball (Telegames, PAL)
www.vectrex.de/c/wsbase.jpg

PAL Games : 2.50 Euros each

Bogey Blaster (Telegames, PAL) www.vectrex.de/c/bogey.jpg
Chess (PAL) www.vectrex.de/c/chess.jpg
Mission 3000 (BitCorp, PAL) www.vectrex.de/c/mission3000.jpg
My Golf (HES, PAL) www.vectrex.de/c/mygolf.jpg
Title Match Pro Wrestling(Absolute,PAL) www.vectrex.de/c/title.jpg
Tomcat (Absolute, PAL) www.vectrex.de/c/tomcat.jpg
Weltraum Tunnel (BitCorp, PAL) www.vectrex.de/c/wtunnel.jpg

NTSC Games : 1.50 Euros each :

RealSports Football (ATARI,NTSC) : www.vectrex.de/c/rsfootvc.jpg
RealSports Tennis (ATARI,NTSC) : www.vectrex.de/c/rstennis.jpg
RealSports Volleyball(ATARI,NTSC) : www.vectrex.de/c/rsvolley.jpg

NTSC Games : 2.50 Euros each :

Galaxian (ATARI, NTSC) : www.vectrex.de/c/galaxian.jpg
Pole Position (ATARI,NTSC) : www.vectrex.de/c/polepos.jpg
Jungle Hunt (ATARI,NTSC) : www.vectrex.de/c/jungle.jpg

ATARI 7800 PAL : 1.50 Euros each

Mat Mania Challenge (ATARI,PAL) : www.vectrex.de/c/mat.jpg
Sentinel (ATARI,PAL,Lightgun only) : www.vectrex.de/c/sentinel.jpg

ATARI 800 XL/XE NTSC (PAL compatible) cartridges 2,50 Euros each :

Ballblazer (ATARI) : www.vectrex.de/c/ballblaz.jpg
Crossbow (ATARI) : www.vectrex.de/c/crossbow.jpg
Hardball (ATARI) : www.vectrex.de/c/hardball.jpg
One on One (ATARI) : www.vectrex.de/c/oneonone.jpg
Pole Position (ATARI) : www.vectrex.de/c/polexl.jpg
Star Raiders 2 (ATARI) : www.vectrex.de/c/starrai2.jpg
Tennis (ATARI) : www.vectrex.de/c/tennisxl.jpg
Thunderfox (ATARI) : www.vectrex.de/c/tfox.jpg

Hardware :

4 Euros each (2 units in 1 box) :

CX-50 Keyboard Controllers (ATARI) : www.vectrex.de/a/keyctrl.jpg

2 Euros :

Sears Paddle/Joystick Combo : www.vectrex.de/a/paddle.jpg

Most of the games are boxed and new, sealed.There are huge qts. of these games available, usually 50 or more copies.

These games are great for resale or for homebrewers who need empty cartridge shells.

Telegames cartridges contain 4K or 8K EPROMs, this may be interesting for homebrewers.BitCorp games contain 4K EPROMs.

I can sell the games OR trade for ATARI 2600/7800, ATARI ST, ATARI 800 XL/XE, Commodore 64, AMIGA, NES, Gameboy, ATARI Lynx, Colecovision, SNES, Intellivision, MS DOS or other games.

I can ship worldwide and I accept paypal.

Shipping depends on the final weight, it's 12,90 Euros for up to 15 games, 32 Euros for up to 40 games and 62 Euros for up to 150 games. In Europe, shipping is 8,60 Euros for up to 16 games, 17 Euros for up to 40 games and 32 Euros for up to 150 games.

If you're interested, please write to my email-Address.

MG

Source record: 10510

There have been several threads in csa8 about using a single board computer as a dedicated APE/SIO2PC "server." Although there are lots of possible hardware systems for doing that, I've found a very useful and economical machine -- namely the Toshiba Libretto. There is a lot of information on the web about the U.S. Libretto 50/70/100/110 series.

The Libretto is a "palm top" computer that is about the size of a VCR tape. (Talk about compact!) A "stock" model 50CT uses an original Pentium processor running at 75 MHz. Since the 50CT is the oldest US-released Libretto, it is also the least expensive, but it runs APE for Windows 95/98 flawlessly under W95 SR2 in 16 MB. I am using a very early (registered) version of Win-APE, V1.1.0 with a 1-chip Max232-type interface. 3X transfers are no problem, and printing also works great. A "true" 14C89 interface also works well. Some of the APE "Options" boxes are slightly wider than the nominal 640 X 480 display, but the L50 has larger virtual displays, and nothing "crashes" when the box overhangs the display -- just "grab" and "slide" it. The main APE display fits nicely. Newer versions of the Libretto (100CT and 110CT) have a wider 800 X 480 display.

There have been a couple of mentions in csa8 about trying to use the Atari Portfolio with APE/SIO2PC for Dos. I started looking at this APE-server project when I ran across a Poqet computer on eBay; then found another MS-DOS candidate in the HP LX "palm-top" series. But the Libretto is a true Win Machine (also prized by Linux users), with a TFT color VGA display, and Pentium power. Easily runs W95 and also W98 SE (in 32 MB).

Since I got mine, I've moved many ATR's to it and used it quite a bit. And If anyone is interested in the L., I'll be happy to share what I've learned.

There are other differences in the character codes. Backspace, bell, cr+lf are one code, 155. Codes above 127 are mostly inverse video.
The Atari 8 version of Ansi is "Atascii". Using the cursor codes in the 0 to 31 range lets you put text where you want, almost. The only special text thing is inverse. The Welcome FAQ here may list the codes. Computes Mapping the Atari has them. I have a pretty 2 sided card I make that I can post if desired.

40 columns is usually best. Most people and term progs will use it. And keeping it 40X25 keeps the screen from scrolling or messing up.

Hi All,

Ok, I did it. I went and got batteries for the 130xe portable. I hooked up 3 batteries for RC cars and tested to see how long the batteries last... 2+ hours!!!. The batteries had not run out! I had to stop the machine to pack it for Saturday. I would not be suprised if it ran for 3-4 hours on a charge... WOW. I was expecting 45min-1hr MAX...

Julian & I will be at the VCF in West Layfayette, Indiana this Saturday and we'll be exhibiting a PDP/11, IBM RS, the Atari 130xe portable running on batteries, and my Rack mounted Falcon030 w/CT63. We will be in the exhibit booths. I can take orders for ethernecs and eiffel board there if needed. We will be taking pictures and posting them at a later date for those interested.

Rory

Hi Greg-
Which model HiNote? Presume this is the Compaq HiNote series?
Incidently, another petite sub-notebook that I considered was the
Compaq Aero, but evidently Compaq quit that series after releasing the
486-33 model.

Here's what's in the FAQ:

Subject: 7.2) What is the ATASCII character set?

ASCII is an acronym for the American Standard Code for Information
Interchange. Pronounced ask-ee, ASCII is a code for representing English
characters as numbers, with each letter assigned a number from 0 to 127. For
example, the ASCII code for uppercase M is 77. Most computers use ASCII codes
to represent text, which makes it possible to transfer data from one computer
to another.

The 8-bit Atari computers use a modified version of the ASCII character set
called Atari ASCII, or ATASCII.

David Moeser produced this nice translation table.
Piotr Fusik corrected the description of Atari character 5.

ASCII TRANSLATION TABLE -- IBM & ATARI 8-BIT (ATASCII)

Wow. Thanks Michael. Looks like I've got some experiementing to do, as
soon as I get some free time. :-)

Mine is a Digital HiNote Ultra CT450. Runs at 75 mhz. The batteries are expensive as hell to get, but I just leave the laptop plugged up, and simply put it to sleep by closing the screen when not using it.

As for the Aero... played with those. They have to be the most confused computers... too big to be a palm top, too small to be a laptop. :D

They are quite small in other words. Never could get it work right, but then the poor Aero I had was through a lot previuosly. They have the coolest floppy drives that plug into their PCMCIA port... loved the design, never could get that to work either. But the drive is somewhere around here still just because of how cool it was. :)

Hey Rory,

Gee, I did not know the portable 130XE was running on batteries. Cool.. Can you also use regular current for it? I will not be at the VCF. I am off, but I forgot that I had laready promised my wife I would go with her to a party that night. I inivitation came in early June. There will be others I hope. You guys, SCAT, had a great setup and you should all be proud of it.

UPDATES SINCE PREVIOUS POSTING:
2005.07.03 Shawn Jefferson, MyIDE Image Manager v2.1, MyIDE Config v1.1
2005.06.17 TAQUART updated
2005.06.17 added Marcin Lewandowski (Jaskier/Taquart) - TMC 2.0
2005.06.16 Raphael Espino, CpegView 0.1 (30May05) - color JPEG viewer
2005.06.16 added: AtariArchives.org (Kevin Savetz)
2005.06.01 removed Rich "Twist" Lawrence (former developer of Atari800Win)

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Active" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, should NOT be listed here.
```

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web address.

No email addresses are listed due to spam consequences.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the

information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

2970. Re: CPM for the atari ?

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-30 19:38:48 UTC
From: You <you@cogeco.ca>
Message-ID: <BF114F87.3A94%you@cogeco.ca>
Source record: 10527

I haven't turned my Atari system on for more than a year. Well, actually,
I did turn one briefly, a few months ago to test some ROM chips that I
shipped out.

>
> Then there's the question of how many people are running actual
> Atari 8-bit floppy disk drives nowadays? I am, but I'll have to
> admit I haven't turned my Atari system on for several months.

2972. Setting Up Atari Again

Newsgroup: comp.sys.atari.8bit
Date: 2005-07-30 20:04:33 UTC
From: You <you@cogeco.ca>
Message-ID: <BF115591.3A9A%you@cogeco.ca>
Source record: 10529

Well, it looks as though I will be setting up my 8-bit Atari again this weekend. I miss playing with the little critters.

Atari Basic was my first true love. The things we used to do together sometimes brings a tear to my eye as I recall the days when computers were fun. Not so anymore; computers don't have that same aura of intrigue that they once had. At least not for me.

Who sits down in front of their Mac, PC, or Linux box, boots up the OS and tinkers with computer languages just to have software to run on their computers today? Not many.

Could you imagine what modern computer magazines would be like if they came with type-in program listings? They'd be books!

When I had my ST, there was a paint program for it that I really liked called "Neochrome". I've never seen anything like that program on the Mac or the PC. I'm not at all grapically inclined, but I would spend hours playing with Neochrome.

In high school a friend and I set out to develop a game for the ST called, Elevator Music. Most of the graphics were created with NeoChrome and we were using the STOS programming environment for the code. I really wish that we had been able to finish that, but sh*t happens, right?

Anyway, ciao...

I had always wanted an Indus drive for my 8-bit. The sleek black case, the seven-segment LED displays that showed information like track count, the little flip lid over the drive slot, all were things of beauty to the truly inspired computer geek.

I never did manage to scrounge up the coveted Indus drive for my Atari 800XLs. In many respects, the Indus drives were much like sasquatch or any other creature of lore; a few people had claimed to have seen them in these parts, some even had pictures to prove it, but no one had ever managed to bag the beast.

I did manage to procure an old Rana 1000 drive for my 800XL many years back. This drive had many of the same features as the Indus drive albeit without the slick black case, flip cover, and stealthy design. Regardless, the Rana drive was a truly inspired piece of technology at the time. It offered true double-density, something that every Atari branded disk drive lacked, and the front panel displays were a computer geeks dream come true.

The USDoubler upgrade for the Atari 1050 disk drive was the first and only upgrade to have ever graced the innards of my Atari drive. Finally, true double density on my 1050 had become a reality and the UlraSpeed sector skew, made possible with SpartaDos, made the 1050 really fly.

Ah, those were the days...

At least offer a correction with your criticism. It isn't a phrase, but a
single word.
"Nonetheless" is a word meaning, "nothing taken away". I have noticed some
small
errors in term usage in your posts as well, not to mention your
"top-posting". :o)

Sorry, Bill and Greg, I guess I should have used a smiley in that message. It wasn't my intent to point out the error in spelling, just the redundant usage. It was meant to be a joke, something along the lines of: Today's messages brought to you by the word 'non-the-less'.

Although, in my defense, you will probably note from my various posts that I'm not yet up to speed on ascii smiley usage. I'm getting there though. :-)

I have always said that my Atari 8-bit days were the best in computer experience I have ever had. I actually wish we could all go back and do it again.

>Who sits down in front of their Mac, PC, or Linux box, boots up the OS and
>tinkers with computer languages just to have software to run on their
>computers today? Not many.

I started to tinker in Atari Basic and only wrote one program. It was small, but I was a little pround of myself. It was a menu program that I used to load in programs that were on a disk. I hated to have to type in the program name all the time. It was great to experiment just to see what happens. You are correct, no too much of this happens these days.

>Could you imagine what modern computer magazines would be like if they came
>with type-in program listings? They'd be books!

Yeah, even some of the best programs listed in the old Antic magazine seemed like books, but they were worth it when it was all typed in. Of course I found the more I typed in the programs, the more I learned about the language.

>When I had my ST, there was a paint program for it that I really liked
>called "Neochrome". I've never seen anything like that program on the Mac

Yes, I still have that program. Great piece of work. I used it along with Degas Elite, also which I still have.

>In high school a friend and I set out to develop a game for the ST called,
>Elevator Music. Most of the graphics were created with NeoChrome and we

>that we had been able to finish that, but sh*t happens, right?

Yeah I bought STOS and a lot of other programs to help program, but I never got into it like I thought I would Too bad, but maybe someday I will start it up again.

FamilyNet Newsgate

I laughed on the mention of the current magazines being books if they had
programs in them. That is too true. Most cases they only list sample code
or partial code if they ever do. Most codes you get are cheat codes.

So what kind of setup did you setup? :)

I think I remember Neochrome for the ST. It is amazing what I remember from
the year or so I collected and worked with ST's. :) As it is of course O
don't remember much. Had to much fun getting my Atari ST on the internet.

I wrote many programs for my Atari 800XL. I don't know how many 5.25"
floppy disks I have laying around, but I'd hazard to guess that I have at
least 25 to thirty disks filled with nothing but Atari Basic code that I
conjured from the depths on those warm and hazy summer nights.

I'm not saying that any of my code was particularly good, I'm just saying
that there was an abundance of it.

A friend of mine once made an attempt at starting a small business selling
Atari 8-bit public domain software and I wrote the code for his disk-based
catalog. If you have ever been involved with a user group that received a
copy of the SnoSoft Public Domain catalog, you will have had experience with
one of my early Atari programming projects.

Cheers,
William

Source record: 10539

Hi Mike,

> SECTION TWO: SPECIAL CHARACTERS
> ==============================
> 127 7F DEL ETB home plate R pennant Deleted
> 155 9B EOL RETURN box, etc. Atascii end of line
> (only at end of paragraphs or last column for data)
> 13,10 EOL ENTER ^M^J IBM end of line
> (at end of every 80-column screen line)
> 13 EOL ENTER ^M (or ^M and null) Unix end of line

Correction here: The *ix code used for "end of line" is LF, hex 0x0A,
decimal 10. 13 aka CR is (or has been) used by the old MacOs versions.
Given that MacOs X and above are built on top of a *ix style operating system,
I would believe that they also use LF now.

Greetings,
Thomas

2983. atari++ 1.43 available

Newsgroup: comp.sys.atari.8bit
Date: 2005-08-01 15:49:27 UTC
From: Thomas Richter <thor@mersenne.math.tu-berlin.de>
Message-ID: <dclga7$274$1@mamenchi.zrz.TU-Berlin.DE>
Source record: 10540

Hi folks,

please find a new release of the Atari 8-bit emulator for Linux
and win32 on my web page on its usual location:

http://www.math.tu-berlin.de/~thor/atari++/

What's new in this release?

- Too many people complained about sound problems; the main
problem was a DC offset in the pokey output that too easily
causes trouble with some sound cards and amplifies. This
release fixes this issue by an (optional) high-pass filter.
- The 1.43 release integrates a new optional host-system
based RS-232 (R:) handler that does not require the usual
HANDLERS.SYS bootstrap code, but can be patched into the Os
to begin with. Note that you still need to enable the 850
interface box to use it. The old bootstrapping code remains
available for backwards compatibility.
- Keyboard emulation did not check for the pokey keyboard
disable bit.
- The emulation of the Atari/InverseVideo key was broken.
1.43 fixes this.

So long,
Thomas

2984. ATR \==\ ASCII table (was: 80 or 40 ...)

Newsgroup: comp.sys.atari.8bit
Date: 2005-08-01 15:54:22 UTC
From: Sid Pacman <8-bitter@atari.old.folks.home>
Message-ID: <Pine.GSO.4.61.0508011115150.16679@furyy1>
Source record: 10541

On Fri, 29 Jul 2005 at 20:28 -0500, Michael Current scribbled:
->David Moeser produced this nice translation table.
->Piotr Fusik corrected the description of Atari character 5.

Thanks for the mention. I wish I had time to do stuff like that
nowadays! <grin> As for ATR char 5....

-> DECIMAL ATARI IBM <----> ATARI ASCII
-> -HEX NAME KEY GRAPHICS CHARACTER FUNCTION
-> ======= ==== === ====================== ========
-> 5 05 ENQ ^E club (9:30) Enquiry

....I looked up my original text and yes, it said 8:30, not 9:30.
While I'll admit that "9:30" as a description may meet with more
popular favor, I would quibble with both. On an old-fashioned,
"analog" clock (round-faced, with hands pointing to numbers), both
8:30 and 9:30 are "wrong" since the hour hand points to the area
in between the two numbers when the minute hand reaches the half-
hour mark. Neither one is precisely accurate. Both are compromises
in one direction or the other.

Perhaps the reason I used 8:30 was to more clearly differentiate
it from Atari character 125, which might be called "10:30." When I
used that character back in the days of Atari Basic programming, I
had always whimsically referred to it as the "left-turn arrow."
The position of clock hands at 9:30 could also be used to describe
a left-turn traffic sign.

In any case, any corrections are welcome.

On Sat, 30 Jul 2005 at 16:23 -0400, "You" scribbled:
->... all were things of beauty to the truly inspired computer geek.

You deserve a nomination for poet laureate of the Atari world!
<grin> Actually, the things you mentioned, the built-in true double density, and above all a reputation for quality, caused my computer mentor and me to go with the Indus as our first floppy drives in early 1984. That was in spite of the high price: US$350 at that time, which would be equivalent to almost US$700 in today's money if adjusted for inflation.

->I never did manage to scrounge up the coveted Indus drive for my
->Atari 800XLs.

I don't know where you're at but I would say that back in the glory days of the '80s Induses were fairly easily found at computer shows, Atari computer club auctions or sales, and of course at all the computer stores that sold Atari hardware. In the '90s used Induses could still be found at hamfests and computer shows and at those events that still existed within the Atari community.

->I'm curious as to the story behind your signature tag.

Oh, you mean "Censornati"? <ha-ha> Back in '95 some wag plant-
ed a sign saying that alongside the interstate highway near down-
town. That was back in the days when our longtime resident crusading
sheriff-and-prosecutor-and-sometime-judge raided and closed down the
biggest local computer bulletin board sysop, who was accused of hav-
ing nine "adult" computer files available for downloading out of some
70,000 files stored on his BBS. Driving that BBS out of business was
the last great victory for our caped crusader, after an illustrious
career of decades of keeping Censornati "squeaky-clean" of any adult
bookstores, video stores, movies, or even stage shows. There was just
one slight problem for the caped crusader: the internet took off like
a rocket at the same time he crushed that BBS, and so with the wide-
spread availability and pervasiveness of smut now having become ubi-
quitous, the whole issue became moot. But I try to do my best to
see that the Censornati name lives on. <grin>

On Mon, 1 Aug 2005 at 08:06 -0000, Thomas Richter scribbled:
->Correction here: The *ix code used for "end of line" is LF, hex
->0x0A, decimal 10. 13 aka CR is (or has been) used by the old MacOs
->versions. Given that MacOs X and above are built on top of a *ix
->style operating system, I would believe that they also use LF now.

I think the reason I put that description into the table was be-
cause of user experience in the Unix environment, where I probably
found that ^M (ASCII 13) by itself worked best to produce the re-
sult that on the Atari 8-bit was produced by ATASCII 155. But I'll
take your word for it.

110 baud? I didn't start using a modem until 1200baud became fashionable. Not that I know anything about fashion, but damn, that Atari SX212 was a mighty fine looking piece of equipment. It seemed out of place with my 800XL, 1010, and 1050 disk drive though. When I got the XMM801 printer for my birthday, the SX212 modem seemed to fit right in.

Not long after I was granted printing abilities by virtue of the Atari XMM801 dot matrix printer, it became evident to my parents that the SX212 modem would have to go. The SX212 modem was just too slow and phonecalls to Detroit were just too expensive; there was no long distance carrier competition in Canada at the time and no boards that supported Atari 8-bits locally.

Always one to recognize a blessing in disguise, I soon realized that I could print up the documentation for the heaps of files I had downloaded from various Michigan based Atari bulletin boards and begin really using that software. I fiddled with the idea of setting up my own BBS but I would have no luck in getting my parents to sponsor a second phoneline installation at the homestead. In an ironic twist, I managed to sell my modem to a local person that I met on a local BBS and we remain friends to this very day.

I've seen many friends come and go over the years, but of those for which I still count upon as friends, they were all met in the days of Atari 8-bit computing.

I live in the armpit of Ontario. It's a small city in the southwestern tip on the Canada/USA border called Sarnia. It's largely an industrial town and is fairly well known for its petrochemical industry. Many major oil companies have refineries in or around Sarnia including: Exxon/Mobil (Imperial Oil), Shell, Suncor, etc.

In the eighties, Sarnia was Commie central. Anybody that used 8-bit computers in these parts, used either the Commodore 64 or Commodore 128. The Apple II was not as prevalent and the Atari was even less so. Since I was a teenager too young to drive and too poor pay for transportation, the Indus drive was very much out of reach.

The drives to be had in this town were the Atari 1050's because a rather large Canadian department store (Woolco) carried them. My original 800XL and 1010 Data Recorder were purchased from another retailer that has long since moved on, Consumers Distributing. My Atarii XMM801 Printer was purchased from a small local shop that goes by the name of The Computer Terminal. The Computer Terminal was the only local retailer that carried Atari software and magazines such as Antic, Analog, and Atari Explorer. The

Computer Terminal, I believe, is still in business, but they do not carry
Atari merchandise any longer, as you might imagine.

2992. Re: tagline (was: CPM for the atari)

Newsgroup: comp.sys.atari.8bit
Date: 2005-08-01 23:13:40 UTC
From: You <you@cogeco.ca>
Message-ID: <BF1424E4.3B8A%you@cogeco.ca>
Source record: 10449

I sometimes get accused of "trying to clean up the town" for having spoken against a local radio station.

Anyway, this local radio station somehow became synonymous with rock and roll and everything affiliated with, associated with, condoned by, or resented by rock music. How this came to be the case, I'll never know. After all, it's a small radio station in a hick town that probably wouldn't know what rock and roll was if it bit them on the nose.

I guess this idea that I was trying to clean up the town comes from the fact that I used CAB codes in my efforts against this radio station. CAB, for those who don't know, is the Canadian Association of Broadcasters and all three of the local radio stations are members.

To make a long story short, since I made the absurd suggestion that a CAB member station should adhere to the codes established by CAB, and by extension of their membership, this local radio station, I was imposing my will on this station. Unfortunately, to say that I was imposing my will on this station is tantamount to suggesting that I impose my will on a government by expecting them to abide by laws that they themselves established. The argument of this radio station is really quite absurd.

Interesting point to note: My big driving force was to secure choice and possibly even gain some competition in this market. Was this a rational pursuit in a market where all three local radio stations are owned and operated by the same company? Blackburn Radio Inc. says, "No!" Blackburn Radio Inc., the owners of Sarnia's three radio stations, maintain that there is competition and choice in the Sarnia market despite the fact that there are absolutely no local radio stations that aren't owned by Blackburn Radio Inc.

Fast forward a couple of years and consider the Windsor market. There are four radio stations in Windsor, Ontario and all four are owned and operated by one company. This time, the owner of the radio stations is CHUM group.

Bea-Ver Communications, now wholly owned by Blackburn Radio Inc., sets up shop in Windsor, Ontario. What is their rationale for wanting to setup shop in Windsor? They claim that because the four radio stations in Windsor are owned by the same company, the residents of Windsor have no choice in the stations that they listen to. Essentially, they argued that there was no competition in the Windsor market and that Blackburn's entry there would provide much needed competition and choice for Windsor residents.

Sound screwed up? It is! They essentially validated the same argument that I had made a couple of years prior! Man, radio station operators are stupid!!!

I sit here and wonder when Blackburn Radio Inc., is going to allow
competition in the Sarnia market, the Chatham market, and the Wingham
market? All three of those markets have three radio stations each, and in
all three markets, the radio stations are owned and operated by the same
company: Blackburn Radio Inc.

Don't even get me started on their "Repatriation" mission! I apologize for
the rant, but I needed to get that off my chest!

Cheers,
William

The 130XE portable was very cool, and my money says you could fit two of
the three R/C cells unde the hood of the machine. The show was pretty
interesting. I didn't get there in time for the speakers, but I did
enjoy the exhibits. Lots of cool stuff on display - I think I was
mostly interested in the Sinclairs, since those are machines I have zero
knowledge of and since one was extremely rare while one was extremely
modded. There was plenty of stuff I have never seen before, including a
good number of kits, at least 3 exhibits featuring ST machines, and the
"table o' clones" made for some nice conversation.

As for stuff up for sale, there was a huge pile of Sun and DEC
workstations along with some RS/6000 and 370 machines, most things going
for $5 or $10. Some people got some great deals on the mostly free
hardware tables nearby. Of course, there were a couple more tables of
random stuff, one of which supplied my only buy of the day: a $5 Kaypro
16. The hard drive isn't exactly cooperating, but it's otherwise in
great condition, plus it's a cool piece of history in my book. Only
problem was lugging that "portable" back to my car in the parking
garage. Anyone know where I can get a replacement 10 MB Winchester? :)

Anyway, thought I'd put my 2 cents in about the show. Hope to see more
stuff coming to the Indianapolis area in the future. Hint, hint to you
organizers out there...

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

2997. THE disassembler to use?

Newsgroup: comp.sys.atari.8bit
Date: 2005-08-03 06:14:56 UTC
From: Slor <slor@comcast.net>
Message-ID: <Xns96A7CB54AFAEemuslor@216.196.97.136>
Source record: 10454

I'm trying to find a good disassembler to use in looking at a couple 8-bit binaries. I have tried a couple based on other posts I saw, but neither seems to give me what I'm looking for. DIS6502 seems to spit out invalid opcodes and undefined memory addresses (then again, perhaps I'm using it incorrectly), and Rom File Designer looks to be more oriented to binary editing. Anyone have a favorite disassembly tool to point me towards?

thanks

IMO for most programs you will need some kind of tracer instead of a disassembly dump. I mostly used Omnimon but DDT would be good too if you have the time to learn how to use it.

The problem you run into most often with a disassembler is it will try to do things like convert a modified character set into code. For me the first step in any disassembly is to find out where there is data vs. code and where the tables/data starts and ends. It is sometimes helpful to look at a straight dump of the binary to find the embedded text for instance. There are several ways it could be in there, ASCII that goes through CIO, NULL terminated strings from C compilers, 128 added to the first character to flag end of text, leading number i.e. '5thing'.

Some of the stuff like data tables will be a little tougher. Usually they start with some initialization, indirect index, decrement, and a loop. i.e.

```
LDX #9
loop
LDA $4000,X
STA $600,X
DEX
BNE loop
```

In something like this you can see either code or data that starts at $4009 down is being relocated to page 6.

Once you get all the data start and finish locations you can have the disassembler work around them.

Indeed. I used to use an x86 disassembler called Bubble back in the day.
it would give you an initial disassembly of your exe making best guesses
what was code and what was data, then you could interactively point it to
which areas should be which. That made it really nice to use. If there
was something like that for the 6502 (preferably something I could actually
run on my DOS/Win box to do the disassembly), it would be perfectly suited
to my needs.

Ooh - I just looked back at Bubble Chamber to remind myself how cool it
was, and I found that the x86 opcode mappings and such are all in an
external text-based data file. That means, if I was so inclined, I should
be able to generate such a file for the 6502 mnemonics and go from there.
Not only will that help me with disassembly, but I'll probably learn the
language better as I'm folling with trying to get the disassembly correct.
I may even be able to do something with the standard equates.

Now, a second question that would help me with this: what is the most
complete/accurate reference for the 6502 instruction set? I have,or at
least have access to, a wide variety of references for this, but I know
sometimes they're not entirely accurate. What's our favorite? :)

I seem to recall near the end of its life Antic Magazine had a cover
disk bonus disassembler that was good. I can't remember all the reasons
I didn't use it at the time, maybe it was disk based or something. You
may want to take a quick look and see if you can find it.

I am probably alone in the world on this but my favorite book was "6502
Assembly Language Subroutines" by Lance A. Leventhal and Winthrop
Saville. The other books were good but went into processor internals. I
just wanted something that had a lot of practical examples of how to use
the instructions to do something useful.

My favorite Atari-based disassembler was/is the "Ultra Disassembler" by
Ralph Jones (Adventure International). Two strong points: it would
re-create pseudo-source code that could be re-assembled, and it came
with a very good manual that pointed out many of the tricks/pitfalls of
disassembly. For Q&D disassembly (and hacking), you can't beat
Omnimon. In fact, Omnimon is just plain superb! (ok, IMO anyway.)

DIS6502 is nice but you have to use the ATASCII display and seperate
the data/code/graphics sections yourself. After you mark each section
as data/code/etc it will re-disassemble the file.

Cool - I just started working with it and actually did not realize you could do that. Unlike what I've seen with 8086 disassemblers, would it be expected to spit out uncompilable code if those sections have not been identified?

For the most part you should be able to re-assemble the output, even
if its full of odd 'code'. Unknown opcodes will just end up as .data bytes.

Just make sure the output format is set for your assembler. I have
no problem getting it to spit out TASM compatible files.

Hi all.

AFAIK, the Atari used the same keyboard legending for the US and the UK market.

Were there any other variants?

I know there was a French SECAM model, and I presume they had an AZERTY keyboard and a modified look-up table in ROM.

Any others? German and Spanish for example?

Hi

I've investigated on the c.s.a8 archives and found out I can replace my XL OS with the 400/800 OS. I have a 800XL and have both PAL and NTSC binary file versions of the 400/800 OS. I have burnt an EPROM with the NTSC version of the 400/800 OS, and another one with the PAL version of the 400/800 OS. On both cases, I used a 27128 EPROM.

Next I opened my 800XL, took off the original XL OS and replaced it with the NTSC 400/800 OS. Turned on my XL, but nothing happens, all I got is a black screen. Tried the PAL version, but I got the same result. Put on back the XL OS, and I get READY on the screen.

Am I doing something wrong here?

Apart from the firmware, you need the right PAL/NTSC ANTIC or GTIA.

If neither version works, I suspect the firmware is not right.

Perhaps you have an XL BASIC trying to talk to an 800XL OS that is not the
same as an 800 OS ROM.

> keyboard and a modified look-up table in ROM.

> Any others? German and Spanish for example?

Well, the german version also used the US keyboard layout (i.e. QWERTY
and not QWERTZ), the Os is identical. To get the timing straight, it
checked for the model and initialized the timing tables accordingly,
thus only one Os.

It differed in so far as the video chips were modified to generate a
PAL signal and not an NTSC signal. Since the video frequency is
different, the base frequency of the system is a tiny little bit
different, and there's a PAL version of ANTIC and GTIA in the system.
The most notable difference, as far as the internals are concerned, is
that there is a second oscillator that runs at 5/4th the main clock
speed that drives the color generation for GTIA. This has to be done
since the PAL color encoding differs from the NTSC color encoding;
specifically, the color carrier is not a sub-harmonic of the
pixel-frequency. (Which is one of the reasons why PAL colors are more
immune against distortion than the NTSC TV system). The TV modulator
is, due to that, of course also different. Anyhow, I don't think you
would be able to tell from the outside.

So long,
Thomas

i think that the french secam models has QWERTY keyboards just like
all the others - i have one XEGS system coming from france and it's
keyboard is regular.

the only different XE system i heard about is the arabic version of
65XE. the changes was in the keyboard (arabic letters) as well as in
the ROM of the machine (editor was right-to-left, the charset had been
changed).

Despite any hardware problems, i.e. you should check whether the Os
arrived in the ROM correctly and the chip layout fits, there are a couple
of weak points in what you're doing:

a) The PIA is routed differently in the XL systems. Specifically, its
port B is connected to the memory management unit instead to the third and
forth joystick. Which means that the PIA is initialized improperly for the XL
hardware by the Os/A ROM. Port B is an input on Os/A, but has to be an
output port for the XL hardware. This *might* be no problem because open
TTL inputs - and the controller pins of the MMU are then open because they
are connected to another input - typically read a one and not a zero, and
this corresponds to the memory mapping of "Os enabled, basic disabled", so
it works well in the initial reset phase. However, during coldstart, the
Os/A initializes PIA (and all other chips) by writing zeros in all registers.
To keep it short: During a short while the PIA pins become outputs, output
zeros and pull the Os disable pin of the MMU low. Which means that the Os
will go away in the middle of the coldstart routine of the Os. Well, "this
ain't work", clearly.

b) The timing between the US (NTSC) and PAL versions are different. The XL
Os checks for the chips, and initializes the timings accordingly. This might
not be a major problem and shouldn't prevent booting.

c) RESET is routed differently. For the XL, the reset button goes really to
the reset pin of the CPU, for the first series, it goes to the NMI input
pin of Antic. The Os/A then detects this interrupt and jumps into the
warmstart vector of the Os. Thus, pressing reset on an XL system with an Os/A
rom installed will run a coldstart of the system, not a warmstart.

If I may make a suggestion: "Don't do that". There are good software versions
available that load a (mildy patched) verison of the Os/A into the RAM under
the Os ROM. 'mildy patched' in so far that the PIA initialization that
mangles the Port-B setup is stripped off and replaced by a couple of NOPs.
If you really want to do that, you need to patch the Os accordingly to
make it working on the XL system. It won't work unpatched.

> One thing I noticed is that the blank screen is exactly the same one
> when I boot the XL without any OS...

Yes, and for the same reason: The Os goes away. Or rather, it pulls the rug under its own feet in the middle of the bootstrap code. (-;

So long,
Thomas

Sounds like they used the one layout for all except the Arabic version.

UK/German ones used PAL, French used SECAM.

However, it would not be to hard to implement a different keyboard layout,
only the look-up tables would need changing I guess.

> PAL..

> immune against distortion than the NTSC TV system).

IIRC the NTSC used a single 4xNTSC colour carrier crystal (14.318... MHz).
This was 8 x the CPU cycle rate of 1.789,772,72 MHz.
Usually quoted as 1.79 MHz.

The CPU rate on the PAL systems was usually quoted as 1.77 MHz.
I'd always assumed this to be 1.773,447,5 MHz, which is one tenth of a 4xPAL
colour carrier crystal (17,734,475 MHz).

However my late-model 800XL has two crystals as you said:
Y1 = 14.875576 MHz Video timing crystal
Y2 = 14.18758 MHz (3.2*PAL colour)

I'm guessing Y2 went to a PLL to be multiplied by 5 and divided by 4 to get
the 4xPAL colour carrier.

The reasons for the frequency of Y1 are a mystery:
it has no obvious ratio with the PAL carrier or NTSC.
Multiplied by 5 and divided by 42 would get 1.7709019... MHz.

Perhaps they should have just stuck with the 4xNTSC crystal for the CPU
timing.

What is the real PAL Atari CPU cycle rate?

> Y2 = 14.18758 MHz (3.2*PAL colour)

D'oh! My mistake.

I think I misread the crystal legends.

I think the exactly correct values should be:
Y1 = 14.18758 MHz (3.2*PAL colour)
Y2 = 4.43361875 MHz (1 *PAL colour)

The two values above based on
4 * PAL colour carrier being 17.734475 MHz

No. By writing all zeros, they remain as input.

You are right about the coldstart issue, you can't get a warmstart by
pressing the reset button. And you obviously, cannot enable/disable basic
with the Option key. But they are minor problems. The OS unpatched should
work.

His problem, I believe, is he is putting the old 10k OS at the start of
the 16K eprom, and he should put it at the end.

(Reposted just in case)

Hi

I think Jorge has got a point here.
I use a software called the EPROM3 for burning the EPROM. Take a look:

http://img.photobucket.com/albums/v660/lbaeza/Other/eprom3.jpg

As you can see, this software puts the contents of the 400/800 OS
binary file at the beginning of the buffer. I'm pretty sure there must
be an option within the software that could let me put the contents of
the binary file wherever I want within the buffer...

Any ideas what's this option?

Regards

PS: By the other hand, does it work if I fill with zeroes the beginning
of the binary file, so that the content of the 400/800 OS stays at the
end of the 16KB file?

3030. Online Atari Magazines

I've been looking for some online archives of old Atari Magazines that are no longer in print or available by any other means. Specifically, I'm looking for an article by Dave Small that was published in the December93/January 94 issue of "Current Notes".

The article was titled, Small's Second Law, and it is about the chaotic nature of data storage and the universe we live in. If anybody knows where I might be able to find an online copy of this article, I'd be most grateful.

Thanks,
William

Update

I have burnt an EPROM with a 16K binary file. This binary file has the
first 6K filled with FF, and the remaining 10K is the 400/800 OS. I
placed this EPROM into the XL and voila! ATARI MEMO PAD on my XL!
The problem is, after 5 seconds, I start to get garbage on the screen.
Worse, I put back the original XL OS and the computer refuses to
launch. It seems it's dead :-(
Anyway, looks like Jorge was right, the 400/800 OS must be at the end
of the EPROM...

Thanks everybody for helping me out with this issue.

->hint to you organizers out there...

Uh, where were you from the late '80s to the mid-'90s? There WAS
an annual Atari computer show in Indianapolis for almost a decade.
I was at several of them, including the final show in 1997. About
100 people attended that year, which I thought was fairly good tho
not spectacular. It also didn't have the same flavor as in previous
years when there were abundant displays by vendors selling various
kinds of new stuff. The organizers labeled attendance as adequate
but they refused to organize the show again. They publicized that
show as the final one in the series, saying they wanted to end the
series while it was still successful rather than have it trail off
in a downward spiral.

Since then the Columbus, Ohio, swapmeet has been the only mainly-
Atari, annual event I've seen announced here on this 8-bit newsgroup,
and which has continued to be held every year. This year's holding
is coming up next month, on September 10.

Up for auction is my original ATARI VIDEO MUSIC that I purchased in the late 1970s. I bought this from a stereo shop in Denver for parties. The undulating patterns passified most the stoners who didn't want to get up off the sofa and mingle or dance. It can be truly mezmerizing. You hook up your music to the TV and patterns formed to the beat and volume of the music! This has been sitting in my closet since the early 80's and is in nice overall shape. This item is has been tested and works perfectly. I do not have the RF adapter (Cord out of unit is an RCA jack which puts out an RF signal, not video. Needs to do RCA- RF screw-in connection into cable or TV input) which you can buy on eBay or at your local RadioShack!

I'm including the original glossy manual which is stapled together at the upper corner.

Hi

I'm impressed on how long did the XL last. You see, this was the machine where I made a lot of experiments. First tried a MYIDE internal setup: to accomplish this, I had to desolder the XL OS, install a socket, and place the MYIDE OS internal version. After all this desoldering I thought the machine didn't survive. But it did! Next I soldered my MYIDE setup inside the XL, but with no success. Later I discovered I didn't solder the cables to the CPU, but to a chip next to the CPU. After all this mess, the machine *still* survived!. Finally I went on all this OS exchange issue: desoldered the BASIC chip, switched OS's, and when finally it looked like it worked, the machine died.

I'm really impressed on how robust old hardware is. They don't do machines like that anymore...

Regards

PS: I think I learned a lot with this machine. It was worth it.

Of course its easier, but its not the same.

Some programs dont run with the Atari Translator, or any other software based translator. You can't use the translator with most cartridges, which is what he wanted to do. And besides, it is much better to have a translator in Rom than booting one from disk.

->I'm really impressed on how robust old hardware is.

When I got my first Atari 400 my computer mentor said, "There's nothing you can do to mess it up." No matter how much you might "mess it up" via keyboard inputs, all you had to do was turn it off and on again and it would be as good as new.

Compare that with how far we've progressed with computers in the last 25 years: with Windoze the OS is struggling from the first moment to get out from under its own intrinsic mess; if you're lucky, it may run in spite of everything Microsoft has spent years and years messing up; but if you mess it up or some hacker halfway around the globe writes a good worm or virus, you start feeling you'd have been better off staying with the good ol' Atari 8-bit.

->They don't do machines like that anymore...

You can say that again.

->PS: I think I learned a lot with this machine. It was worth it.

Think of all the spare parts you've gained. <grin>

How many people will be attending this year? I haven't gone for a couple
of years just because the $4 to get in seems a little steep for how
small the show is.

Anyone here going? Bringing anything cool?

BTW, here's the website:
http://www.angelfire.com/oh4/acec/acecswapmeet.html

But it goes to a good cause. :) I doubt ACEC has many other
forms of income to keep the club going.

> Anyone here going? Bringing anything cool?

I'm going to head down for sure, hopefully to buy plenty of
cool stuff myself. :) The last time I was there a woman had two
nice condition ST notebooks and I'm still kicking myself for not
picking one up.

You mean she had -2- of the ST Book? Wow, thats impressive, considering
how hard it is just to find one...

Are you going to show anything (MyIDE+Flash or USB Cart)? If I had
more time I'd love to show off some of my stuff (including my ST
Book) but it's at a bad time for me in September. Maybe I'll have
to re-think it this year...

I have a few issues of Current Notes, but not the ones you need.

I remember Dave sending them to me free along with some 8-bit software
that was fairly new at the time. I exchanged a few letters with him and
he has a great knowledge of Atari.

It would be nice to see Current Notes up on the Web or at least
Daves' stuff.

Also, gotta mention Ben Poehland The 8-bit Alchemist!

I just picked up a used atari 800 and I'm wondering how much memory it has? Is there a way to run a basic command to tell? I opened it up and examined the slots, all are in use with unmarked boards full of chips. Any help is appreciated.

Thanks,
Skrim

? peek(88)+peek(89)*256 will tell you how much memory is available for
user programs.

8KB (8192 bytes) are used by the BASIC cartridge. 960 bytes are used
for screen memory.

The maximum normal memory for an 800 is 48 KB, 49,152 bytes.

The BASIC instruction above should yield 40,000 for available memory
for a 48K machine. That's 49,152 minus 8192 minus 960 equals 40,000.

Genuine Atari 400/800 memory boards were originally wrapped in shell
which had makings as to their size. Even bare Atari boards had
markings on one edge, either "8K" or "16K". You'd have to take these
out to see the markings.

If you have third party memory boards you could possibly have a
RAMDISK. The above test would not tell you whether you have one or
not. Not sure how you could tell that short of taking the boards out
of the system and examining them.

I have a dozen or so bare 32K Atari ram boards if anyone needs one.
Guess I could build a few if you want one and can't solder. I am told
though that they may need some modification to work, as they are 3rd
party boards.

PEEK(89)+(256*PEEK(89)) is $9C40 or 40,000, the bottom of
screen memory or $A000 - $3C0 (960 bytes of GRAPHICS 0, under
the BASIC cart, the display list is maybe 30 bytes under screen memory.
Since you're doing PEEKs, you would be better to use FRE(0).
? FRE(0).
This will give you about 33294 if you have 48K, and I guess 8192
less for each 8K less you have. I would guess, since all your slots
are full, that you have the front 10K ROM, then 3*16K cards, for 48K.

No, I Stephen is right. If you have less than 48K memory,
you will have a lower bottom of screen memory. Sorry.

Still looking for a Magnavox Professional RGB Monitor that has
the LIN RGB (ST-Falcon connection), TTL RGB, VCR Button, and
RCA jacks for connecting an Atari 8-bit.

These were also made in another name or two such as Philips RGB.

I will consider a broken one with a bad tube as my tube is fine.

Contact me if ya have something that may work.

And no I'm not spending $150.00 plus at BRAVO Computers.

Thanks,
phantomm@bellsouth.net

If it runs as a standalone memory board in an 800 then it should run in
a 400.

If it needs the support of a genuine Atari memory board then it won't
work as the 400 has only one memory slot.

Wasn't there a Mosaic 32K board for the 400? Are your boards based on
this design?

If it runs as a standalone memory board in an 800 then it should run in
a 400.

If it needs the support of a genuine Atari memory board then it won't
work as the 400 has only one memory slot.

Wasn't there a Mosaic 32K board for the 400? Are your boards based on
this design?

These are Microtek AMB-32 boards. I was informed by Best Electronics that
they are 32K boards. They have 16 memory chips, I assume 4116, which I can
still get and have quite a few used ones. Bradley also tells me that they
may need
some type of modification for them to work at all. I will build one and
throw it in
our 400 and see.

Unknown, and I plan to build one just to be sure they will work.
I assume with 16 ram spots that they use 4116's, which would
yield 16 x 2K or 32K. I will let you know. Would anyone like
to test the theory of more than 48K, I will send you a bare board,
you can build, test and let us know. Not worried about cost, just
pay me $2 postage. I had to eat these anyway, and I have about
a dozen of them here. I'm keeping a couple for me. Thanks.

Perhaps THE reason I still have a ST of any type, and why I did not buy a falcon 040 when given the chance was based on the Spectre GCR, Dave Small's invention, which I have a website up on.

I think he was the icon of the fun programer on the ST, and his books were a blast to read. I sometimes read the Spectre manual, not even having a ST going with the GCR, but just to read the books.

I got rid of many of my copies of Current Notes, but kept the ones that had Dave Small in them. :) Would like to copy those articles and get them posted.

Well, as I learned recently, you could open MyDos, create a ramdisk, format it, and then try writing things to it. If they stay, you at least have that much memory.

I'm no expert but wasn't 52K the max for Atari 800 for normal memory.
Needed a RAMROD board for this I think and at fair expense just to get
that last 4K above 48K.

There were Axlon type RAMDISKs which could add bank selectable memory
but those would have been bigger than 32K I should think.

I suppose at it's worth a try.

Off topic:

Has anyone in this group ever built the 800 Plus 256K mod (see below)?
If so what software can use it?

Not as linear addressed RAM. The scoop for your 800 goes something like this. It has been a long time so I may have some details off.

The 800 has 4 slots. One of the slots must have the OS board in it and at least one of the other 3 slots has to be memory.

The standard memory boards from Atari were 8k or 16k. I don't think there were a lot of 8k boards around as they were obsolete the day they were introduced. There was a Mosaic board with 32k and Axlon came out with 128k and I think 256k. The advantage of the Mosaic board was you were able to expand your memory to the full 48k and have a free slot. Several outfits like Bit-3 made things like 80 column displays that would work in the free slot. The Axlon boards allowed you to run software that used the extra RAM as a RAM disk as well as freeing up a slot.

Source record: 10389
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

Well, it was probably my fault. I tried to run a program on a 1040STE
that was for
High Res only. After booting I lost all power to the monitor.
The Fuse did not blow. And when connected to the power, I get a humming
and
sometimes a faint whistle. near the transformer. To me, that means some
Caps are
blown. Or another componet. But on that side, there are mostly Caps and
diodes.

If I had one with a bad tube, the power supply part along with the front
power switch
will slide out of the monitor. A Cable has to be un plugged and a ground
wire cut.
But thats about it. I plan on replacing the Caps and see if that helps,
but my time
is limited until school starts.

I also bought a like new Mag 80 RGB exactly like the PRO model but
doesn't
have the LIN RGB ST-Falcon port on the back. It has the place for it.
But no
circuitry for it. Everything else is exactly the same except for the Lin
RGB Port.

I Have wondered if the TTL RGB port would work on a ST-Falcon if a cable
could be
made. Does anyone know?

The ports are very similar, both round, but number of Pins are
different. AFAIK the TTL RGB is
for a PC RGB connection. Or maybe an Amiga connection.

I have 2 TTL RGB cables, but no ends for the ST Computer Monitor Port.
One end of the cable looks similar to a 9pin Serial port connector. The
other is round and
connects to the TTL RGB Monitor Port.

The Mag Pro is a excellent monitor. Would buy a working one if price is
right, or bad one
if I can make use of it. Also may trade, Have lots of Atari Stuff.

If someone knows of a similar ST-Falcon RGB monitor that will also allow
an 8-bit Atari to be
connected at the same time. Let me know the make and model.

3085. TWAUG Newsletters

Newsgroup: comp.sys.atari.8bit
Date: 2005-08-09 03:48:47 UTC
From: Phantom <phantomm@bellsouth.net>
Message-ID: <5HVJe.1020$Kp.307@bignews6.bellsouth.net>
Source record: 10392

Anyone fimilar with the Twaug Newsletters for the Atari 8-bit?

There were at least 18 issues with Disks. I was wondering if they
went beyond issue 18.

The Years were from 1993 to 1995.

Issue 18 was the last issue I got and it was dedicated to David Ewens,
who was a founding member and passed away.

He was a great guy and sent me the mags for Free.
I remember exchanging letters with him before, I got on the Net.

These are some of the best Atari 8-bit newsletters I have ever seen.

Full of tips, hints, projects and etc.

I think I have all the disks, but am missing the paper issues #1 and #2
and would
like to have for my collection.

The newsletters are like fold over books.

Anyone want to trade/sell ?

Hi,

Was 28 there last issue if ya know?

And do your images include the full Newsletters?

I enjoyed the disks, but for me the info in the Newsletters was great!

Anyway to download them?

E-mail me if ya want to talk in private

3090. icd / fte products *LEGAL ANNOUNCEMENT*

Newsgroup: comp.sys.atari.8bit
Date: 2005-08-09 17:00:04 UTC
From: *ProteanThread* <rtdos@rtdos.com>
Message-ID: <1123606804.720492.237620@o13g2000cwo.googlegroups.com>
Source record: 10397

ya know, i just realized that you both (Lance and Steve) are right, sorta: lance may have and own fte products but so far he's not mentioned that this included icd products. am i correct? my gosh, i can't get over the the similarities between this and sco / linux. going back through the history, sco (like lance / bob) bought the source code from novell (like mike hohman) but nothing, nothing between them states that this included the copyrights. lance seems to think that because he got the source code he got the rights because mike never paid bob and blah blah blah. he may have gotten the source code for fte stuff, but this did not include copyrights or any sort of agreement which included the copyrights (you simply can't take them from mike because mike didn't pay bob) nor did it include any icd stuff.

I AM ANNOUNCING TO THE GROUP / LIST: I will take apart, reverse engineer, and use any and all icd products (excludiing FTe products) I can in and within my rtdos alt os project (if and whenever it gets off the ground). If Lance wants to stop me then he will need to provide clear proof that he owns the copyrights and not just the source code. He has 30 days to reply and respond (publicly) in a manner that is suitable, legal, and acceptable for this group / list. He has 30 days to provide me as well as all of us that he clearly owns the copyrights and not just the source code. If he or Bob do NOT respond within the next 30 days with clear legal proof that Lance owns the copyrights to all of icd and or fte proucts and these rights WERE signed over to Bob Klaas and or Lance Rhenquist by Mike Hohman then I will take that as an understanding that no such legal agreement and or documentation exists and will continue forth with my rtdos alt os project. Any such action (legal or otherwise) either Bob Klaas or Lance Rhenquist take after the 30 days has passed will be null and void as per this public announcement.

My mailing address for any legal action is:
Jeff Wood
1013 West 28 Street
Cheyenne, Wyoming 82001

And, yes, this also applies to Steve Carden and Mr. Ames (tho I have no use for REAL.DOS at this time, any agreement we may do or may not do regarding REAL.DOS and rtdos will be made public; Just covering my rear here, Steve)

Hey Dude, Go For It.

Make us some cool 8-bit stuff.

BTW, do you have any info on the 80column adapter for the
1meg MIO? I have a 1 meg MIO with the Video port.

I heard rumors in the past that a few were made. Or at least
some type of proto type exists. Anyone have a pic or doc about it?

Also, does anyone know if the Video port can be used for anything
as is?
If not, what about a second modem port or something?

From: Christian Hedemann <hedini@gmx.de>
Message-ID: <42fa6f18$1_1@news.isis.de>
Source record: 10405

Hi,

I bought an Atari 600XL some weeks ago on a fleamarket and it seems like
the computer's out of order... can someone help me finding the defect part?

The symptoms are that when I power it up, the red LED on the keyboard
turns on and for about a second the screen has a brown-like color - then
it's black again.
It doesn't matter if I use the HF- oder monitor-output, it's always the
same... the red LED turns on, stays on, short brown screen and then black.

I already pulled out all ICs and put them back in their sockets.

Bye,
Christian

Could be any number of things.

Electrolytic caps dry out over time, and EPROMs fade (though Atari used
masked ROMs which do not fade).

You'll have to do some probing, see what signals seem active and which do
not.

Probably not too helpful, but if you could get some A8 ICs, pull the
big ones and put in a known good one. Figure out which are the
RAM chips, a bad one might be hotter than the others. Try holding
down the OPTION silver key at power on, this will disable BASIC
and maybe you'll see a blue screen. Then there's purchasing a
logic probe, which won't do you much good unless you have a working
600XL to compare with. I think your power is OK, as the red LED
comes on, should be 5 volts at the power adapter. I guess this is
a PAL 600XL, so things may be a little different from a NTSC one.
Finally, maybe get a 800XL, it is a more useful computer, the 16K
600XL can just about only run cartridges. Good luck.
Russg
get a correct BLUE screen

I was just thinking about it for the past couple of weeks. I haven't looked at the algorithms for creating the puzzles, but I don't think it would be hard.

Maybe I'll get bored and see what I can do...

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari, based in Sunnyvale,
California, USA, produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

I was pretty sure the Axlon appeared as 32k just like the Mosaic +
whatever else was in there banked.

I remember having problems with both a Mosaic and Axlon board plugged in
anyway: I think I fried at least one of the boards when I tried this.
That is an Axlon with a 16k board gives 48k, frees a slot and gives a
ramdisk, a Mosaic with a 16k ram board gives 48k and frees a slot, and
an Axlon with a Mosaic invites disaster.

> If not, are there any converters to make them CMC compatible?

Sure ! Such a program exist and its name is Unsap :) Unsap has been written by
Fox, author of Numen - the best ever Atari 8bit demo.
Unsap is a Perl Script. If you are using M$ Windows u need to install Active
Perl before use.
Important note: SAPMAKER (http://asma.atari.org/) made sap files can only be
converted by Unsap to their original format (cmc, mpt, etc.).

Here is an URL to Unsap: http://atariarea.histeria.pl/pliki.php?sec=show&id=413
U have to be registered to download the file ! ->
http://atariarea.histeria.pl/forum/register.php

Best regards,

Simply because the 800 OS uses the memory area $D800-$FFFF. OTOH
the XL OS is 16k and uses memory $C000-$FFFF (the part from $D000-$D7FF
contains the selftest and is mapped to $5000-$57FF if the selftest
is enabled).

so long,

Hias

Sure, it is because of the basic design of the microprocessor. When it is first powered up or reset it starts execution in the $FFxx memory area. It was just a design decision, other processors may start execution from $0000 for example.

Since you have to use a ROM in the high memory area it is easiest to just use a commonly available ROM. That is, you wouldn't want to put in a 256 byte ROM at $FF00-$FFFF and add a 8k<or 16k> ROMs somewhere else. Keeps your part count down and simplifies decoding.

Likewise the 6502 always puts its stack on page one and page zero is a special place for fast executing code. This dictates you have RAM starting at $0000.

Okay, what can I do for further analysis?

...I am no electrican, but a trained system-electrician (=if it doesn't
work, change the board. If that won't work, change the whole system).
^_^; So the most useful tool in this case I possess and learned to use
would be a multimeter...

My hope was that:
- it would be a well-known problem (since the screen shows a brown-like
color for a second and the power-LED is on - at least it's not
completely dead)
- or that someone could tell me what to check and which values are
expected there
- or that someone could tell me "Hey, buy an Atari 'dunnowhat' since
most of the chips are compatible", because then I wouldn't have to wait
for decades until a cheap Atari 600XL would turn up on eBay.de.

Maybe someone even knows a good source for replacement parts besides
buying a whole system at eBay?

Bye,
Christian

Blue screen doesn't turn up: brown color and then black.

> Then there's purchasing a logic probe, which won't do you much good
> unless you have a working 600XL to compare with.
Hm, I never used a logic probe or an oszilloscope and I haven't got a
working 600XL to compare with, too. ^_^;
Next week I've got the chance to get an 800XL, but I guess that one
wouldn't help me, right?

> I guess this is a PAL 600XL, so things may be a little different from

:-)
I wanted to get a 130XE first, but when I saw this "bargain"(?) for 12
Euro including an Atari 1010, four original games and six books about
programming at the fleamarket, I couldn't resist.
And I've got enough time to spend some hours trying to revive an old
computer from the dead...

Bye,
Christian

Sorry, A8= 8-bit Atari, XLs, XEs, 400, 800, XEGS, all are 8-bits because they use 8-bit code, 16-bit address.

> > Try holding down the OPTION silver key at power on, this will disable

OK, probably not valid anyway (the BASIC chip may still be bad.)

> > Then there's purchasing a logic probe, which won't do you much good

NO!, a working 800XL would be very helpful. It is unlikely tho that the chips would be socketed, which apparently your 600XL is.
You really don't want to be desoldering un-socketed chips, but socketed ones, if carefully done, preferably with a IC puller, but could use a screwdriver.
Even if the chips aren't socketed, you might get an idea using a logic probe,
probably about 10 or 15 Euros. There are schematics that have the High, Low, Pulse for all the pins of the Large ICs (40 pins, and maybe the small ones too). The chips in the 800XL are the same for both, just in different places, you can tell what is what by the numbers on the chips.
eg. CO14806 for the CPU, probably CO12296 or CO21697 for Antic, CO14805 for GTIA, CO12294 for Pokey, maybe CO60302 for BASIC, CO61598 for OS, etc. I think I'm right here. Your PAL Antic and GTIA are definitely going to be different, PAL Antic=CO21698 PAL GTIA=CO14889. (Looking up a bunch of IC codes....)
Of course, make sure the 800XL works. Sorry, I got lost.

Right, I hate to lose an Atari also, it is worth it to try to salvage one.
You could use your multimeter to check the main power lines (Vcc).
Probably just one of those large chips is bad, and I agree with
Kryten, the CPU would probably be the first to try to swap in.
Good Luck.

I usually do not post my eBay auctions but I though this one might be interesting for some folks on the newsgroup. It is the 1050 Duplicator by Duplicating Technologies. It was designed to be a hardware disk copying solution but it sounds like it was more successful as a disk accelerator due to its larger sector buffer. I have the original box, the add in board, two revisions of the manual and two versions of the software. It does not appear to have been used. I planned on using it to back up my 8-bit software collection but now realize I will probably never get around to it.

First thing to do in non-blue XL/XE screen situation is to use that multi-meter to verify that you have exactly 5 volts coming from the power supply. Then check the voltage with the computer turned on, it should still be exactly 5 volts. Best way to do that is with the cover and RF shield off. Power supplies going bad are the most common thing wrong.

Because of the above you then need to check for over-voltaged ram chip damage by testing which one(s) are uncomfortably too hot to touch with the computer turned on. 4416 is the base number for the 600XL ram chips and you only have two (16K machine after all), mine say TMS4416-15NL for example. You might try the same test on all the chips if no ram chips are found to be very hot and your voltage is perfect. B&C may have a 'pack' of 40 pin chips to use for substitution testing or am I thinking of the long defunct Techno-vision? At any rate, subbing out the big chips is your only real hope short of an EE degree AND a scope if you get this far and haven't found a problem.

The good news is that the 600XL makes a good source of 40 pin parts for the 64K 800XL and 130K 130XE? Look for B&C in the Vendors list in the message titled 'Welcome to comp.sys.8bit' - That message is the group's FAQ and will have current contact information for Atari vendors.

3124. Fixing 1050 drives

One other thing. I said check the main power places, I think called
the Vcc. One of these places would be where you would attach the
clip on a logic probe.
I think you could see the power sources in the schematics for the 600XL
(PAL, I'm pretty sure) at:
http://www.dereatari.republika.pl/schematy.htm

Note that all the diagrams are zipped PCX, and my PC doesn't handle that
image format. I can convert them into PNG (which uses less space than the
zipped PCX!) for anyone else who cannot read PCX.

I converted a few circuits for the kit I have:
http://homepage.ntlworld.com/kryten_droid/Atari/800XL/Atari_circuits.htm

> should still be exactly 5 volts.
Without an Atari connected the power supply has an output of 5.95V.
With an Atari connected to it, it goes down to 5.65V.

When checking the power supply, I saw that pin 6 had a loose contact
(sometimes 0V and sometimes 4.xV) and changed the plug. It didn't help.

> Because of the above you then need to check for over-voltaged ram chip
> damage by testing which one(s) are uncomfortably too hot to touch with
> the computer turned on.
I checked the temperatures of all chips when the 600XL was turned on for
about 20 minutes. They ranged from "cold as room temperature" up to 41ï¿½C
(U2) but most are somewhere between 30ï¿½C and 35ï¿½C.

Bye,
Christian

I'm pretty sure that I am outing myself as a newbie to this now... ;-)
Okay, err... what's a logic probe? I saw those things in a catalogue,
but I have got no clue what to measure with them and... hmm, what they
"do" or how to use them. :-)
...even the shopkeeper of the electronics shop in town (where I bought
my plug for the power supply) couldn't tell me what a logic probe is. ^_^;

Then... I read the schematics and checked the main power places (the
number on the line outside of the rectangle is the number of the leg,
right?).
I only got voltages of about 5V to about 7V between vcc and vss, except
for one IC: U15 (74LS375N) with less than 1V... somewhere around 0.3V.

Bye,
Christian

And thanks for the hint that the 800XL has soldered ICs. :-)

Ahh, a logic probe is a pen like device that you connect to a 5V source with the wire that comes from it and it is a pen-like device that usually has a LED and a metal pointer that you touch a point on a pin or trace on the computer mother board. It will give an audible sound, one of three sounds, a low sound, a high sound or a pulsing sound for the low-high-pulse state of the point you're testing. In conjunction with a schematic that has the 'logic' H L P of points on it, you might be able to find a point that isn't right and figure out a problem. The Schematics that are at the site I mentioned don't have these 'notes' as to the logic of pins and points on the schematic. I have a 130XE schematic that does have these points. Actually, I'm not sure I ever accomplished anything with my logic probe. Except maybe by going back and forth between a working and non-working mother board. ie. I guess the logic probe wouldn't help much.

Replacing the chips
is the most likely way to fix it. And I don't know if the 800XL in question has sockets or not, your seller probably doesn't know because you'd have to open it up and take the RF shield off to see the chips. I think theres a fairly good chance the PAL 800XL has sockets, only because your 600XL has them. Maybe Andreas or one of the other Euro-A8ers could say.

> Then... I read the schematics and checked the main power places (the
> number on the line outside of the rectangle is the number of the leg,
> right?).
I'm not sure what rectangle you're talking about, a big rectangle is the chip, with pin numbers. I think most power ponts are a small circle with +5 at them. Small rectangles are resistors with the numbers for the Ohms. The +5v power points will have +5A or +5E, the letter representing the source of the power, which you can see in one of the schematics that has the power supply jack and on-off switch.
> I only got voltages of about 5V to about 7V between vcc and vss, except
> for one IC: U15 (74LS375N) with less than 1V... somewhere around 0.3V.

>
> Bye,
> Christian
>
> And thanks for the hint that the 800XL has soldered ICs. :-)
It may or may not have sockets. But if you can verify that it works,
you'd have a working computer. The pins on the Large Scale Integrated
circuits, the 40 pin ICs should have just about the same logics on
the 600XL and 800XL.

Getting ahead of the game, the next thing you'll need is a SIO2PC
or APE cable to access the 1000s of programs available. Use
your PC with a serial cable as a disk drive.

Another thing you might need.
The numbers for the pins on the schematic goes like this.

u
1 40
2 39
3 38
4 37
etc.

Looking down on the chip, with the 'u' meaning the notch, I think
the notch is always to the left as you look down on the mother board.
My example is a 40 pin chip, but smaller chips have the same idea.
Start at 1 go away from the notch, then up the other side of the chip.

Hmm, I think mine was 5.5V (10% high, erring on the safe side).

> I only got voltages of about 5V to about 7V between vcc and vss,

Are you sure your meter is okay?

If your PSU is driving 5V into the machine, you should not be seeing 7V
anywhere (assuming there is no step-up converter inside!).

Most computer logic chips expect VCC to be 5V +/- 5% or 10%.

So 7V sounds seriously unhealthy and I would not leave it switched on for
any length of time.

Swapping chips around would only destroy more chips...

> one IC: U15 (74LS375N) with less than 1V... somewhere around 0.3V.

That's definitely wrong.

Are you sure you got the right pins?

XL BASIC is written very cleanly (legal calls only) so it should work
without problems on an 800 OS. Easy to check it out using an emulator.

The 800 OS most probably zeroes out the PORTB register during startup,
thus making the 800XL hardware to switch off the OS ROMs.

> with the Option key. But they are minor problems. The OS unpatched should
> work.

PIA ports are programmed as output by default, i.e. after power up. The
OS zeroes I/O registers starting at minor addresses and proceeding
towards higher addresses. So it first zeroes $D300, then $D301, and
after that there's no next instruction to execute, because the XL
hardware switched these addresses to RAM (bit 0 is cleared = no ROM).

The XL OS does pretty the same thing, but first it zeroes the PBCTL
register. This prevents the bad thing from happening, because after that
the PORTB is in the data-direction-register mode and its changes don't
affect MMU state.

The unpatched 800 OS does not have any chance to startup on XL hardware.
I don't see a reason why anyone could want to use that anyways.

K.

The 12V supply is the most frequent fault. Atari used a voltage doubler and the diodes in the middle of the BIG capacitors come loose from thermal shock/over heating.

There are a few other things that are likely. The 1050 should have the drive busy light come on everytime you close the door latch.

What you should try is having the drive on, a disk in it, and hooked up to the computer. Turn on the computer and see if you get an abnormal boot noise like a screech. If it gives an abnormal noise then at least the computer and drive are trying to talk to each other. If it doesn't make a difference with or w/o a drive then you have something seriously wrong like a bad disk controller chip.

No, they are input in the power-up or reset state. This is described in the datasheet, and it's the normal behavior for every I/O port chip that I know. If the default state of any data port would be output, then it might provoke all kind of damage including short circuit if the design is to be an input.

> The
>OS zeroes I/O registers starting at minor addresses and proceeding
>towards higher addresses. So it first zeroes $D300, then $D301, and
>after that there's no next instruction to execute, because the XL
>hardware switched these addresses to RAM (bit 0 is cleared = no ROM).

This is completely harmless because (as explained above) the ports are programmed as input. Furthermore, it is actually a NOP operation because all PIA registers are zeroed automatically on reset.

>The XL OS does pretty the same thing, but first it zeroes the PBCTL
>register.

Again, PBCTL, as all other PIA registers are already zero after reset.

> The unpatched 800 OS does not have any chance to startup on XL hardware.

If you would have read the whole thread you would have see that the original poster did run successfully the 800 os in XL hardware. He got the memo pad. The reason that it wasnt working for him before is because he put the OS in the wrong EPROM location.

> I don't see a reason why anyone could want to use that anyways.

To have a translator in hardware, that's the reason.

Ya could always brute-force it. There was a cool Crosswords puzzle creator
for the Atari that was published in a Compute! book or something somewhere.
I'm sure it was at least slightly more intelligent than anything I'd code
for creating crosswords, but it seemed to try until it gave up.
"I can't make a puzzle out of these words!"

I think it was in BASIC with machine code bits for doing the hard stuff.

...I can't figure out how to make the gumballs come out faster.

I can get past the first two levels but on the third level even if I catch every gumball correctly I simply can't collect enough gumballs throughout the "day" to meet quota.

I remember being able to speed up the machine, but I've pressed every joystick button and every keyboard one as well and can't speed up the machine to save my life.

Does anyone remember how?

Thanks...

Thanks Sid. When switched on the power light comes on. Everything else has no effect. Opening and closing the gate, inserting and removing disks and attaching and booting to an Atari have no effect. At no point does the drive attempt to spin, illuminate its busy light or move the heads. The Atari never recognises an attached device regardless of the position of its device switches. It just remains silent and still.

In fact if it wasn't for the power light the first thing I would have checked would have been the plug!

If the power doubler diodes have failed would the power light still illuminate or does it take it's juice from after the power doubler?

Thanks again everyone!

Hello All,

I currently have a variety of Atari cables as 'buy-it-now' on eBay as
follows:

* Atari to SCART 1.5m - 3.50pounds
* Atari to RCA (2 audio lines) 2.0m - 2.99pounds
* Atari to RCA (single audio) gold-plated 1.0m - 2.00pounds

All prices are excluding shipping.

I can ship to the UK, Europe, US/Canada, and Australia/NZ.

Full information is available on each listing, which can all be found at:

http://search.ebay.co.uk/_W0QQsassZdeangarraghty

Hi Dan,

I'm currently reviving a german forth called "VolksForth". This Forth runs on 68k CPU (Atari ST), Z80 CP/M (Amstrad etc), 8086 (MS-DOS) and 6502 (C64, C16, Plus4 ...)

This Forth is based on Forth 83 Standard. Is includes fairly modern things like heap memory management, multitasking and a file interface.

I'm porting the 6502 Version over to Atari 8bit. It's curretly running, but the fileinterface needs to be done.

There will also be new versions for Apple II, Apple 1, Commodore PET and maybe VC20.

Also currenlty the 200+ pages handbook is only in german language. This has to be translated into english.

Ciao

Carsten
